Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

**Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Martha Eberle

Date: Saturday, April 3, 2021 2:25:55 PM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

I have lived in Wyoming and have witnessed the damage drilling for natural gas does to the environment and the natural beauty of the landscape. I worked in the oil fields of North Dakota for a company that installed the liners underneath drilling rigs to contain spills. Yet, I know that the liners do not catch everything, and that the liners must also end up in a special landfill.

Thank you for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

Dear Secretary Deb Haaland,

Public lands and waters are not the place for fossil fuel expansion. The government should be reducing our dependence on these fuels. No oil should be sold abroad and all vehicles including SUVs and trucks should have a minimum of 20 mpg capacity. Those sold with less should pay an annual fee to offset their wastefulness.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Dear Secretary Deb Haaland,

Congrats on your confirmation! I was so excited when I heard about your nomination and checking Google News almost daily in March to hear about your progress in the senate. It is a relief as someone who cares about biodiversity, the climate, and Native American interests to see the Department of the Interior is in good hands.

Now that you are the confirmed, I want to thank you for your bravery and urge you to undertake the long overdue climate review of the federal fossil fuel programs. Please take a full review because these fossil fuel projects not only risk changing our planet's climate, but also impact numerous endangered species such as the sage grouse.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Diana Stahl

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

(I'd estimate that the majority of younger generations are aware, on some poignant and distressing level, that the world they will spend the majority of their lives in has become far less viable than the world we elders knew, and abused. A new song by the rising group, Lake Street Drive, entitled "Making Do" sharply illustrates their plight; it is kind of a Greta Thunberg statement set to sophisticated music. I am sure that the young are making many more statements of this type.)

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Dear Secretary Deb Haaland,

I may be nuts, but I feel like you'll hear me :) CONGRATULATIONS, AND THANK YOU!

Your climate leadership has been critical, and I'm grateful to you for undertaking a LONG-OVERDUE CLIMATE REVIEW OF THE FEDERAL FOSSIL FUEL PROGRAMS. In the strongest possible terms, I URGE YOU to undertake a full and rigorous environmental impact study to END NEW FOSSIL FUEL LEASING AND ENACT A MANAGED DECLINE OF PRODUCTION. If done correctly, it will show what scientists have said: There Is NO ROOM for further fossil fuel development if we want a livable planet.

POLLUTION from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means ANY NEW oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

Madam Secretary (I wonder what salutation you prefer), I URGE YOU TO WORK with other federal agencies, Congress, tribes and state governments to ensure AN ORDERLY PHASE OUT of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

PLEASE FULLY CONSIDER THE social, economic and environmental COSTS OF CLIMATE INACTION. The United States must demonstrate strong GLOBAL LEADERSHIP by ending new leasing on public lands and waters.

Thank you for listening..

Sincerely,
Faith Willcox

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs.

Preaching to the choir here.

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing, and enact a managed decline of production.

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius.

That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals - and with human survival.

The cockroaches will always be all right.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts.

Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribal nations, and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic, and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Judy Irving

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I BEG you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: **IF WE WANT TO LIVE AND HAVE A PLANET FOR OUR CHILDREN WE MUST CHANGE IMMEDIATELY AND STOP THIS PRACTICE!!!**

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I BEG you to work with other federal agencies! **WITH EVERYONE!!! THIS NEEDS TO BE OUR FIRST AND HIGHEST PRIORITY!!!** Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

DO IT NOW PLEASE

Thank you for your consideration.

Sincerely,
Susan Collyer

Subject: [EXTERNAL] End Fossil Fuel Leasing on Federal Land
Date: Friday, March 26, 2021 9:25:08 AM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

Congratulations for your willingness to tackle climate problems. One of tjps is the long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Martha Jaegers

Dear Secretary Deb Haaland,

Dear Secretary Haaland:

Congratulations on your nomination and approval. It is a joy to see you in the news, to trust your acknowledgement of the responsibility you have to serve and save our public lands.

