### **Interior Department Releases Final Rule to Support Safe, Responsible Hydraulic Fracturing Activities on Public and Tribal Lands** *Fundamental Standards Address Well Integrity, Water Protection, Disclosure of Chemicals*

**WASHINGTON, D.C.** – Following a robust and transparent public process that included more than 1.5 million public comments, Secretary of the Interior Sally Jewell today released final standards that will support safe and responsible hydraulic fracturing on public and American Indian lands. The commonsense standards will improve safety and help protect groundwater by updating requirements for well-bore integrity, wastewater disposal and public disclosure of chemicals.

There are more than 100,000 oil and gas wells on federally managed lands. Of wells currently being drilled, over 90 percent use hydraulic fracturing. The rule applies only to development on public and tribal lands and includes a process so that states and tribes may request variances from provisions for which they have an equal or more protective regulation in place. This will avoid duplication while enabling the development of more protective standards by state and tribal governments. Today's final rule is a major step in the Department of the Interior's agenda to support a balanced, prosperous energy future. Other reforms will also include important measures to target where oil and gas leasing occurs and protect sensitive areas that are too special to drill.

“Current federal well-drilling regulations are more than 30 years old and they simply have not kept pace with the technical complexities of today's hydraulic fracturing operations,” Secretary Jewell said. “This updated and strengthened rule provides a framework of safeguards and disclosure protocols that will allow for the continued responsible development of our federal oil and gas resources. As we continue to offer millions of acres of public lands for conventional and renewable energy production, it is absolutely critical the public have confidence that transparent and effective safety and environmental protections are in place.”

Key components of the rule, which will take effect in 90 days include:

- Provisions for ensuring the protection of groundwater supplies by requiring a validation of well integrity and strong cement barriers between the wellbore and water zones through which the wellbore passes;
- Increased transparency by requiring companies to publicly disclose chemicals used in hydraulic fracturing to the Bureau of Land Management through the website FracFocus, within 30 days of completing fracturing operations;
- Higher standards for interim storage of recovered waste fluids from hydraulic fracturing to mitigate risks to air, water and wildlife;
- Measures to lower the risk of cross-well contamination with chemicals and fluids used in the fracturing operation, by requiring companies to submit more detailed information on the geology, depth, and location of preexisting wells to afford the BLM an opportunity to better evaluate and manage unique site characteristics.

“This rule will protect public health and the environment during and after hydraulic fracturing operations at a modest cost while both respecting the work previously done by the industry, the states and the tribes and promoting the adoption of more protective standards across the country,” said Assistant Secretary for Land and Minerals Management Janice Schneider. “It will be implemented in the most efficient way possible to avoid duplication or unnecessary activities by industry, other regulators, or BLM staff. We know how important it is to get this right.”

The new rule is the culmination of four years of extensive public involvement to bring onshore oil and gas drilling regulations into the 21st century. The BLM published both a draft rule and a supplemental draft rule, held regional forums and numerous stakeholder meetings on the proposal and reviewed more than 1.5 million public comments.

BLM staff studied state and tribal regulations and consulted with state and tribal regulators, industry, environmental experts, and the public, including communities affected by oil and gas operations. In many instances, provisions in the new rule are similar to or based on existing state or tribal rules and industry best practices. The result of this careful consultation is a rule that will enhance environmental protection in a thoughtful and cost-effective way. BLM estimates the new rule will cost less than one-fourth of 1 percent of the cost of drilling a well, based on the Energy Information Administration’s average per well cost of \$5.4 million.

“This rule was informed and shaped by the technical expertise, interests and concerns of all of our partners, and builds on the work of states and tribes to ensure best practices on a nationwide basis,” said BLM Director Neil Kornze. “The new regulations are essential to our mutual efforts to protect the environment and the communities that depend on vital water, land and wildlife resources. This rule is good government.”

The BLM oversees about 700 million subsurface acres of federal mineral estate and carries out regulatory duties of the Secretary of the Interior for an additional 56 million acres of Indian mineral estate across the United States. The Indian Mineral Leasing Act and other laws require that Indian lands and communities have the same protections as U.S. public lands.

The commonsense standards will improve safety and help protect groundwater by updating requirements for well-bore integrity, wastewater disposal and public disclosure of chemicals.

There are more than 100,000 oil and gas wells on federally managed lands. Of wells currently being drilled, over 90 percent use hydraulic fracturing. The rule applies only to development on public and tribal lands and includes a process so that states and tribes may request variances from provisions for which they have an equal or more protective regulation in place. This will avoid duplication while enabling the development of more protective standards by state and tribal governments. Today's final rule is a major step in the Department of the Interior's agenda to support a balanced, prosperous energy future. Other reforms will also include important measures to target where oil and gas leasing occurs and protect sensitive areas that are too special to drill.

“Current federal well-drilling regulations are more than 30 years old and they simply have not kept pace with the technical complexities of today's hydraulic fracturing operations,” Secretary Jewell said. “This updated and strengthened rule provides a framework of safeguards and disclosure protocols that will allow for the continued responsible development of our federal oil and gas resources. As we continue to offer millions of acres of public lands for conventional and renewable energy production, it is absolutely critical the public have confidence that transparent and effective safety and environmental protections are in place.”

Key components of the rule, which will take effect in 90 days include:

- Provisions for ensuring the protection of groundwater supplies by requiring a validation of well integrity and strong cement barriers between the wellbore and water zones through which the wellbore passes;
- Increased transparency by requiring companies to publicly disclose chemicals used in hydraulic fracturing to the Bureau of Land Management through the website FracFocus, within 30 days of completing fracturing operations;
- Higher standards for interim storage of recovered waste fluids from hydraulic fracturing to mitigate risks to air, water and wildlife;
- Measures to lower the risk of cross-well contamination with chemicals and fluids used in the fracturing operation, by requiring companies to submit more detailed information on the geology, depth, and location of preexisting wells to afford the BLM an opportunity to better evaluate and manage unique site characteristics.

“This rule will protect public health and the environment during and after hydraulic fracturing operations at a modest cost while both respecting the work previously done by the industry, the states and the tribes and promoting the adoption of more protective standards across the country,” said Assistant Secretary for Land and Minerals Management Janice Schneider. “It will be implemented in the most efficient way possible to avoid duplication or unnecessary activities by industry, other regulators, or BLM staff. We know how important it is to get this right.”

