Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Terry Phelan

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Therese DeBing

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Wendy Holzman

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

William Briggs

Dear Haaland,

I'm very proud to be an American in the historic moment of your confirmation as Secretary of the Interior. I spend a great deal of time exploring and enjoying our wild public lands and I'm excited to have your voice in the Cabinet. I'm very concerned about the impact of climate change on our shared environment. I'm an advocate for a transition to a green economy, part of which would include ending the era of fossil fuels, especially on our public lands.

So I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

William Osmer

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling, and fracking, and mining companies for coal mining.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end. These lands were not set aside irresponsible companies to ruin. They make a large toxic mess, take their profits, and then leave the mess for the government to clean up at the taxpayer's expense. which conceals the true, very high, price of fossil fuels.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Winke Self

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Zafar Sayed

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Veronica Sousa

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Victoria Khazzam

Dear Haaland,

I am writing because I value our public lands and waters.

I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

They should be left for the people to use.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It is the number one problem of the climate change.

It disrupts wildlife, harms people and communities, and it's devastating public lands. Plus, the people always end up paying to clean up their pollution due to and caused by their greed of doing everything as cheap as possible. It has become cheaper for the companies to pay the fines than to clean up their pollution.

In order to combat the climate crisis, we must stop the extraction and burning of methane created from this type of extraction. This requires taking a stand against the oil and gas industry directly. Even if they keep putting cash into our politicians pockets through their campaign funds that should be returned to their states or the federal government if they are not used for their campaigns.

Instead of making our politicians millionaires.

If we extract fossil fuels from the ground — it should be limited and extremely well regulated. We should not be allowing State and Federal lands to be auctioned off at \$2.00 an acre and then never following up on the amount of release from the gas not burned, or the carbon monoxide being released through the burning, of the methane.

Put a halt to further drilling and fracking on public lands.

The inherent danger of fracking and the problems with our lack of knowledge and oversight about fracking means, that no set of regulations can ever make it safe for public health or the environment.

Please, we are melting the North Pole and causing increase drought, then deluge in our rainfall, changing the height and consolidation of our clouds, changing the course of our jet stream and our under sea current in the Atlantic.

The travesty, tragedy, of wildfires, no water, no Florida, no coastal land, and mass extinction

is very great, and may be very close.

With the reduction of methane into the atmosphere we will have more time to work on reducing carbon emissions.

Please. Please,

Halt the mass fracking that we continue to do.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Virginia Bottorff

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Do not allow our public lands to become polluted and the beauty destroyed. I worked as a roustabout one summer in West Texas oil fields to help pay for college. It is a dirty business and once the oil gets into the water table so much for getting it out of our drinking water. Fracking is totally different from what they did back in the late 60's. I think it is probably more dangerous and pollutes our environment. The chemicals are not divulged, but I am sure it is hydraulic fluid being used today since it is a non-compressible fluid which can take tremendous pressure to break up rock formations. Anyway if allowed our beautiful public lands will be destroyed as a result of having all that heavy equipment needing roads to operate. In addition, actual well bore site will leave a permanent scar on the land for years.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Wanda Ballentine

Dear Haaland,

I am writing because I value our public lands and waters, as I know you do. I am proud you are our Secretary. That public lands have been given over to oil companies for gas and oil drilling and fracking is appalling, especially as many of these areas are sacred, like Bears Ears.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, especially children. It's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Thank you for all you are doing; it is deeply appreciated.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Anja Phenix

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Ann McCabe

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Anna Siftar

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end

Big corporations have no place on public lands. Except, of course, for MONEY, MONEY, MONEY. It's a crime, and it will destroy our beautiful planet!

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Anne Nelson

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Anthony Ferranto

Dear Haaland,

the older i get ,the more i find myself (along with many other concerned americans) having to constantly keep an eye on our juvenile infantile leaders who think they are grown up enough to make good decisions for our well being and the health of our people and planet. but as i age i find these students of life need to be cut out of the decision making process as their choices have brought our planet and all of its inhabitants to their knees with desperation for a clean common sense fix of the way things are done in this country. we must therefore treat the ruling class as we would our own infant children and instill in them the reasons why survival and sustainability are the root strengths needed to bring a brighter future to this earth.