You know the facts. You have lived in their midst all your life. That is why you are in the estimable position you are now in.

You must use your power to stop federal fossil fuel programs; to stop leasing federal lands and waters for the extraction of that which should stay in the ground for the protection and preservation of all of us who live on, in and over this beautiful mother earth.

For the good of all of us and our climate today and in the future, please do what you know best: Stop the extraction of fossil fuels.

Thank you for your consideration.
Please stay safe, healthy and persevere.

Dear Secretary Deb Haaland,

We are poisoning our environment on an astronomical scale. It is completely unacceptable. Toxins are entering into every aspect of our lives from the incessant pollution that is saturating land and waters. In turn wildlife and humans in general are unknowingly ingesting these chemicals on a daily basis. As humankind continues to grow and expand we must begin to change for our children to have a chance.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. Dear Secretary Deb Haaland,

In South Eastern NM, you have seen how the air and groundwater has been polluted by oil and gas fields. People are sick and workers can't breathe. The fossil fuel companies want to drill endangering the aquifer. Water is much more precious than world destroying fossil fuels.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,

Subject: [EXTERNAL] Fossil Fuel Leasing by the Federal Government Should Stop
Date: Monday, March 29, 2021 8:31:16 PM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

When I write letters like these to public officials, I try to do so with a clear conscience, knowing that I'm doing much in my personal life to adhere to the same principles I'm asking you to follow. So I will say that I'm working to end the presence of fossil fuel use in my daily existence and I want the government to do the same. The first way this starts to happen is by not loaning out public lands for private gain.

I therefore urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Subject: [EXTERNAL] Fossil Fuel Production is No Longer Rational Use of Public Lands
Date: Friday, March 26, 2021 7:09:05 AM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

***If we want to keep a habitable climate, the federal government must stop selling, permitting, and leasing fossil fuels. This federal complicity with the fossil fuel industry is mathematically incompatible with the remaining carbon budget that remains within a habitable climate future, and I urge you to direct a permanent termination of the sale of fossil fuels from federal lands and waters. These leases are channeling billions of tons of carbon from under our public lands into our atmosphere, and swamp all other efforts to promote alternative energy, conservation, or efficiency.

To keep climate change within a level tolerable for human civilization requires, as a mathematical certainty, that 80% of known remaining fossil fuel reserves must remain underground, not converted into atmospheric carbon dioxide. This necessarily includes federally owned bodies of coal, oil, and gas on public lands. No cost-benefit calculation exists, by which the Department of Interior may conclude that the sale of these fossil fuels is in the public interest, or represents a rational or reasonable allocation of the natural resources under Interior Department management.***

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a WAY TOO long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to TOTALLY end new VILE fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have CLEARLY said: There's no room for further fossil fuel development if we want a livable planet.

IT HAS BEEN CLEARLY PROVEN THAT pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is ABSOLUTELY incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will OVERWHELMINGLY benefit public health, especially that of low-income communities and communities of color who, OF COURSE, already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the UNCONSCIONABLE destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

To whom it may concern,

Attached and also copied into the body of this email, please find information submitted from two CFACT student leaders, David Bucarey of George Mason University, and Grace Cancelmo of Vanderbilt University, to be of use for the Department's interim report on federal oil and gas leasing. Thank you! Adam Houser, CFACT

March 25, 2021

To whom it may concern,

We write this letter to provide feedback as requested by the U.S. Department of the Interior to inform their interim report as part of the comprehensive review of the federal oil and gas program as called for in Executive Order 14008.

We are college students and leaders in the Collegians program of CFACT, the Committee For A Constructive Tomorrow, which has hundreds of thousands of supporters across the nation and has worked with thousands of students over the past two decades to raise awareness for proper stewardship and involve students in environmental policy.

We participated in the Department's virtual Forum on March 25, 2021, and we are opposed to the Administration's decision to place the moratorium on new oil and gas leases on federal lands and waters as outlined in the Executive Order. It is our suggestion that the moratorium be lifted immediately or that the Department complete its review as quickly as possible to reopen the leasing process.

