Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Elin Guthrie

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Fernando Robles

Dear Haaland,

Being from NM, we value our public lands and waters!! So we greatly disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking!

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. We were appalled, driving through the Permian Basin, at the amount of water consumption for fracking as well as the trailer villages with no playgrounds for kids. Fracking must end!!"

In order to combat the climate crisis, we must STOP the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Frances Young

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

There is not enough clean water for people or wildlife in western USA. The huge volumes of water needed for these harmful extraction processes become very polluted and unavailable for other uses including for native American communities and wildlife. The leasing income to the federal government is very small and not worth despoiling all of these public lands simply to subsidize big private corporate profits.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Fred Guida

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Georgia Braithwaite

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Haaland,

Because I value the continuing preservation of America's public lands and waters, I am alarmed just how our public lands have been gifted to oil companies for the the drilling of oil, gas, and more recently fracking.

Fracking for oil and gas remains unsafe, extreme, and dangerous even in the short term, while heightening long term concerns.

Fracking has already caused massive amounts of methane leakage, water contamination, air pollution, and even extraordinary earthquakes.

Fracking disrupts wildlife, harms people and communities, and it's devastating public lands.

It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

It is crucial to our collective future, that we commit to keep remaining fossil fuels in the ground — we must discontinue any further drilling and fracking on public lands. The inherent dangers of fracking means that no set of regulations can ever make it safe for public health or the environment both now and into a more hopeful future.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Gertie Richard

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Glen Taysom

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We need to be ramping down the use of fossil fuels. That means decreasing the amount that is currently being removed from the ground.

So rather than starting new developments and public lands we need to see the retirement of current production.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

First Nations peoples have suffered the loss of their lands and have been most affected by the environmental damage to the public lands.

Our public lands should be protected and not rented to the highest corporate bidder because they belonged originally to First Nations, are sacred to First Nations, and damage to them impacts directly upon First Nations. I also humbly add, as a Hispanic American, the public lands are a heritage for all other Americans. One that we need to cherish and protect, too.

Fracking for oil and gas will always be unsafe and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and earthquakes. It harms wildlife, people, communities, and the public lands. I support its end.

The extraction and burning of fossil fuels must end. I support your taking a direct stand against the oil and gas industry since no set of regulations can ever make it safe for the public or the environment's health.

Let me thank you for allowing me to express my support for the protection of our public lands and waters. God Bless.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Greg Black

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Gregory Pais

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Gail Findley

Dear Haaland,

Like most of my fellow Americans, I value our public lands and waters. And, also like citizens across our nation, I deplore how our public lands have been handed over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it is devastating our public lands. It must end, now!

As you surely know, to combat the climate crisis, we must stop extracting and burning fossil fuels. This requires taking a clear, public stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we simply cannot allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for the health of our families or our environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Additionally, these lands are owned by the American People. Routinely, these extractions on our lands are practically given away to these companies. As if that wasn't bad enough, they frequently do nothing to repair the damage. It's outrageous.

These lands are our birthright and the birthright of all who come after us. We need to stop these practices and protect these lands from the pillage.

Thank you.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Garret Hobart

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Gayla Cremin

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

George Latta

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new federal fossil fuel leasing and implement an orderly, managed decline of production.

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for states and communities that are economically dependent on and impacted by federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Nolan Raborn

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Orlando Velazquez

That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Pamela Grant

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Pamela Landon

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Pamela Leugers

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Pamela Leugers

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Pamela Leugers

The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Patricia Lucas

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Patricia Lucas

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Patricia Lucas

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Patricia Lucas

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Patricia Quinn

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Paul Garvin

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Paul Held

Subject: [EXTERNAL] Pause in leasing public lands for oil and gas
Date: Thursday, April 15, 2021 1:27:18 PM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Haaland,

I welcome President Biden's Executive Order calling for a "pause" in leasing our public lands for oil and gas extraction. However, it is not enough. Methane emissions from oil and gas operations drive climate change, a worldwide crisis that threatens health, safety, and life. Conventional pollutants from fracking poison the air, contribute to multiple diseases, and may increase susceptibility to our "other" crisis, COVID-19.

When multiple crises collide, strong steps are needed. Please take the next steps by making permanent your pause on oil and gas leases on public lands and waters, update the long-outdated Emergency Response Plan to include banning dispersants, fund baseline studies of human health, especially in children, in communities exposed to fossil fuel contamination, and expand community healthcare centers in underserved communities like Benndale, Mississippi.