The new rule is the culmination of four years of extensive public involvement to bring onshore oil and gas drilling regulations into the 21st century. The BLM published both a draft rule and a supplemental draft rule, held regional forums and numerous stakeholder meetings on the proposal and reviewed more than 1.5 million public comments.

BLM staff studied state and tribal regulations and consulted with state and tribal regulators, industry, environmental experts, and the public, including communities affected by oil and gas operations. In many instances, provisions in the new rule are similar to or based on existing state or tribal rules and industry best practices. The result of this careful consultation is a rule that will enhance environmental protection in a thoughtful and cost-effective way. BLM estimates the new rule will cost less than one-fourth of 1 percent of the cost of drilling a well, based on the Energy Information Administration’s average per well cost of \$5.4 million.

“This rule was informed and shaped by the technical expertise, interests and concerns of all of our partners, and builds on the work of states and tribes to ensure best practices on a nationwide basis,” said BLM Director Neil Kornze. “The new regulations are essential to our mutual efforts to protect the environment and the communities that depend on vital water, land and wildlife resources. This rule is good government.”

The BLM oversees about 700 million subsurface acres of federal mineral estate and carries out regulatory duties of the Secretary of the Interior for an additional 56 million acres of Indian mineral estate across the United States. The Indian Mineral Leasing Act and other laws require that Indian lands and communities have the same protections as U.S. public lands.

### **Interior Department Releases Final Rule to Support Safe, Responsible Hydraulic Fracturing Activities on Public and Tribal Lands**

*Fundamental Standards Address Well Integrity, Water Protection, Disclosure of Chemicals*

**WASHINGTON, D.C.** – Following a robust and transparent public process that included more than 1.5 million public comments, Secretary of the Interior Sally Jewell today released final standards that will support safe and responsible hydraulic fracturing on public and American Indian lands. The commonsense standards will improve safety and help protect groundwater by updating requirements for well-bore integrity, wastewater disposal and public disclosure of chemicals.

There are more than 100,000 oil and gas wells on federally managed lands. Of wells currently being drilled, over 90 percent use hydraulic fracturing. The rule applies only to development on public and tribal lands and includes a process so that states and tribes may request variances from provisions for which they have an equal or more protective regulation in place. This will avoid duplication while enabling the development of more protective standards by state and tribal governments. Today's final rule is a major step in the Department of the Interior's agenda to support a balanced, prosperous energy future. Other reforms will also include important measures to target where oil and gas leasing occurs and protect sensitive areas that are too special to drill.

“Current federal well-drilling regulations are more than 30 years old and they simply have not kept pace with the technical complexities of today's hydraulic fracturing operations,” Secretary Jewell said. “This updated and strengthened rule provides a framework of safeguards and disclosure protocols that will allow for the continued responsible development of our federal oil and gas resources. As we continue to offer millions of acres of public lands for conventional and renewable energy production, it is absolutely critical the public have confidence that transparent and effective safety and environmental protections are in place.”

Key components of the rule, which will take effect in 90 days include:

- Provisions for ensuring the protection of groundwater supplies by requiring a validation of well integrity and strong cement barriers between the wellbore and water zones through which the wellbore passes;
- Increased transparency by requiring companies to publicly disclose chemicals used in hydraulic fracturing to the Bureau of Land Management through the website FracFocus, within 30 days of completing fracturing operations;
- Higher standards for interim storage of recovered waste fluids from hydraulic fracturing to mitigate risks to air, water and wildlife;
- Measures to lower the risk of cross-well contamination with chemicals and fluids used in the fracturing operation, by requiring companies to submit more detailed information on the geology, depth, and location of preexisting wells to afford the BLM an opportunity to better evaluate and manage unique site characteristics.

“This rule will protect public health and the environment during and after hydraulic fracturing operations at a modest cost while both respecting the work previously done by the industry, the states and the tribes and promoting the adoption of more protective standards across the country,” said Assistant Secretary for Land and Minerals Management Janice Schneider. “It will be implemented in the most efficient way possible to avoid duplication or unnecessary activities by industry, other regulators, or BLM staff. We know how important it is to get this right.”

The new rule is the culmination of four years of extensive public involvement to bring onshore oil and gas drilling regulations into the 21st century. The BLM published both a draft rule and a supplemental draft rule, held regional forums and numerous stakeholder meetings on the proposal and reviewed more than 1.5 million public comments.

BLM staff studied state and tribal regulations and consulted with state and tribal regulators, industry, environmental experts, and the public, including communities affected by oil and gas operations. In many instances, provisions in the new rule are similar to or based on existing state or tribal rules and industry best practices. The result of this careful consultation is a rule that will enhance environmental protection in a thoughtful and cost-effective way. BLM estimates the new rule will cost less than one-fourth of 1 percent of the cost of drilling a well, based on the Energy Information Administration’s average per well cost of \$5.4 million.

“This rule was informed and shaped by the technical expertise, interests and concerns of all of our partners, and builds on the work of states and tribes to ensure best practices on a nationwide basis,” said BLM Director Neil Kornze. “The new regulations are essential to our mutual efforts to protect the environment and the communities that depend on vital water, land and wildlife resources. This rule is good government.”

The BLM oversees about 700 million subsurface acres of federal mineral estate and carries out regulatory duties of the Secretary of the Interior for an additional 56 million acres of Indian mineral estate across the United States. The Indian Mineral Leasing Act and other laws require that Indian lands and communities have the same protections as U.S. public lands.

## Final Hydraulic Fracturing Rule

### Timeline

- November 2010 -- First Department of the Interior forum on hydraulic fracturing
- April 2011 -- The BLM held three regional forums in Arkansas, Colorado and North Dakota attended by more than 600 members of the public
- November 2011 -- National Gas Subcommittee of the Secretary of Energy's Advisory Board recommends that the BLM undertake a rulemaking to ensure well integrity, water protection, and adequate public disclosure
- May 11, 2012 -- The BLM publishes a draft rule drawing 177,000 public comments
- May 24, 2013 -- The BLM publishes a supplemental draft rule drawing 1.35 million comments
- March 20, 2015 -- The BLM publishes a final rule

### Key Issues

Like the draft and supplemental draft rules, the final regulations seek to:

- Ensure that wells are properly constructed to protect groundwater;
- Make certain that fluids that flow back to the surface as a result of hydraulic fracturing operations are managed in an environmentally responsible way;
- Provide public disclosure of the chemicals and additives used in hydraulic fracturing fluids as well as information such as the geology, depth, location and water use of the operation; and
- Improve measures to prevent cross-well contamination, commonly called "frack hits."