We love our environment and greatly value our National Parks, lands, waters, and wildlife. Yet we worry that this order will hurt our National Parks and environment, as according to the Land and Water Conservation Fund, our National Parks receive a significant amount of funding from the royalties of offshore development – \$900 million every year.

Our National Parks already have a backlog of \$12 billion in repairs and work needed, and while part of this will be helped by the Great American Outdoors Act, it only provides half the funding needed, and pausing the leasing process for offshore oil and gas in federal waters will

only further worsen this funding backlog and hurt our lands, waters, and wildlife.

It should be paramount that we protect our environment and air, but the United States already reduced emissions by 12% since 2005, thanks to free market competition and natural gas, while emissions from other nations have increased significantly.

We appreciate your time and urge the Department of the Interior to quickly reopen the leasing process for oil and gas on federal lands and waters to help our National Parks and environment.

Thank you,
David Bucarey

Subject: [EXTERNAL] It has Long Been Time to End Federal Fossil Fuel Leasing
Date: Friday, March 26, 2021 9:37:35 AM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

It is such a boost to the hearts of those of us who care for the environment to have someone as Sec. of Interior who understands that managing our public lands does not mean giving carte blanche to energy development. We need to realize and enact policies that climate change is real and action is needed!

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
David Rudin

Hello,

I am reaching out to see if the DoI is planning to release a recording of last week's Public Forum on Federal Oil and Gas Programs. Unfortunately, we were not able to participate but would love the opportunity to provide comments if we can be helpful to the discussion.

I included some details about the webinar we received after it occurred below.

WASHINGTON – The Interior Department today released additional information about the upcoming virtual forum regarding the federal oil and gas program, including the public's viewing options and ability to submit written input to inform Interior's review.

The public forum is part of Interior's comprehensive review of the federal oil and gas program as called for in Executive Order 14008 and will feature several panels to highlight perspectives from invited participants including industry representatives, labor and environmental justice organizations, natural resource advocates, Indigenous organizations, and other experts.

- **DATE:** Thursday, March 25, 2021
- **TIME:** 1:00 pm – 4:30 pm ET
- **REGISTRATION:** The forum will take place via Zoom Webinar. Anyone interested in viewing the forum may [register via Zoom](#). A livestream of the event will also be available at doi.gov/events. The forum will be recorded and have live captions.

All the best,
Dalton

Dear Secretary Deb Haaland,

Like so many Americans, I am extremely concerned that our country has been going backwards when it comes to addressing the major cause of the climate crisis we are experiencing now: fossil fuel production and consumption. So thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
EVELYNE VELLEAUS

Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jamie Rothstein

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

The sooner we reach our climate goals the better.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Respectfully,

As a lifetime coastal resident and Rural American—one of multiple millions—please accept my appreciation for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs.

Please:

- . Continue your entrusted efforts.
- . Undertake a full and rigorous environmental impact study to end new fossil fuel leasing.
- . Enact a managed decline of production.

Upon completion, this study will assuredly support science-based conclusions—if we want a livable planet—there is no room for further fossil fuel development.

To quote the Center for Biological Diversity:

“Pollution from the world’s already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

... urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.”

Please:

I trust that you will fully consider:

- . OUR health, safety, civil-civic-humans rights, social, economic and environmental costs of climate inaction
- . OUR nation’s entrusted duty to demonstrate strong global leadership
- . Ending new leasing on OUR nation’s PUBLIC lands and waters

With appreciation for your time and thoughtful consideration.

Every good intention.

Sincerely,

Rita A

Dear Secretary Deb Haaland,

I'm happy that, in your new position, Interior is undertaking a long-overdue climate review of federal fossil fuel programs. A complete, rigorous environmental impact study is advised to end new fossil fuel leasing and enact a managed decline of production. It may likely conclude with what scientists have said: no capacity for further fossil fuel development exists if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. As a millennial who should have many more years to live on this planet, I strongly urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet. It is completely unacceptable that folks like me and younger are poised to inherit a planet that is not going to be livable for much longer and that many of us will likely die prematurely because of the havoc of climate change.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts, as you know. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I strongly urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

As you know, the United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your leadership.