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Ariel Gold

Dear Haaland,

I am writing to express my concern for our public lands.

The swelling crowds at our National Parks, since even before the COVID-19 pandemic, have made it clear that we need to expand public lands. The overwhelming desire Americans have to see the outdoors has created a conservation nightmare in our iconic National Park system: overflowing trash bins, extensive erosion, even unburied human feces. We need to do everything we can to maintain and expand access to America's natural resources without endangering the opportunity for future generations to enjoy them.

The history of American land is complicated and tainted by its theft from indigenous people. Today, public lands are still estranged from Americans through extractive capitalism and privatization. In order to combat the climate crisis and prevent the wanton destruction of America's renewable natural beauty, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Avis Deck

Dear Haaland,

First of all, I am so very, very thrilled that you are our nation's Secretary of the Department of the Interior, and thank you for your service to our country. To that end, I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Amy Wolfberg

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Andrea Jordan

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Andy Florio

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Bert Morris

Dear Haaland,

I am writing because I value our public lands and waters and I am scared! I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking. I spent time with several Elders before the pandemic came to us. We camped and walked and prayed in Chaco. This amazing place, as you know, is threatened by fracking nearby. Many of our sacred places are being threatened by the greed for oil. Pipelines run through our land, poisoning our water.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Bette Wilson

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Beverly Clark

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Blaine Wimberly

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Bonnie Arbuckle

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Brandon Wheelock

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Brian Baltin

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Bridgett Heinly

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Bruce von Alten

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Barbara Manildi

Dear Haaland,

I am writing because I have always strongly valued our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

I began traveling by car in every area of the U.S. at the age of 2 years. (75 years ago) and enjoy the beauty of our country.

A company wanted to FRACK on my northwest Ohio farmland promising an unrealistic amount of money or nothing! In one nanosecond I said NO!!!! Fracking could destroy some of my crop land and endanger the families who live in the area!

Our country needs to use our collective brain and put much more effort into renewable, green energy!!

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Barbara Seaman

Dear Haaland,

I am writing because I value our public lands and waters. Public lands should be protected from development or the poisons that fracking and drilling produce. The ground water sustains life and should never be contaminated by man or business. It is unthinkable that big business should profit from spoiling our protected natural beauty.

I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Barb Morrison

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

B Masters

Dear Haaland,

Urgent. Existential Threat.

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Carol Steinsapir

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Cam Matthews

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking. Also how the supposed federally protected Wild Horses are also an illegal casualty hidden by a corrupt and dangerous BLM. The Horses are messengers of this shadowed agenda and as they are set for hidden genocide and removed from their territories...oil and cattle replace them and other essential species sacred to our lands. Please do not ignore the Horse Medicine calling for true balance and care.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Cami Hays

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Catherine France

Dear Haaland,

I am hopeful that you will protect our public lands. We have already damaged our home so much, we need to switch to healing the earth. Fossil fuels are the past, not the future. I would support using some public lands for solar and wind energy generation; obviously not in situations where the installation would damage an already fragile ecosystem. I believe renewable energy combined with regenerative organic agriculture [as championed by the farmers and scientists of the Real Organic Project] can provide a solid start in healing the damage we have done.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Charles Coddington

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

First, congratulations on becoming the Secretary of the Interior! I wish you all the success you can handle and then some in enhancing protections for our public lands and in closing down the leasing of such lands for oil and gas extractions and in stopping fracking. The federal government has been giving away the leases for decades and decades.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

We must keep fossil fuels in the ground if we hope to have any chance of stopping the increasing carbonization of our atmosphere and halting the progression of climate changes for the worst on our planet.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Cheryl Eichner

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Chris Mclean

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Christie Sanders

Dear Haaland,

I live in Southern California. For the past few years, as you know, California has seen record-breaking heat waves, and fires. These are direct results of the heating, caused by the emissions generated by extracting and burning fossil fuels. Both heat and fire are heading in a terrifying and deadly direction if we do not act to halt emissions immediately.

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.