### How the Final Rule Addresses These Issues

#### **Protects groundwater by requiring:**

- Strong cement barriers between the wellbore carrying fracturing fluids/hydrocarbons and the groundwater zones through which the wellbore passes.
- Operators to monitor cementing and submit a report verifying monitoring 48 hours prior to beginning hydraulic fracturing operations for all wells. The report should contain specific parameters of the cement job. For intermediate or production casing strings, the operator must either circulate cement to the surface or run a Cement Evaluation Log ("CEL") demonstrating that there is at least 200 feet of adequately bonded cement isolation between the zone to be fracked and the deepest water zone.
- Operators to follow specific best practices, including demonstrating that the wellbore casing is adequate on each and every well, not just a sample (or "type") well.
- Protective standards, including cement returns and pressure testing on each well.
- An approved remediation plan for wells where cementing does not meet the standards and a CEL on all remediated wells.

**Manages fluids by:**

- Treating all recovered fluids from hydraulic fracturing operations in the same way, and requiring a standard of care for interim storage adequate to prevent damage to surface or groundwater and wildlife from any toxicity.
- Requiring interim storage of all produced water in rigid enclosed, covered or netted above-ground tanks, subject to very rare and limited exceptions in which lined pits could be used (with a leak detection system). Replaces current practice that allows for the use of pits or tanks in all cases for interim storage.

**Provides for public disclosure of chemicals by:**

- Requiring chemical disclosure to the BLM through the website FracFocus, or other designated online database, within 30 days of completion of hydraulic fracturing operations.
- Requiring the filing with the BLM of affidavits signed by a corporate officer or the equivalent responsible official of the operator to provide justification for any claim of a trade secret. The BLM retains the right to obtain any information withheld as a trade secret and to review that claim. The affidavit must also identify and provide contact information for the owner of the withheld information, if it is not the operator.
- Requiring operators to retain information that is withheld for the life of the well, or 7 years on Federal lands or 6 years on Indian lands, whichever is longer.

**Prevents frack hits by:**

- Requiring operators to submit information to the BLM so that the agency can determine the potential for cross-well contamination, commonly called “frack hits,” where the force of one fracking operation affects other nearby wells.
  - Operators must submit a map showing the trajectory of the proposed wellbore into which hydraulic fracturing fluids are to be injected and all existing wellbore trajectories within one-half mile of any portion of the proposed wellbore trajectory including the horizontal drilling. The true vertical depth of each wellbore identified on the map must also be indicated.
  - Operators will also provide information to the BLM on the location of the operations, geology, water resources, location of other wells or natural fractures or fissures in the area, and fracturing plans (including the estimated length, height, and total vertical depths of the fractures) for the operation in their application for permit to drill (APD).

**Cost to Operators**

The BLM estimates that the cost of the rule could reach about \$11,400 per operation or about \$32 million a year based on projected activity of 2,800 wells per year on Federal and Indian lands. On average, this expense equates to less than one-fourth of 1 percent of the cost of drilling a well, based on an estimated cost of \$5.4 million per well from the Energy Information Agency.

## Final Hydraulic Fracturing Rule

### Timeline

- November 2010 -- First Department of the Interior forum on hydraulic fracturing
- April 2011 -- The BLM held three regional forums in Arkansas, Colorado and North Dakota attended by more than 600 members of the public
- November 2011 -- National Gas Subcommittee of the Secretary of Energy's Advisory Board recommends that the BLM undertake a rulemaking to ensure well integrity, water protection, and adequate public disclosure
- May 11, 2012 -- The BLM publishes a draft rule drawing 177,000 public comments
- May 24, 2013 -- The BLM publishes a supplemental draft rule drawing 1.35 million comments
- March 20, 2015 -- The BLM publishes a final rule

### Key Issues

Like the draft and supplemental draft rules, the final regulations seek to:

- Ensure that wells are properly constructed to protect groundwater;
- Make certain that fluids that flow back to the surface as a result of hydraulic fracturing operations are managed in an environmentally responsible way;
- Provide public disclosure of the chemicals and additives used in hydraulic fracturing fluids as well as information such as the geology, depth, location and water use of the operation; and
- Improve measures to prevent cross-well contamination, commonly called "frack hits."

### How the Final Rule Addresses These Issues

#### **Protects groundwater by requiring:**

- Strong cement barriers between the wellbore carrying fracturing fluids/hydrocarbons and the groundwater zones through which the wellbore passes.
- Operators to monitor cementing and submit a report verifying monitoring 48 hours prior to beginning hydraulic fracturing operations for all wells. The report should contain specific parameters of the cement job. For intermediate or production casing strings, the operator must either circulate cement to the surface or run a Cement Evaluation Log ("CEL") demonstrating that there is at least 200 feet of adequately bonded cement isolation between the zone to be fracked and the deepest water zone.
- Operators to follow specific best practices, including demonstrating that the wellbore casing is adequate on each and every well, not just a sample (or "type") well.
- Protective standards, including cement returns and pressure testing on each well.
- An approved remediation plan for wells where cementing does not meet the standards and a CEL on all remediated wells.

**Manages fluids by:**

- Treating all recovered fluids from hydraulic fracturing operations in the same way, and requiring a standard of care for interim storage adequate to prevent damage to surface or groundwater and wildlife from any toxicity.
- Requiring interim storage of all produced water in rigid enclosed, covered or netted above-ground tanks, subject to very rare and limited exceptions in which lined pits could be used (with a leak detection system). Replaces current practice that allows for the use of pits or tanks in all cases for interim storage.

**Provides for public disclosure of chemicals by:**

- Requiring chemical disclosure to the BLM through the website FracFocus, or other designated online database, within 30 days of completion of hydraulic fracturing operations.
- Requiring the filing with the BLM of affidavits signed by a corporate officer or the equivalent responsible official of the operator to provide justification for any claim of a trade secret. The BLM retains the right to obtain any information withheld as a trade secret and to review that claim. The affidavit must also identify and provide contact information for the owner of the withheld information, if it is not the operator.
- Requiring operators to retain information that is withheld for the life of the well, or 7 years on Federal lands or 6 years on Indian lands, whichever is longer.