Sincerely,
Phoenix Oaks

Subject: [EXTERNAL] PLEASE End Federal Fossil Fuel Leasing!!
Date: Saturday, March 27, 2021 10:47:20 AM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

Thank you for your climate and natural world leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs!

As a Science Teacher/Environmental Educator, Engineering/STEM Professional, and an Environmental/Energy/Climate change/Human Health/Natural World Advocate, I wholeheartedly urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production!!

If done correctly, it will show what scientists have said: There's NO room for further fossil fuel development if we want a livable planet!

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius! That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals!

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts! Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises!!

Besides, the need for fossil fuels is decreasing and will continue to do so into the future! And since there is only 50 to 100 years of fossil fuels left in the world we will have to switch to other energy sources sometime in the near future! Due to the damage caused by burning fossil fuels to the environment AND human health I strongly suggest we switch sooner than later!!

In order to fight pollution and climate change, and improve human health and environmental quality, we MUST eliminate our dependence on fossil fuels and prepare for the Renewable Energy and Energy Efficiency Revolutions (which have already started!); This must include natural climate solutions and eliminating fossil fuel subsidies and tax breaks!

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure a quick orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development!!

Please fully consider the social, economic and environmental costs of climate inaction! The United States MUST demonstrate strong global leadership by ending new leasing on public lands and waters!!

Thanks!

Sincerely,
Brad Snyder

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Matthew Edgar

Dear Secretary Deb Haaland,

First, please let me tell you I am deeply ashamed of two of Montana's elected representatives' racist votes against your nomination. Both Daines and Rosendale are owned by the fossil fuel industry - they care nothing about what ordinary Montanans want our public lands to be used for, namely: recreation and wildlife habitat. Our state has a very large population of Native Americans and I'm proud to work with the Salish Kootenay tribal college on various projects. I am so happy that you are our new Interior Secretary and the first, long-overdue, Native American to hold that post.

Second, thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Bobby Fries

Subject: [EXTERNAL] Protect Our Health and Environment by Ending Federal Fossil Fuel Leasing
Date: Friday, March 26, 2021 1:22:37 PM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

If we are ever going to address climate change, we must actually do something. The obvious first step is to stop pollution from oil and gas. Ending oil and gas production on public lands would signal to the investment class that we are serious and it is time to invest in renewable energy technology.

Ending oil and gas production on public lands would also protect public lands from some of the bad actors in the oil and gas industry. Just today, I heard two different reports about pollution issues involving Enbridge--one in Minnesota and one in Michigan. We can no longer allow these companies to put profit over our health and environment.

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed, but speedy, decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Good morning,

My name is Stefanie Krantz. I live in Clarkston, WA. I am an ecologist and a climate change planner who, amongst other things, has done thousands of hours of surveys for threatened, endangered, and special status species on public lands for solar, wind, transmission, and transportation projects in the West. I have also traveled all over the United States visiting National Forests, Grasslands, Parks, and other Federal Lands that the DOI manages. I have also studied with excruciating detail how climate change disrupts nature, the built environment, and the lives of human beings. I have attached three figures. One is from the Intergovernmental Panel on Climate Change 1.5 report explaining how if we do not get our act together within the next 9 years, and get our emissions down to near zero, we will pass the 1.5 degrees threshold that means shockingly horrendous consequences, almost beyond comprehension in their scale and suffering. The second is a photo of my **(b) (6)**. The last is a graph from Foster, Royer, & Lunt, 2017 showing the evolution of atmospheric carbon dioxide and climate forcing (<https://www.nature.com/articles/ncomms14845>). This figure depicts a reconstruction of carbon dioxide (upper graph) and temperature (lower graph) for the last 450 million years, and climate projections for the next 400 years, and demonstrates that should we fail to act rapidly, we will have the climate of the dinosaurs before my son turns 70. It also shows what climate we would have if we burned as much fossil fuels as we possibly could (Wink 12.5)

After reviewing the evidence for years, it is beyond comprehension to me why the federal government is investing any money in fossil fuels infrastructure or research and development, or allowing drilling, fracking, or coal mining on federal lands when there are SAFE, CLEAN alternatives that are a better investment in the long run while we are being creamed by countries like China that have sorted this out and instead of waging war on oil rich countries, are becoming rich by investing in green energy.