Should you have any doubt about the toll of fossil fuels on people's health, please watch the film *The Cost of Silence* to see what's at stake in the decisions Interior makes. People around the Gulf of Mexico, especially in BIPOC communities, are still suffering debilitating and often fatal health consequences from the decade-old Deepwater Horizon disaster. BP has still not been held accountable.

We're counting on this administration to stand up to industry pressure, remedy historic and ongoing exposures, pollution, and illnesses, and protect communities from fossil fuels.

Thank you.

Kim Rickels

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Peachie Kobylk

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Peachie Kobylk

An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Peachie Kobylk

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Peachie Kobylk

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Perry Davis

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Perry Davis

To whom it may concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new federal fossil fuel leasing and implement an orderly, managed decline of production.

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for states and communities that are economically dependent on and impacted by federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Cheryl Bruner

This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Pierre Thompson

Subject: [EXTERNAL] Please - No more oil & gas leasing on OUR public lands and waters
Date: Thursday, April 8, 2021 10:11:20 PM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Haaland,

Congratulations. I am so ecstatic you will truly care for and treasure nature.

I am sorry you are tasked to explain that public land belonging to every citizen and is not there to be gutted or ruined or clear cut to build oil rigs, mines or fracking infrastructure. I know you understand that selling land, wildlife, sacred land, and water (under and above ground) to oil companies for gas and oil drilling and fracking is against everything you and most americans care about.

We must keep fossil fuels in the ground. We all must protect the land from corporate greed.

Thank you, and best wishes in your mission to protect public land.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Rosemarie Santiesteban

Subject: [EXTERNAL] PLEASE - No more oil & gas leasing on public lands and waters
Date: Thursday, April 8, 2021 6:40:15 PM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Cheryl Rigby

Subject: [EXTERNAL] Please End Federal Fossil Fuel Leasing
Date: Wednesday, April 7, 2021 4:28:44 PM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jennifer Sellers

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Leila Tawil

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Mike Angel

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Mark Gugliuzza

Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Ryan Colatosti

Dear US Department of Interior Oil and Gas Comments,

I love our nation's public lands and waters, and I love living in a world filled with birds, animals, and insects. As a runner, hiker, and swimmer, I rely on our nation's public lands and waters for solace and wonder. Fossil fuel development anywhere is a threat to life everywhere, and we need to keep these materials in the ground, so I ask that you terminate the federal oil and gas leasing program.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Barbara Taylor

It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Debbie Slack

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Heide Coppotelli

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Hal Forsen

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Jennifer Morris

Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Jeremy Houska

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Jill Mulato

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Joan Worrall

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

John Bucci

Dear US Department of Interior Oil and Gas Comments,

I am a frequent user of our public lands and waters: as a surfer, hiker, camper, and backcountry skier. Open access to robust, wild places is so important to our communities, I have personally found a lot of healing and growth in the ocean and in the wilderness, it has made me a better person and citizen and I have dedicated a lot of my time to making sure queer (like me) and bipoc Americans have access to our nation's incredible natural spaces. I work through grassroots networks as well as through an organization that I co-founded called Benny's Club, we work hard to make sure marginalized communities can get into the ocean and we collaborate with orgs that do the same in all outdoor spaces. But, this work that we do does nothing if our shorelines are coated in oil slick, if our fishstocks and coastal ecosystems are bearing the stress of offshore drilling, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

John Paladin

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

James Hollis

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions. This was something we all thought was limited to the republican party.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Josh Hill

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Judi Wilson

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Dear US Department of Interior Oil and Gas Comments,

Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling, in fact, by all except those who want to profit financially despite the need to replace fossil fuel with renewables.

Our existence and well-being, as well as that of our descendents, is threatened every time we expand our fossil fuel infrastructure, every time we treat action on our climate emergency as something to be put off for the future.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Julia Hughes

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

James Samis

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Jana Wiggins

Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Jason Carroll

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Jeanne Penvenne

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Jenna Gurka

It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Kyle Verblaauw

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Kathleen Salvemini

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Keith Ramsey

Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Kenneth Miller

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. Dear US Department of Interior Oil and Gas Comments,

Thank you for your past support of environmental protections. It continues to be a breath of fresh air to have a Representative who cares about social justice and environmental justice. I'm writing to urge you to support the termination of the federal oil and gas leasing program. Fossil fuel development is a destructive practice that threatens our environment and human (and animal) communities. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program. Thank you for your time.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

kristin smith