**Prevents frack hits by:**

- Requiring operators to submit information to the BLM so that the agency can determine the potential for cross-well contamination, commonly called “frack hits,” where the force of one fracking operation affects other nearby wells.
  - Operators must submit a map showing the trajectory of the proposed wellbore into which hydraulic fracturing fluids are to be injected and all existing wellbore trajectories within one-half mile of any portion of the proposed wellbore trajectory including the horizontal drilling. The true vertical depth of each wellbore identified on the map must also be indicated.
  - Operators will also provide information to the BLM on the location of the operations, geology, water resources, location of other wells or natural fractures or fissures in the area, and fracturing plans (including the estimated length, height, and total vertical depths of the fractures) for the operation in their application for permit to drill (APD).

**Cost to Operators**

The BLM estimates that the cost of the rule could reach about \$11,400 per operation or about \$32 million a year based on projected activity of 2,800 wells per year on Federal and Indian lands. On average, this expense equates to less than one-fourth of 1 percent of the cost of drilling a well, based on an estimated cost of \$5.4 million per well from the Energy Information Agency.

This is way too long, but wanted you to see where we're potentially going with some questions on the fracking rule. And obviously the italicized lines are simply my personal projection of what the answers might be. Can talk more about this later this week.

Director Kornze, do BLM drilling regulations preempt state rules?

*No, they do not.*

BLM has existing well construction rules, correct?

*That is correct.*

And the states where companies drill on BLM lands... do they all have well construction rules as well?

*They all do.*

If a state has a stronger well construction rule than BLM, say they require more cement than BLM does, for example, do companies follow the BLM rule or the state rule.

*In that case they would follow the state rule.*

Companies automatically follow the stronger rule, that's what you're saying?

*That is correct.*

Do companies or states need to apply for a variance to follow the stronger rule?

*No.*

They just follow the stronger rule.

*That is correct.*

Does the hydraulic fracturing rule work differently than your existing rules?

*No.*

If states have stronger fracking regulations than BLM, companies will continue to follow the state rules? Let's say a state has a higher required pressure for a casing test, or requires better water

storage tanks than what's in the BLM rule. Companies would automatically follow those requirements in that state, correct?

*That is correct.*

And they won't need to apply for a variance in order to be able to do that?

*No, there's no need for a variance.*

Let's take the case of a hypothetical state that has stronger requirements for everything in the BLM rule. Would a driller in that state have to do anything different to meet the requirements of the BLM rule?

*No. By following the state rule, they would be in compliance with the BLM rule. They would still need to submit the required information to BLM, however, which they currently do not do.*

Ok, so, in a state with stronger requirements across the board, leaving aside letting BLM know what's going on, a company wouldn't have to operate any differently?

*No, there would be no difference in how a company operates.*

Would they need a variance in order to get away with that?

*No. Just by following the rules of that state, they'd be in compliance with the BLM rule.*

But not all states with federal oil and gas leases have fracking regulations, right?

*That's correct – 32 (or so) states have active federal oil and gas leases, but only 15 (or so) states have fracking regulations.*

So in states that don't have fracking regulations, this new rule could have a real impact, right?

*That is correct.*

And in every state, whether they have regulations or not, they have to provide additional information to the BLM. The industry has argued this it will be a huge bureaucratic burden for BLM to review all this new information. Do you agree with that?

*No. We estimate that the new rule will add only four hours of additional review time for each application.*

Four hours.

*Four hours.*

That doesn't sound like a huge burden. But seems like you'll be getting some extremely valuable information. For example, can you tell me exactly how many wells were started on BLM lands last year?

2,544.

Sounds very exact. Now, can you tell me exactly how many of those wells were fracked?

*We estimate that approximately 90 percent of those wells are fracked.*

You're estimating that.

*Yes, we're estimating that.*

You don't know exactly how many wells are fracked.

*No, we do not.*

Why not?

*Companies have not been required to inform us if they're going to be using hydraulic fracturing on public lands. But with this new rule, they will have to do that.*

Seems reasonable. Can you also tell me how many of the 2,544 wells drilled on public land last year had cementing problems?

*No we cannot.*

Why not?

*Companies have not been required to inform us if they have cementing problems. But under this new rule, they will have to do that.*

You don't even know how many wells had problems with the cementing. You're responsible for protecting public lands. Don't you think it's important that you know what wells had problems during their construction?

*We do. That's why we're requiring companies to tell us that information in this new rule.*

So let me sum this up: it sounds like this rule updates woefully inadequate regulations, sets a baseline for protecting public lands in states that don't have fracking regulations, and will effectively not require companies to do anything new in states that already have strong regulations, even without a variance. For the life of me, I can't understand why the oil and gas industry has any problem with this at all.

## **One Long Fracking Question**

Director Kornze, do BLM drilling regulations preempt state rules?

*No, they do not.*

Does your new fracking rule preempt state rules?

*No, it does not.*

Do companies follow state regulations when they're on BLM lands?

*Yes they do.*

So BLM is just setting a baseline with the fracking rule, and states are free to set higher standards?

*That is correct.*

Do operators or states need variances to make that happen?

*No.*

But if a state has weaker regulations, or no regulations, companies have to follow the new BLM rules, right?

*Yes.*

Going back a step, let's say a state has a higher required pressure for a casing test, or requires better water storage tanks than what's in the BLM rule. Companies would automatically follow those requirements in that state, correct?

*That is correct.*

And they won't need to apply for a variance in order to be able to do that?

*No, there's no need for a variance.*

Let's take the case of a hypothetical state that has stronger requirements for everything in the BLM rule. Would a driller in that state have to do anything different to meet the requirements of the BLM rule?

*No. By following the state rule, they would be in compliance with the BLM rule. They would still need to submit the required information to BLM, however, which they currently do not do.*

Ok, so, in a state with stronger requirements across the board, leaving aside letting BLM know what's going on, a company wouldn't have to operate any differently?

*No, there would be no difference in how a company operates.*

Would they need a variance in order to get away with that?

*No. Just by following the rules of that state, they'd be in compliance with the BLM rule.*

But not all states with federal oil and gas leases have fracking regulations, right?

*That's correct – 32 (or so) states have active federal oil and gas leases, but only 15 (or so) states have fracking regulations.*

So in states that don't have fracking regulations, this new rule could have a real impact, right?

*That is correct.*

And in every state, whether they have regulations or not, they have to provide additional information to the BLM. The industry has argued this it will be a huge bureaucratic burden for BLM to review all this new information. Do you agree with that?

*No. We estimate that the new rule will add only four hours of additional review time for each application.*

Four hours.