I have written letter after letter, made phone calls, marched, and I now work every day trying to do whatever I can so that my son has a livable future (climate change planner for a Tribe at present). What is it going to take to get the federal government to listen to science, reason, and their own scientists, to respond to the needs of the people, and to mobilize with the scale, speed, and effort necessary to combat the climate crisis? I am sure after watching this runaway train unfold for

decades I am understandably frustrated. I can tell you that many federal employees are my heroes and I certainly don't blame them. However, the federal government MUST now do everything possible to respond to the climate crisis as rapidly as possible because we are running out of time very rapidly.

Vandana Shiva said, "it isn't an investment if it destroys the planet." David Suzuki pointed out quite helpfully that the economy is made up, literally a fiction of the human imagination. It is not a real thing. Our atmosphere, water, and wildlife are not made up, and unlike the economy which is only limited by the human imagination, physics and chemistry are indifferent to our whims. I know that there are literally thousands of hopeful solutions that solve a host of problems, and that millions of people are working on restoring soil, cleaning up water, protecting nature, and rewilding this planet, but it is not enough without the federal government ending the burning of fossil fuels and the release of methane from oil and gas operations into the environment, and subsidizing and incentivizing the solutions. For the amount of money spent on the Iraq War nearly every home in the United States could have solar panels on the roof, for instance.

Please take future generations into account as you evaluate what to do about the oil and gas industry gobbling up leases and working diligently to demote public lands, strip away environmental protections, and stymie progress on the climate emergency.

Thank you,

Stefanie Krantz

1226 10th Street, Clarkston, WA 99403
(509)552-2436

The Secret of Change Is to Focus All of Your Energy, Not on Fighting the Old, But on Building the New.

~Dan Millman's 1980 "Way of the Peaceful Warrior"

We are the first generation to be able to end poverty, and the last generation that can take steps to avoid the worst impacts of climate change.

