Dear Secretary of the Interior Secretary Haaland,

I am writing this note to express my concern over the indefinite pause in new oil and natural gas leases on public lands and in waters and the Department of the Interior's Secretary's statement that the federal oil and gas leasing program is "fundamentally broken."

This pause in leasing and the negative rhetoric around the leasing program creates regulatory and economic uncertainty in my state and across the country. It also puts good-paying energy jobs and critical funding for our region at risk.

Why is it important to people like me? Nearly 25% of U.S. oil and 12% of U.S. natural gas is produced on federally owned land and waters.

Thus far, your constituents have sadly been left out of the process on a decision that could have major impacts on our local economies and jobs – at a time when we can least afford it.

Reducing production on federal lands and waters could eliminate jobs, negatively impact economic growth, increase household energy costs, and even increase emissions, in part by increasing the need for coal-powered electricity.

I hope you'll take my thoughts into consideration and support oil and gas leasing on federal lands and waters.

Dear Secretary of the Interior Secretary Haaland,

I am writing this note to express my concern over the indefinite pause in new oil and natural gas leases on public lands and in waters and the Department of the Interior's Secretary's statement that the federal oil and gas leasing program is "fundamentally broken."

This pause in leasing and the negative rhetoric around the leasing program creates regulatory and economic uncertainty in my state and across the country. It also puts good-paying energy jobs and critical funding for our region at risk.

Why is it important to people like me? Nearly 25% of U.S. oil and 12% of U.S. natural gas is produced on federally owned land and waters.

Thus far, your constituents have sadly been left out of the process on a decision that could have major impacts on our local economies and jobs – at a time when we can least afford it.

Reducing production on federal lands and waters could eliminate jobs, negatively impact economic growth, increase household energy costs, and even increase emissions, in part by increasing the need for coal-powered electricity.

I hope you'll take my thoughts into consideration and support oil and gas leasing on federal lands and waters.

From,  
gerald palmisano  
18 Cassaday Dr  
Carriere, MS 39426

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Leveda Troy

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Linda East

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Linda Morero

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Linda Nicholas

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Linda Nicholas

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Linda Nicholas

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Lisa Faulkner

That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Lois Vincent

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Lonnie Riggan

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Louis Capellari

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Louis Capellari

Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mal Heindel

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. To whom it may concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Margaret Courter

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Maria Tanasescu

If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mark Gretsch

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mark Langstraat

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Martha Adkins

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Martin Boyd

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Mary Ann Mann

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Mary Ann Mann

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mary Ann Mann

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mary Hicks

To whom it may concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Matt Barten

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Melody Payne

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Melvin Mc Reynolds

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Merna Bishop

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Michael Aus

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Michael Goodman

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Michael Jones

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Michael Williams

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Michael Williams

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Michael Williams

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Michael Williams

Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mickey Thomason

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Mike Hart

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Mike Hart

To whom it may concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mike Hart

Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mike Spencer

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. To whom it may concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mike Zavasnik

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Mona Rodriguez

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Mona Rodriguez

This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Monte Lane

To whom it may concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Morris Howard

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Morris Howard

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mr. Carlo L. Iasella

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mr. Chad Leaf

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Mr. Chris Conley

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Mr. Chris Conley

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mr. David Miller

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mr. Don W. Jester

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Mr. James & Lisa Hildesheim

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Mr. James & Lisa Hildesheim

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mr. James & Lisa Hildesheim

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mr. James & Lisa Hildesheim

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mr. John Lewis

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mr. John Vegetable

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mr. Michael Perez

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mr. Milo Hawkinson

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Mr. Richard C Trimble JR

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Mr. Richard C Trimble JR

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mr. Robert Wagner

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mr. Thomas Trexler

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mr. Wayne Hoover

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mrs. Christina Larson

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Mrs. Rebecca Kosbab

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Mrs. Sibyl Dyke

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Mrs. Sibyl Dyke

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Mrs. Sibyl Dyke

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Ms. Cynthia Chambers

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Ms. Darlee Eppinger

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Ms. Nancy Dingman

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Ms. Pat Blatzer

To whom it may concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Nalla Hansen