*Four hours.*

That doesn't sound like a huge burden. But seems like you'll be getting some extremely valuable information. For example, can you tell me exactly how many wells were started on BLM lands last year?

*2,544.*

Sounds very exact. Now, can you tell me exactly how many of those wells were fracked?

*We estimate that approximately 90 percent of those wells are fracked.*

You're estimating that.

*Yes, we're estimating that.*

You don't know exactly how many wells are fracked.

*No, we do not.*

Why not?

*Companies have not been required to inform us if they're going to be using hydraulic fracturing on public lands. But with this new rule, they will have to do that.*

Seems reasonable. Can you also tell me how many of the 2,544 wells drilled on public land last year had cementing problems?

*No we cannot.*

Why not?

*Companies have not been required to inform us if they have cementing problems. But under this new rule, they will have to do that.*

You don't even know how many wells had problems with the cementing. You're responsible for protecting public lands. Don't you think it's important that you know what wells had problems during their construction?

*We do. That's why we're requiring companies to tell us that information in this new rule.*

So let me sum this up: it sounds like this rule updates woefully inadequate regulations, sets a baseline for protecting public lands in states that don't have fracking regulations, and will effectively not require companies to do anything new in states that already have strong regulations, even without a variance. For the life of me, I can't understand why the oil and gas industry has any problem with this at all.

## **Fracking Rule: State Preemption**

Director Kornze, do BLM drilling regulations preempt state rules?

*No, they do not.*

Does your new fracking rule preempt state rules?

*No, it does not.*

Do companies follow state regulations when they're on BLM lands?

*Yes they do.*

So BLM is just setting a baseline with the fracking rule, and states are free to set higher standards?

*That is correct.*

Do operators or states need variances to make that happen?

*No.*

So this fracking rule is really just an update to your existing rules, which companies and states have been dealing with for decades?

*That is correct.*

## **Fracking Rule: Low cost; nothing new**

Director Kornze, you estimate that your hydraulic fracturing rule will add about \$11,000 to the cost of drilling a well, which is only about two-tenths of a percent of the cost of drilling a well, at most. How is that possible?

*Most of the requirements in the rule are already industry standards, or already required by the states where most drilling occurs.*

So companies are already doing most, if not all, of the requirements that you have in your fracking rule?

*That is correct.*

That makes me wonder what the point of this rule is at all. It doesn't sound like you're raising the bar – it sounds like you're letting industry set the bar.

*In some states that is the case, but in states that don't have hydraulic fracturing rules, this rule establishes crucial baseline protections. Also, the existing BLM fracturing regulations are 30-years old and desperately needed an update.*

Well, I'm disappointed that your agency didn't take the chance to set a really protective standard, but I'm also left wondering what all the complaints are about. It makes no sense to complain about a rule that makes you do what you're already doing.

## **Fracking Rule: Information**

Director Kornze, can you tell me exactly how many wells were started on BLM lands last year?

2,544.

Now, can you tell me exactly how many of those wells were fracked?

*We estimate that approximately 90 percent of those wells are fracked.*

You're estimating that.

*Yes, we're estimating that.*

You don't know exactly how many wells are fracked.

*No, we do not.*

Why not?

*Companies have not been required to inform us if they're going to be using hydraulic fracturing on public lands. But with this new rule, they will have to do that.*

Seems reasonable. Can you also tell me how many of the 2,544 wells drilled on public land last year had cementing problems?

*No we cannot.*

Why not?

*Companies have not been required to inform us if they have cementing problems. But under this new rule, they will have to do that.*

You don't even know how many wells had problems with the cementing. You're responsible for protecting public lands. Don't you think it's important that you know what wells had problems during their construction?

*We do. That's why we're requiring companies to tell us that information in this new rule.*

### **Fracking Rule: BLM Workload**

Director Kornze, there's been some talk that the fracking rule will create a huge bureaucratic burden for BLM. Do you agree with that? How much longer will each permit review take under the new rule?

*No. We estimate that the new rule will add only four hours of additional review time for each application.*

Four hours.

*Four hours.*

That doesn't sound like a huge burden.

### **Fracking Rule: Compared to Existing Regulations**

Director Kornze, when were BLM's old regulations on fracking put on the books?

*Late 80s.*

And what did they say?

*Only that companies have to get approval from BLM to perform "nonroutine fracturing jobs".*

### **Fracking Rule: Point of the Rule?**

Director Kornze, it's very easy to show that the complaints you're hearing from the industry are completely overblown. Almost every state with significant fracking activity on public land has their own fracking regulations, and your rules reflect current industry practice. The cost to industry will be minimal, and the so-called paperwork burden is negligible. Their complaints reflect their hatred of all regulations. We get it. But I'm left to wonder – what's the advantage of issuing this rule? What extra protection do you provide to public lands because of this rule?

### **Fracking Rule: FracFocus**

Director Kornze, I share the strong concerns that a lot of people have about FracFocus, and I'm a little concerned about the fact that it's a feature of your new fracking rule. The recent announcement by FracFocus of making their data available in machine-readable format is good, but are they addressing all the shortcomings raised by the Secretary of Energy's Advisory Board? And what sort of assurances do we have that they will make the changes they're promising, and that the BLM and the public will have continued access to this data even if FracFocus goes belly-up?

### **Inspection Fees**

Director Kornze, you have a proposal in your budget to make the industry pay for the cost to inspect their operations. That's probably surprising to a lot of people. Drivers pay for their own vehicle inspections. Homebuyers pay for their own home inspections. But the industry gets taxpayers to pick up the tab. So I wholeheartedly support this proposal. I understand there may be some other benefits to charging this fee besides simply taking the burden of the American taxpayers – could you describe those?

*The fee provides an additional incentive for companies to properly plug and abandon wells, particularly since they'd pay a higher fee the more wells there are on a site.*

## **Onshore Production and Ft. Berthold**

The rhetoric on oil and gas production on public lands from the Majority has shifted a bit recently. Some of them now acknowledge that oil production on federal lands is increasing – in the Rocky Mountain States it has increased by over 40 percent since President Obama took office – but they'll say it's not increasing fast enough! The increase on private lands has been a lot greater, they'll point out. Is it possible this has anything to do with where the resources are?