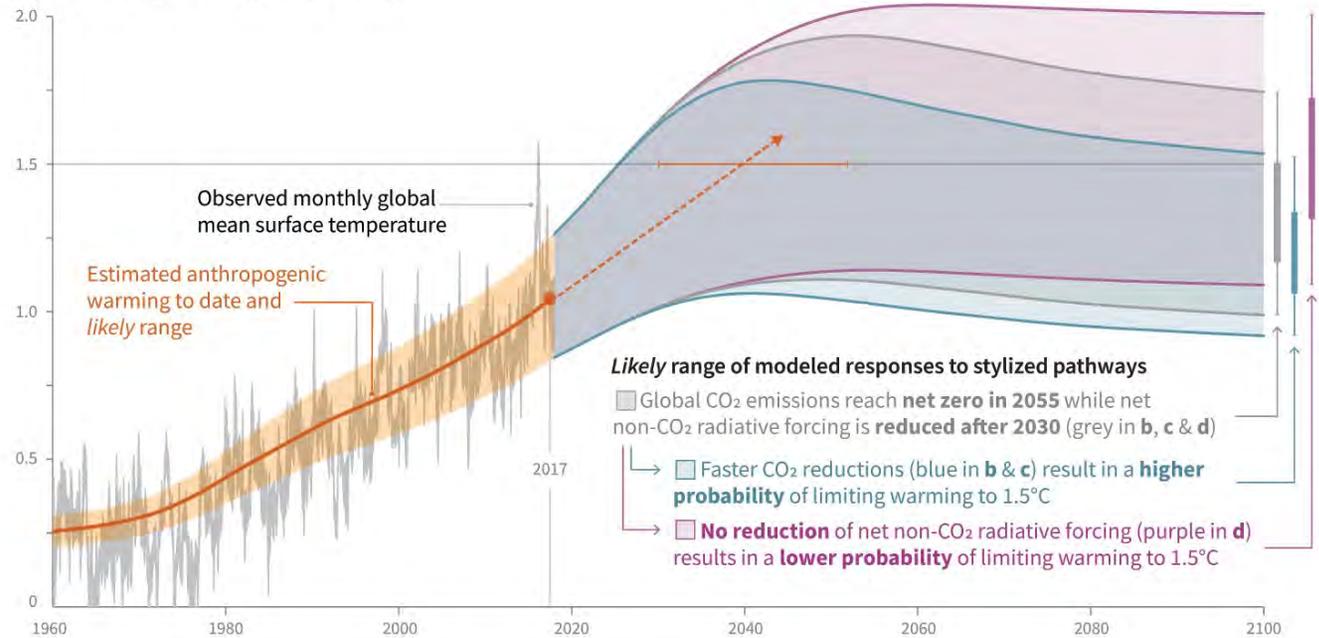

Future generations will judge us harshly if we fail to uphold our moral and historical responsibilities"

~Ban Ki-moon, Secretary-General, United Nations, New York

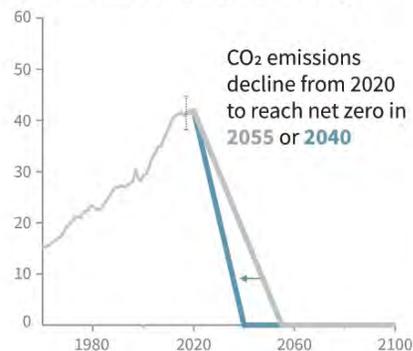

Cumulative emissions of CO₂ and future non-CO₂ radiative forcing determine the probability of limiting warming to 1.5°C

a) Observed global temperature change and modeled responses to stylized anthropogenic emission and forcing pathways

Global warming relative to 1850-1900 (°C)

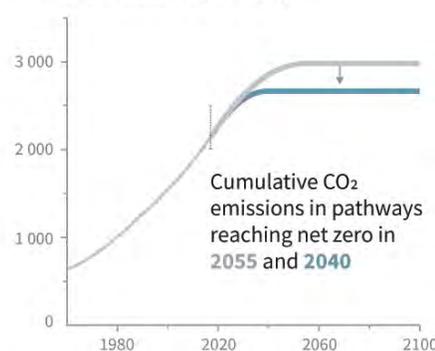

b) Stylized net global CO₂ emission pathways Billion tonnes CO₂ per year (GtCO₂/yr)

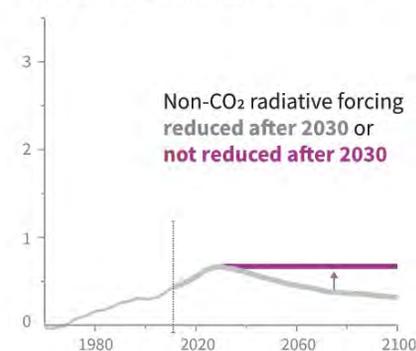

Faster immediate CO₂ emission reductions limit cumulative CO₂ emissions shown in panel (c).

c) Cumulative net CO₂ emissions Billion tonnes CO₂ (GtCO₂)

Maximum temperature rise is determined by cumulative net CO₂ emissions and net non-CO₂ radiative forcing due to methane, nitrous oxide, aerosols and other anthropogenic forcing agents.

d) Non-CO₂ radiative forcing pathways Watts per square metre (W/m²)

I am a reporter with the Fairbanks Daily News-Miner newspaper in Alaska.

I am requesting a link to Interior Secretary Deb Haaland's statements Friday on the expected interim report/recommendations this summer on gas and oil drilling in the U.S.