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Nanci Natale

If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Nancy Hilliard

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Nancy Langley

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Nancy we Wett

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Naomi Christensen

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Naomi Christensen

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Nicki Smith

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Mary Zieger

Dear Haaland,

I am writing because I value our public lands and waters. Fracking's linked by the U.S. Geological Survey with earthquakes and damage is FOREVER. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination to water tables created during the age of the dinosaurs and non-replaceable, air pollution and, as mentioned, earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I HIGHLY value our PRECIOUS, ICONIC public lands and waters. I OVERWHELMINGLY disapprove of how our public lands have been HEINOUSLY given over to VILE, DUPLICITOUS oil companies for gas and oil drilling and fracking.

SCIENCE HAS MADE IT PERFECTLY CLEAR THAT fracking for oil and gas is TOTALLY unsafe, extreme and dangerous. It causes massive amounts of CLIMATE DESTROYING methane leakage, water contamination, DEADLY air pollution and even earthquakes. It disrupts PRECIOUS wildlife, harms people and communities, and it's devastating public lands-LANDS OWNED BY THE AMERICAN PEOPLE. It MUST end IMMEDIATELY!

In order to combat the EVER-WORSENING climate crisis IN TIME, we must stop the DEADLY POISONOUS extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep ANY AND ALL REMAINING fossil fuels in the ground WHERE THEY BELONG—we can't allow any further VILE drilling and fracking on public lands. The inherent danger of fracking means that NO set of regulations can EVER make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Jean Farris

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Jordan Neiman

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Eric Volck

Dear Haaland,

Congratulations on your historic appointment as Secretary of the Interior. I am writing because, like you, I value our public lands and waters. I disapprove of how they have been given over to oil companies for gas and oil drilling and fracking.

Fracking is dangerous on many levels. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly, by keeping fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. No set of regulations can ever make fracking safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

David Vayo

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking. This type of oil extraction worries me the most for the people who live where this happens. It is time to protect our lands and move towards renewable energy for everything.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

Dear Haaland,

Congratulations on your confirmation as Secretary of Interior. I am a retired employee and Park Superintendent with the National Park Service and have high hopes for great things during your tenure.

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

It is my understanding that the United States is not energy independent. Therefore, we must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Hugh Gurney  
2270 Hickory Circle Dr  
Howell MI, 48855-6411

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Geoffrey Mazullo  
147 Court Street  
Haverhill NH, 03765-5403

I doubt that you will read this, but here's my "two cents' worth":

Have you explored alternate means of providing energy? Wind, water, wood and geothermal come to mind! PLEASE consider your response to this matter. A concerned citizen, taxpayer, and yes, a voter! David E. Beaver

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Valerie Koeber  
315 west fifth st  
Wayne NE, 68787-1811

Dear Haaland,

I value our public lands and waters, and I disapprove of how our public lands have been turned over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is extremely unsafe, endangering wildlife, humans, and our planet's climate. It leaks massive amounts of methane, contaminates the water, pollutes the air, and even causes earthquakes. It disrupts wildlife and their habitats, harms people and their communities, and devastates public lands and pollutes the waters. Then, when the extracted fuel is burned, it releases greenhouse gases, accelerating climate disruption. Ending this will require taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground—including not allowing any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Amy Fass  
330 Haven Av.  
New York NY, 10033-5300

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters, and sacred Indigenous lands, as I know you do. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking—essentially for free whilst they make huge profits.

As you know, fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

We value our public lands and waters and disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Rebecca and Greg Durr  
2703 Riverview Dr.  
Aberdeen WA, 98520-1548

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment. Thank you.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Allie Palmer

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sister Mary Schmuck RSM  
101 Mercy Dr.  
Belmont NC, 28012-2898

Dear Haaland,

As you, I value our public lands and waters. I completely disapprove of how our public lands have been handed over to oil companies for destructive and highly polluting gas and oil drilling and fracking.

It is clear that fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of toxic and polluting methane leakage, water contamination, air pollution and even earthquakes. It endangers and disrupts wildlife, harms human health and communities, and it is devastating our public lands.

It must end.