*Absolutely. The big shale plays in the country – the Bakken, Eagle Ford, Marcellus, etc. – are largely on non-Federal lands, as the head of the Energy Information Administration has repeatedly pointed out.*

Let's look at one place in particular – the Ft. Berthold Indian Reservation in North Dakota. Who approves drilling permits for Ft. Berthold?

*The BLM.*

And what has been the increase in oil produced from tribal lands since 2008?

*It has more than quadrupled – it's up 466%.*

Is that more or less than the rest of the nation?

*Considerably more. Total national oil production is up about 84% since 2008.*

So the BLM approves the permits, and they're able to support an increase in production of over 460 percent? I don't think the issue here is with the BLM.

## Onshore Royalty Rates

Director Kornze, I understand the Bureau is close to publishing an Advance Notice of Proposed Rulemaking to look at potential changes to onshore oil and gas royalty rates – is that correct?

*Yes. We recently sent the ANPR to the Office of Management and Budget.*

Thank you for doing that. I joined dozens of my colleagues on a letter last summer asking for that to happen, so I'm glad that you're moving forward on this. The current onshore royalty rate is 12.5 percent. Isn't that kind of low for a royalty rate?

*Yes. Most state and private royalty rates are between 18.75 and 25 percent.*

And the royalty rate offshore is also higher than the federal onshore rate, isn't it?

*Yes. It's 18.75 percent for most leases.*

Has the offshore rate always been at that level?

*No. It was at 12.5 percent for decades, then President Bush raised it to 16.67 percent in 2007 and 18.75 percent in 2008.*

Some members of the Majority have expressed their concern that raising the royalty rate results in a drop in production and overall revenue. Do you know if the Department saw that offshore after the royalty rate was raised?

*No. There was a drop in production after the huge offshore fireball and oil spill [she won't say that], but production is going back up and projected to continue rising to record levels in 2016.*

Did the Department have to undergo a rulemaking to raise the offshore royalty rate?

No.

Why not?

*Because the offshore regulations provide the authority to change the royalties for each offshore sale. The onshore regulations set the royalty at exactly 12.5, so a regulatory change is needed.*

This seems like the Bureau tied its own hands when it wrote these regulations many years ago. It seems to me that the onshore royalty rate should, at a minimum, be the same as the offshore royalty rate. But I hope you will give yourself the flexibility to change the rates more quickly when conditions warrant.

*We certainly will welcome that comment when the ANPR is published.*

And if I can ask about rental rates— those are very low as well, aren't they?

*They are \$1.50 an acre for the first five years of a lease, and \$2 an acre for the second five years.*

A buck fifty an acre? So I could go downstairs and get myself a cup of coffee, or I could reserve the mineral rights on an acre of public land for a year?

*Well, it's a little more complicated than that...*

I'm sure, I'm sure, but still, that's just mind-boggling. I hope you look at rental rates at the same time you're looking at royalties.

## Leasing, Drilling, and Shut-Ins

Director Kornze, there's been a lot of debate here about whether the Department is issuing enough leases, or approving enough permits, to satisfy industry's demand. So I want to make sure I'm clear on some of the stats here. How many acres of new leases did BLM offer last year?

*Just under 1.2 million acres. [Offshore: 2.1 million; Total: 3.3 million]*

So how many total acres onshore are currently under lease?

*Approx. 34.6 million acres. [Offshore: 32.2 million; Total: 66.8 million, roughly the size of the State of Colorado]*

And how many of those acres are currently producing oil and gas?

*About 12.7 million, or 37%. [Offshore: 5 million (15%); Total: 17.7 million (26%)]*

So it sounds like oil and gas companies have access to tens of millions of acres of public land that they haven't gotten around to producing on yet.

How about drilling permits? How many drilling permits did the BLM approve last year?

*3,769 (just Federal; including Indian lands it's 4,389)*

And how many wells did companies start drilling on public lands?

*2,544*

So with all this concern that BLM isn't issuing permits fast enough, they were still able to approve 1,200 more permits than companies even used last year? How many total permits are there out there that companies are holding on to but not using?

*As of the end of Fiscal Year 2014, BLM had approved 5,919 permits that companies had not begun drilling on yet.*

Companies are holding onto nearly 6,000 approved drilling permits they could use as soon as they want, and they're waiting? Well, forgive me if I'm not too sympathetic to complaints that BLM isn't getting these things out the door fast enough.

When companies don't drill on their permits, does that seem to be related to so-called onerous federal regulations and bureaucratic red tape, or is that a business decision made by the company based on economics?

*We find that companies make individual drilling decisions based on economics and the location of the greatest resource.*

Right, it's about economics. And right now, with the price of oil low, companies would rather speculate than drill – they'd rather sit on their leases and drilling permits until the price of oil rises. Just last week there was an article titled, "Top drillers say they'll sit on wells until prices go back up." In it, the CEO of one of the largest oil and gas companies in America said, "We're intentionally holding production back in 2015, because we believe it's the prudent thing to do."

That's their choice. For them, as you would expect, profits are the most important thing, so they're going to sit on these wells until the price goes up. And companies across the country are making the same decisions – don't lease, don't drill, don't produce. Yet you're pressured by the Majority to constantly lease more, permit more, produce more. I don't think that's the right strategy at any price, but it's particularly ridiculous now.

### **BLM Permit Timing Rationale**

Are states or private landholders statutorily required to consider multiple uses of the land?

*No*

Are states or private landholders statutorily required to conduct NEPA reviews on drilling proposals?

*No*

Now, I know that to the Majority, this is horrible: Exhibit A and B for why the states should be allowed to seize public lands. But I think these are good things, and exactly what the American people demand for their public lands. These lands belong to all Americans, and they want the federal government to consider other values besides who's writing the largest check for the drilling rights. They want us to consider where people should be able to hunt, or fish, or bask in the scenic beauty of our iconic landscapes. They want there to be an open process that allows for public input. If that means the oil and gas companies have to wait a little bit before drilling for oil, so be it.

### **Electronic Permit Submission**

Director Kornze, what's the timeline for rolling out the electronic permit submission system that the BLM is working on? And what potential impact is this going to have on permit review times?

### **Coal & Solid Mineral Tracking System**

Director Kornze, the proposal in the budget for \$2.2 million to create an electronic coal and solid mineral tracking system makes me wonder – how are you tracking them now? Do you not have a computerized system for keeping track of coal leases?