Thank you,
Linda F. Hersey

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Ida Foo

Dear Secretary Deb Haaland,

Thank you for your care for and connection to Mother Earth, demonstrated by your undertaking of a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: Fossil fuel development and a livable planet are incompatible.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters overwhelms U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of Native Americans trying to maintain their territorial lands, of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. Valuing the collective good for future generations will create a peaceful, inclusive, healthy society

.
Thank you for your consideration.

Dear Secretary Deb Haaland,

I'm a meteorologist with two degrees in atmospheric science. The great majority of the most qualified scientists in my field of study believe human-caused greenhouse gas emissions are responsible for a dangerous climate change and that urgent action to reduce these emissions and transition to the use of clean, renewable energy sources is necessary to avoid the worst impacts.

That's why I'm writing to thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. Subject: [EXTERNAL] Stop leasing for Federal Fuel
Date: Friday, March 26, 2021 11:55:52 AM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. Please make this a full and rigorous environmental impact study to review and justify ending new fossil fuel leasing, and enact a managed decline of production. If done correctly, this will show what scientists have said: there can be NO further fossil fuel development if we want to keep a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push global warming well past 1.5 degrees Celsius, making any new oil, gas or coal leasing on public lands and waters incompatible with decent U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Roberta Stuemke

Date: Thursday, April 1, 2021 8:45:20 AM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Thank you for the opportunity to submit information as a follow up to your **Forum on Federal Oil and Gas Program** held on March 25, 2021.

Focus Exploration, LLC is a small prospect generation company working the offshore Gulf of Mexico (GOM). We generate prospects on offshore leases that are available for bidding in the offshore lease sales and present them to operators and industry clients who bid on the leases, drill the prospects and produce the hydrocarbons, providing substantial royalty income to the government. Our company depends on each of the lease sales to continue operating as a business.

The offshore GOM is a region with a small environmental and carbon footprint. The GOM allows for high levels of production from a small physical area and results in the lowest carbon barrels produced from any US basin.

Each lease we present to an operator who acquires the lease, drills wells and produces hydrocarbons results in significant revenues to the government as well as funding the Land & Water Conservation Fund. Additionally, every lease acquired, drilled and produced results in numerous jobs throughout the oil & gas supply chain, favorably impacting the overall US economy. Without holding lease sales in the GOM, investment dollars will shift to other areas with a more detrimental environmental impact, a larger carbon footprint and will take funds away from the Land & Water Conservation Fund.

The Focus Exploration, LLC team strongly encourages you to continue holding the offshore GOM lease sales which allows for the production of oil from the *nation's basin with the lowest environmental impact and smallest carbon footprint*.

Warmest regards,

Donald V. Crider, CEO & Michael A. Scherrer, President
Focus Exploration, LLC

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Rodman Chase

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil-fuel programs. As a part of this, I hope you'll prepare an EIS to end new fossil-fuel leasing by the federal government, and enact a managed decline of fossil-fuel production. We can expect such an EIS to support what climate scientists have said, that there's no room for further fossil fuel development if we want future generations to continue to live on our planet.

Pollution from the world's already-producing oil and gas fields--if fully developed, and without factoring in coal--is expected to push global warming well past 1.5 degrees Celsius. In other words, any new oil, gas or coal leasing on federal lands and waters is incompatible with U.S. climate goals.

Phasing out new federal fossil fuel development would benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat would prevent the worst of the predicted climate and endangered-species crises.

Thank you, in advance, for working with federal agencies, Congress, tribes, and state governments to accomplish all of the above.

And thank you, in advance, for fully considering the social, economic, and environmental benefits of climate action.

With your efforts, and the efforts of the groups you will be working with, The U.S. will be demonstrating strong global leadership, and doing our part to save the world.

Thank you for your consideration.

Sincerely,

Hello.

