Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Christina Stemwell

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Christine Lepore

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Christopher Harris

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Cindy Beckley

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Clare Goslant

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Colleen Curtis

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Carla Davis

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Carla Rosin

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Cynthia Hicks

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Carmelita Moe

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking without consulting the American people.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end. Try gathering escaping methane in Boston, that's supposed to equal a pipeline full. Rather than just building, lets fix what we have and capture lost emissions and leaks.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment. Fracking also causes earthquakes and contaminates drinking water.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Carol DiPirro

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Carol Kelley

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

David Greene

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

David Mattson

Dear Haaland,

If you want to see what fracking really does, pressurize the water pipes in your house until they burst. Oklahoma is not known for earthquakes, but has had some due to fracking. Old masonry buildings are especially vulnerable to earthquake damage, which means you're risking ancient historic sites in your quest to make a quick buck before the whole fossil fuel house of cards comes crashing down. Destroying public lands for short term private gains enriches the few while impoverishing the many. Once destroyed, habitats cannot be rebuilt. The seemingly insignificant species we destroy in our greed might have held the key to our own survival. Assaulting nature is assaulting the future of mankind.

We have the technology to transform our energy economy to renewable sources. Solar and wind are cost competitive with fossil fuels, and can be put closer to the point of use, reducing the impact of severe weather, earthquakes, and other disasters. Geothermal and hydroelectric plants are already contributing where hot springs and flowing water exist. Hydrogen is the logical fuel for vehicles, and is available in limited areas already. A nationwide hydrogen fueling system should be developed by adding electrolysis equipment to existing gas stations. Some workers will have to be retrained, but when offshore oil workers learn they can make good money and sleep in their own beds at home every night in green energy manufacturing, installation, and maintenance jobs, their families will be much happier. When underground coal miners learn they won't have to worry about collapses and black lung, they'll also be happier. If you want to support energy projects, support clean ones and you won't get as many of these annoyed petitions.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dawn Coppola

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Deb Colotti

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Debbie Thomas

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Deborah Saunders

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Debra Griswold

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Deirdre Bolona

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil exploration, drilling, fracking, and transport and then to mining companies for more of the same.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, sinkholes, air pollution, and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment. Mining on public lands must end, too, since the environmental damage is a public cost while the profits aren't public. Too often, rights are sold for a pittance. Time to stop this! Thank you.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Denise Lytle

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Derya Ruggles

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Diana Shaheen

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Diane Nowak

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dianne Post

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Don Lipsitt

Dear Haaland,

I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Donald Taylor

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Doris Applebaum

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

Please permanently end the sacrifice of public lands to fossil fuel extraction.

Fracking for oil and gas is dangerous to the environment and public health. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly. In addition to pollution, destruction of habitat, and climate consequences, fossil fuel extraction is an enormous drain on taxpayer money. The existence of the fossil fuel industry relies on direct subsidies, favorable tax treatment, and bailouts. While small businesses faced closure during the pandemic, companies in fossil fuel extraction, mining, and related business took over \$4.5 billion through the Paycheck Protection Program. The Federal Reserve used money intended for pandemic aid to buy over \$355M in bonds issued by oil & gas companies.

We must keep fossil fuels in the ground. The plundering of public lands and public treasury by the fossil fuel industry must end.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Daniel Hawley

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly. To do otherwise will be found in a future court of law to be a genocide against humanity for failure to protect humanity from climate crisis. We need to cancel all subsidies for fossil fuels immediately and start respecting indigenous peoples rights

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment. A lot of public lands are held in lou of indigenous rights of hunting and gathering and must be respected.

Thank you for accepting my comments today.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

d robinson

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Daniel Whittaker

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dave Frank

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Ed Fiedler

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Elizabeth Mitchell

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking. I mightily disapprove of the lack of trust this practice engenders in us. We should be able to trust that these lands are truly well-cared-for, clean, healthy and beautiful. However, we no longer can...until this leasing for destructive purposes ends.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes, which in one notable case reached from Canada down the the southern US. It disrupts wildlife, harms people and communities, and it is devastating our public lands. It must end, now!

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly; perhaps a difficult feat, yet a necessary one.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment. This has, unfortunately, already been proven by recent events.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Elizabeth Oross

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

elke o. heydecke

Dear Haaland,

Public lands and waters are a foundational part of this country's well-being, culture, and survival. It has been very disheartening to witness how our public lands have been given over to oil companies for drilling and fracking.

Fracking for oil and gas is unsafe, extreme, and dangerous. Even before the final product is burned and produces carbon pollution, the process of extraction causes massive amounts of methane leakage, water contamination, air pollution, and even earthquakes. It disrupts wildlife, harms people and communities, and it devastates public lands. It must end.

To combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

Fossil fuels must remain in the ground if we have any hope of calming climate disruption. We can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Ellen Wasfi

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Emily Pitner

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Eric Gaskill

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

As a Chemical Engineer (BS 2016, Penn State) I'm not stranger to oil and gas technology, and as a Pennsylvanian I'm no stranger to fracking.

The extraction is only one small piece of oil and gas leasing. The drilling rigs, thousands of barrels of contaminated fracking fluid transported by tankers, the abandoned leaking wells decades later. Is an established, operating well particularly obtrusive to our public lands? Maybe not. But the highway required to get there, and the decades of repair required to return a site to some semblance of normal (low level contamination can NEVER be completely removed) are not what our public lands were created to protect.

Cease new permits on public lands immediately. Do not renew existing contracts, and be very sure these companies are forced to clean up after themselves on their way out before they declare bankruptcy and leave superfund sites in their wake.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Erik Curtis

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Erin Willetts

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Eva Smith

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Edward Marshall

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Elaine Coleman

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Eleanor Morris