The majority of Americans know that In order to combat the climate crisis, we must stop the extraction and burning of all fossil fuels. This requires standing firm and changing our formerly imbalanced, government relationship with the oil and gas industry directly.

Americans know that we must stop using energy sources that harm life as it fosters toxic pollution. We are ready to make the changes needed to ultimately keep fossil fuels in the ground — we must not allow any further drilling and fracking on our protected public lands. The ongoing, inherent danger of fracking makes it clear that no set of regulations can or will ever make it safe with regard to public health or our shared environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Judy Lukasiewicz

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking. We must change the mandate from extraction management to preservation and protection of our public lands and resources and stop the extraction faction. Importantly this includes an immediate ban on prescribed burns that are a fraud upon the people. Prescribed burns do not prevent forest fires, they exacerbate global warming and climate change, they cause plants and wildlife death and extinction, they cause death, miscarriage, heart and asthma attacks, and other public health damages, and they drive those disabled by Toxicant Induced Loss of Tolerance who must shelter in place from their homes. There is no special needs housing for this sensitive population. Prescribed burns are wasteful and dangerous and yet another transfer of wealth that cheats the people.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

Dear Haaland,

Congratulations on your nomination! I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Diane Harrison  
3283 Benton St

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Richard Honeycutt

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Guy Lawsen

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking. I also disapprove of the subsidies given for decades to these extractive industries, all while they roll in the billions of dollars and defile our environment.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sabine Greger

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Daniel Safer

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

I also value a livable climate, which we no-longer have and will not have as long s our emphasis is on using MORE FOSSIL FUELS instead of USING LESS FOSSIL FUELS. Fracking is absolutely un-necessqary and the wrong way to go. we cannot prevent all of it, but YOU can prevent it on PUBLIC LANDS.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Margaret Dyson-Cobb

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Wayne Fletcher  
213 N. Pinecrest Drive

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Judy Palmer

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

June Fischer

Dear Haaland,

Dear Secretary Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Sincerely,  
Bruno Taormina  
22 caton place

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Paloma Taormina

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution, and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

Fossil fuels are relics of previous centuries. They are dirty, and dangerous to our people and to our precious and fragile planet. These obsolete fuels should remain in the ground. We should spend our time and effort to develop and implement clean, modern, renewable energy sources in the 21st century.

We can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Kathleen Sewright

Dear Haaland,

I value our public lands and waters, and I object to surrendering public lands to fossil fuel firms

Oil / gas fracking is unsafe, extreme, and dangerous. It leaks massive amounts of methane, contaminates water, pollutes air, and causes earthquakes. It disrupts wildlife, harms people and communities, and is ruining public lands. It must end.

We must cease extracting and burning fossil fuels, and must oppose the industries that promote such reckless waste.

We must keep fossil fuels in the ground, and we must ban all drilling and fracking on public lands.

Fracking is so dangerous that no set of regulations can ever make it safe for public health, or for the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Ned Flaherty

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Rachelle Woods

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Huguette Moran

Dear Haaland,

Listen, I am writing because I strongly value our public lands and waters. I damn well strongly disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

Dear Haaland,

As a resident of Texas, I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking. Also the subsidies must stop.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes from the disposal of contaminated water used in fracking. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

harry grimes

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Heather "Heth" Drees

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Helen Fielding  
415 Oak Rd.  
Oil City PA, 16301-1244

Dear Haaland,

Dear Secretary Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment. It is imperative that we end fracking on public lands and waters. I urge you to please keep our public lands and waters protected and not in the hands of oil and gas companies. I am glad I had the opportunity to discuss this important matter. I look forward to a brighter future of no more fracking on public lands and waters. Thank you

Sincerely,

Halle L Pierce  
Hamden, CT. 06514

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Halle Pierce

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Helga Guequierre  
1313 N. Franklin Place #1101

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

This needs to end now. With climate change we need to preserve all undeveloped lands. Also, using public lands to mine and extract is triple taxation for something we already own. 1. we loose use of public lands. 2. we are paying for a resource, that was part of that land. 3. We are having to spend tax payers funds to clean up the ruins they leave behind. This should end now!

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Ina Lippard