This comment/ comments relates to post-O&G development reclamation. Applies to other types of post development reclamation. I leave it to you to decide the degree to which DOI and US government will consider updating the definition of reclamation to be more equivalent with that of restoration, but as a biogeochemist and ecologist, I strongly suggest we move that direction. The following comments are directly consistent with the Biden administration objectives, as well as sound and modern science. All these comments reflect feasible improvements to how we manage public (and private) lands in the context of energy (and other) development.

Reclamation requirements are insufficient as regards ensuring the disturbed lands and ecosystem services are returned to healthy or pre-disturbance condition. In the status quo (and in the past), private and public lands and ecosystems are significantly damaged to produce private profit and support overall subsidized economic processes, and indirectly (meaning not just carbon emissions) global change associated with climate change.

You know bonds are insufficient, and others will comment on that, so I will comment from my expertise and experience working in BLM energy states WY, UT, and the Colorado Plateau Region since 2009.

Reclamation planning and implementation & monitoring need to be updated to match science. They were not made by scientists and support extraction and profit over sustainable resource management. Only minimal criteria exist for reclamation success and minimal types of data are required for pre-disturbance site characterization. In my experience suggestions for change or improvement are met with strong resistance – anything that might increase time, convenience, and cost to the producer and often land manager. Companies complain to elected representatives with the result being the stifling of change or improvement.

Modern methods of soil and microbiome analyses could be used to better characterize pre-disturbance site condition as well as progress towards post-disturbance site reclamation.

Reclamation plans should be required, not optional. Reclamation Policies should be enforceable, not suggestions/ optional.

Reclamation costs should be budgeted more realistically – not just \$1000 per acre for the entire scope of reclamation work (including dirt work, weed treatment, seeding, etc).

Reclamation plans generally include Topsoil Management Plans. Plans should also include Procurement Plans for the needed Plant Materials (seed, seedlings, biocrust propagules), because a common excuse from companies is that they couldn't find appropriate or approved plant materials to purchase once they get around to reclamation (e.g. all seed was already bought for post-fire efforts, or seed was too costly, or the native species were not available so they bought non-native species like Siberian wheatgrass or alfalfa and seeded that on public land). FYI I proposed policy to enact this in Wyoming during the Obama administration, but although Minerals & Lands managers recognized the need, they were not interested in enacting new policy that would surely be

challenged by O&G producers and mining companies.

Reclamation seeding/ planting should be viewed & managed similarly to other land surface projects involving seeding/ planting like post-fire, wildlife habitat, or weed management projects. Currently reclamation data (plans, implementation, tracking of effectiveness) is managed and tracked completely separately from other surface projects. It is very difficult to compile useful data on plant materials ordered, purchased, or effectiveness – BLM is not required to do so. You can get more information about this problem from BLM Lands & Minerals vs. Renewable Resources Divisions.

I am a continuous advocate for more consideration of reclamation plant material needs use and tracking, including in the context of the current Federal Interagency Working Group for the National Seed Strategy, and to the National Academy of Sciences Committee currently reviewing national Native Seed Needs and Capacities. You can see results of one simple effort to estimate seed needs on well pads alone here: <https://cpnpp-natureserve.hub.arcgis.com/app/67ee25fc31d94c4a95af02b0542667a5>. Such estimates could be greatly improved with more resources/ cooperation from BLM, improvement in BLM's permitting, tracking databases, policy, etc. Ditto for all lands in the country.

Energy development on arid lands (those lands of less interest to ranchers and farmers and thus deemed less economically valuable) is common on federal lands. Reclamation on those lands is very difficult as on all arid and semi-arid lands. Aside from obvious reclamation challenges of climate and precipitation or poor soils, a major problem is that plant materials development in the US has traditionally been done by USDA. Unfortunately, USDA does not view BLM as a customer – their plant materials work has not been done with dry rangelands and arid lands in mind (they mostly work to benefit farmers). As a result, there are few commercially available genetically appropriate seed sources for difficult reclamation projects. This lack has never been reconciled with the energy development – development is approved regardless of how difficult the reclamation may be.