## **Orphaned Wells & Bonding**

Director Kornze, one month ago the Wall Street Journal had an article about how companies can just up and walk away from wells they own—making them so-called ‘orphaned’ wells—and then it’s up to the state or BLM, which really means the taxpayers, to clean these things up. The article mentions that the only money a company needs to have on file with the BLM is \$10,000 per well, or \$150,000 to cover all the wells a company owns nationwide, which could be thousands of wells. This is clearly a wildly insufficient amount of money to dissuade a company from just walking away if their costs get too high. What is the BLM doing to try to fix this situation, and make sure taxpayers aren’t left holding the bag?

## **Competitive Leasing for Renewable Energy**

As you know, Director Kornze, the competitive leasing process is the best way to ensure that the taxpayers are receiving fair market value for the use of their lands. For example, look at the recent Dry Lake solar energy zone pilot competitive sale. This single sale brought in \$5.8 million, nearly the same amount brought in by all solar projects the previous year. Could you tell us a bit about what the Bureau is doing to expand competitive leasing for renewable energy.

*[He will describe the Draft Competitive Leasing rule for Wind and Solar]*

What concerns me is that this rule only goes halfway, and doesn’t address how revenues are shared. The Public Lands Renewable Energy Development Act, which I cosponsored last congress, directs new revenues to state and local governments, as well as conservation efforts. Does the Bureau support legislation to share new revenues from renewable leasing with the states and counties who host these new developments?

*[He will likely express qualified support for the legislation but seek to work with Congress to come up with a legislative solution to the issue.]*

## **Royalty-Free Gas**

Director Kornze, while some of my colleagues have talked about what they consider to be unfair subsidies given to the renewable energy industry, I think it's only fair to point out some of the subsidies that the oil and gas industry receives. Of course there are many. But I would like to focus on royalty-free gas consumed by operators within the area of their lease – so called “beneficial use gas.” This gas is about 2% of all the gas sold, which doesn't sound like much, but it could bring in tens of millions of dollars in royalties per year. Is it true that beneficial use gas is always royalty free? And are there any limits?

*Yes, always royalty free. It has to be, regardless of volume, due to law. Mineral Leasing Act says royalty on gas “removed or sold” from lease.*

Well, I think is a loophole that is too easy to exploit. This is a resource that belongs to the American people, and they deserve to get their fair share of that, whether or not a company decides to use it within the somewhat arbitrary boundaries of a lease.

## **Alaska: Greater Mooses' Tooth**

Director Kornze, I'm a little concerned about the recent approval your agency gave to ConocoPhillips to construct a road and a well pad in the National Petroleum Reserve in Alaska. Particularly concerning is how this could signal the start of an entire spider web of roads leading throughout the Reserve. How seriously did your agency consider requiring the well pad without roads, which has been done elsewhere on the North Slope? Why didn't you require them to go with this roadless option, and why did you approve a road that goes right through the supposedly off-limits Fish Creek setback area?

# Subcommittee on Energy and Mineral Resources

Doug Lamborn, Chairman

Hearing Memo

March 24, 2015

**To:** All Natural Resource Committee Members

**From:** Subcommittee on Energy and Minerals Staff (x5-9297)

**Hearing:** Oversight budget hearing titled the *“Effect of the President’s FY 2016 Budget and Legislative Proposals for the Bureau of Land Management and the U.S. Forest Service’s Energy and Minerals Programs on Private Sector Job Creation, Domestic Energy and Minerals Production and Deficit Reduction.”*

---

The Subcommittee on Energy and Mineral Resources hearing will take place on **Thursday, March 26<sup>th</sup> at 9:30 A.M. in Room 1324 Longworth House Office Building**. This hearing will focus on the budget proposals put forward by the U.S. Bureau of Land Management and the U.S. Forest Service, with particular focus on each entity’s leasing activities, as well as their exploration and production of energy.

## Policy Overview

- The regulatory and legislative proposals put forth by the Bureau of Land Management seek to increase fees and further burden energy production on federal lands at a time when oil and gas prices are at record lows.
- The hydraulic fracturing rule finalized on March 20, 2015 is duplicative of existing state regulations and will further discourage and delay production on federal lands.
- Although oil production has increased on *onshore* federal lands, this has occurred despite the actions of this administration, as the BLM currently averages the number amount of new leases for the least amount of acreage compared to the prior three administrations.
- The U.S. Forest Service has decreased by over 50% the amount of mineral applications it has processed since 2009, which in turn has led to a 30% drop in the number of mineral operations it administers.
- The Obama Administration seeks to cut the budget of key programs within the U.S. Forest Service, which will decrease the agency’s responsiveness to develop lease plans on national forests and national grasslands – and could lead to a decrease of \$42 million in revenue for the U.S. Treasury.
- Since 2009, coal production on federal lands has fallen from approximately 460 million tons produced annually to 400 million tons, while natural gas produced has decreased from 3.167 trillion cubic feet to 2.477 trillion cubic feet.

## **Witnesses Invited**

### **Neil Kornze**

Director, Bureau of Land Management

### **Tom Tidwell**

Chief, U.S. Forest Service

## **Hearing Focus**

This hearing will focus on the spending priorities outlined in the President's FY 2016 budget justifications for the U.S. Bureau of Land Management (BLM) and the U.S. Forest Service (USFS). It will examine how the agencies' projected activities and spending priorities will affect energy production in our nation.

Currently, *onshore* federal production of oil on BLM managed lands has increased from 104 million barrels in FY 2009 to 148 million barrels in FY 2014.<sup>1</sup> That said, the increase in oil production is not indicative of the Obama Administration's policies, but despite them. Indeed, of the 46,183 currently active federal leases only 9,922 (**21.5%**) at most were approved under this Administration.<sup>2</sup> Supporting this is the calculation that the average age of current active leases is at the very least 12.6 years. Therefore, it is conclusive that the majority of the leases currently in effect and producing on federal lands were signed under prior administrations, and that the increase in production is more a testament to those administrations' desire to offer leases and the sheer resilience of those lessees who have achieved production.

The proposed budgets will be used to enforce and implement the costly regulations, such as the BLM's hydraulic fracturing rule and the proposed increase in royalty rates for new onshore leases, which are poised to arrive at a time when oil and natural gas prices are at 5-year lows. BLM's own estimate for compliance with the final hydraulic fracturing rule indicated a cost to industry of over \$32 million per year.<sup>3</sup> Independent estimates have suggested the rule could cost over \$300 million per year.<sup>4</sup> These regulations could strike a crippling blow to the industry that has been at the heart of the nation's oil and gas boom, helping with recovery from the economic downturn.

