Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Cheryl Eames

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

I am a Board Certified Pediatrician and have treated many children with respiratory difficulties secondary to their exposures to air borne pollutants. Literature shows that those living close to areas where the air quality is poor have a greater number of more than just respiratory illnesses. Airborne pollutants also have been proven to effect fetuses during their development in utero.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. There's no room for further fossil fuel development if we want to continue living safely on this planet.

Pollution is bad already and increasing especially as the temperature is increasing. Any new oil, gas or coal leasing on public lands and waters will increase the already contaminated atmosphere.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Joyce Pusel

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Dana Sklar

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Annette LeVee

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Melody Fiore

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. A full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production is an important step. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

Collaboration with other federal agencies, Congress, tribes and state governments is also very important to ensure an orderly phaseout of federal fossil fuel production — one that creates a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

The social, economic and environmental costs of climate inaction are unacceptable. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Lydia Garvey

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Even ignoring the contribution from coal, the pollution from the world's oil and gas fields that are already producing would, if fully developed, push warming well past 1.5 degrees Celsius. That means that any new oil, gas, or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color that already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic, and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Nancy Peterson

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Christina Babst

Dear Secretary Deb Haaland,

Congratulations on your achievement. I imagine you have all kinds of stake holders knocking on your door now, wanting things. I'm no different but I just want you to know how happy I am that you and all you represent are in your new position.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Sharon Rodrigues

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

I am incredibly excited about your appointment as head of the Department of the Interior. I know your stewardship of public lands will lead our country in the right direction.

I appreciate your climate leadership and thank you for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have already said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes, and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic, and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for considering my comments.

Sincerely,  
Catherine Shea

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Regina Milione

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Rhea Damon

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Sandra Moore

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Robert Keats

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Marie VEEK

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Carol Mills

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
J Folkins

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Dear Secretary Deb Haaland,

I think there are already enough leases in the pipeline to ensure that our transitional fossil fuel supplies do not run out, but fossil fuels are not the 21st century energy source we will need if we are to escape the worst of the Climate Crisis. We've wasted 50 years due to lie, distortion and misinformation by these companies and their supporters, and it's well past time to concentrate on 21st century clean, renewable energy sources! Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Paul Tuff

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Kellie Smith

Dear Secretary Deb Haaland,

Congratulations on your new post! I have been following your career & I am thrilled the Dept of Interior is in such capable & informed hands!!

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Jo Ann Kiva

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
Rilla Heslin

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

I have full confidence in your ability to make good things happen!

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,  
John Essman