<sup>4</sup> <http://www.westernenergyalliance.org/wp-content/uploads/2013/07/Final-Economic-Analysis-of-the-BLM-Fracing-Rule-Revision.pdf>.

This hearing will ensure that the BLM and USFS are held accountable for their funding requests, that this funding is allocated in a way that promotes energy development on federal lands, and that safe operations continue without duplicative and overly bureaucratic new regulations.

**Bureau of Land Management (BLM)**

FY15 President’s Request	\$1.113 Billion
FY15 Enacted	\$1.212 Billion
<b>FY16 President’s Request</b>	<b>\$1.352 Billion</b>

The BLM and its 9,745 employees exclusively manage over 247.2 million acres of land and nearly 700 million acres (approximately one third) of the nation’s on-shore mineral estate.<sup>5</sup> The BLM’s jurisdiction allows it to dictate uses of public lands for activities such as recreation, wildlife and open space, but also requires the BLM to ensure the production of energy and minerals, forage, forest products, and other goods to the Nation.

BLM has requested an increase of \$140 million for FY 2016 over the FY 2015 enacted amount.<sup>6</sup> This funding increase includes:

- \$3 million (+25 full time equivalents (FTEs)) for Oil and Gas Pilot/Project Offices to implement the hydraulic fracturing regulation, and reduce the backlog of applications for permit to drill (“APD”).<sup>7</sup>
- \$6.874 million (+15 FTEs) for the initiation of new oil and gas inspection fees, which the BLM anticipates to generate \$48.0 million in collections at a cost to industry.<sup>8</sup>
- \$37 million (+20 FTEs) for the implementation of Sage-Grouse Conservation Plans, which aim to restore and conserve habitat across 27 priority areas in 11 states.<sup>9</sup>

**Decreased Leases for Decreased Acreage**

For BLM’s *Oil and Gas Management sub-activity*, the BLM seeks total \$66.796 million and 372 FTEs.<sup>10</sup> This sub-activity is responsible for oil and gas management, including leasing, and inspections on BLM managed land.

As the charts on the following page demonstrate, the BLM has issued on average **56.4%** fewer leases per year than were issued during the Clinton Administration for **53.0%** less acreage. As evidenced by these percentages BLM has continued to diminish its offerings of leases and available acreage. These limited offerings have led to a decrease from FY 2009 to FY 2014 in

<sup>9</sup> *Id.* at VII-64.

<sup>10</sup> *Id.* at VII-95.

active leases from 53,431 in to 46,183, and a decrease in acreage leased from 45,364,991 to 34,592,450. Likewise, the total number of APDs approved for federal land has fallen from 4,487 to 3,769 and the number of new wells spud each year has fallen from 3,267 in FY 2009 to 2,544 in FY 2014.<sup>11</sup> The budget justification does not propose anything to counter this troubling trend.

Source: Bureau of Land Management, Summary of Onshore Oil and Gas Statistics 1988 - 2014

A common argument forwarded by the Obama Administration in defense of the plunging acreage is that industry is not interested in leasing the land offered; for instance, in FY 2014 only 919,738 acres of a total 5,683,736 received bids.<sup>12</sup> This argument is overly broad and excludes two key considerations: 1) whether those areas available for lease have economically recoverable resources; and 2) whether regulatory certainty exists in the areas available for lease.

For instance, 4,458,146 of the acres offered in FY 2014 were in the “National Petroleum Reserve – Alaska,” an area that has yet to produce under any federal regime, despite being offered for lease since 1999.<sup>13</sup> Compared to the acreage in Wyoming that was offered by BLM – a state that has a high potential for economically recoverable resources, and the only approved Greater Sage Grouse management plan – it is understandable why there exists such disparity in the percentage of lands receiving bids. Excluding the NPRA acreage, the BLM in FY 2014 only offered 1,225,590 acres, of which 674,085 (55.0%) received bids.

Oil and Gas Lease Sales FY 2014*

Furthermore, once a producer has obtained a lease, it takes anywhere from four years (for small to medium sized projects) to nine years (for large projects) to go through the environmental review as required by the National Environmental Policy Act (NEPA). On top of this, the average length of time to obtain an approval for an APD was 227 days in FY 2014 – for comparison, it takes about 30 days for a state to approve an APD.<sup>14</sup> Thus, due to the overly burdensome regulations promoted by the BLM, it can take five years – at a minimum – for a producer to be able to drill a producing well.

More Money for Less Mining

The BLM proposes a \$1.273 million increase in its Coal Management sub-activity, bringing the total requested for FY 2016 to \$10.868 million.<sup>15</sup> This increase comes despite the decrease in production of coal on federal lands.

Currently, the BLM operates 309 federal coal leases covering 474,025 acres of land, an overall increase in both number of leases and acreage from FY 2009.<sup>16</sup> Despite this uptick, the amount of coal mined on federal land has decreased from 462 million tons of coal in FY 2009 to 402 million tons of coal in FY 2014.

Furthermore, the FY 2016 budget request for Mining Law Administration is \$39,696,000 and 319 FTEs.<sup>17</sup> The budget assumes the program’s operating cost will be fully offset by revenue from mining claim maintenance and location fees. Claim location and maintenance fees were

---

<sup>14</sup> Bureau of Land Management, Average Application for Permit to Drill (APD) Approval Timeframes: FY 2005 – FY 2014, [http://www.blm.gov/wo/st/en/prog/energy/oil\\_and\\_gas/statistics/apd\\_chart.html](http://www.blm.gov/wo/st/en/prog/energy/oil_and_gas/statistics/apd_chart.html).

<sup>15</sup> U.S. Bureau of Land Management, FY2016 Budget Justification, at VII-109.

<sup>16</sup> *Id.* at VII-109 to VII-110.

<sup>17</sup> *Id.* at VII-195.

adjusted per law according to the Consumer Price Index for the assessment year beginning September 1, 2014, from \$34 - \$37 (location) and \$140 - \$155 (maintenance) per claim. This adjustment led to the dropping of 48,867 claims, at a cost to the federal government of more than \$8.5 million in revenue.<sup>18</sup>

### Burdensome Legislative Proposals

The BLM has several legislative proposals affecting all areas of its jurisdiction, including: the enactment of *oil and gas inspection fees* and a *hardrock abandoned mine land (“AML”) fund*.

The legislative proposal for *oil and gas inspection fees* would require lessees to pay a fee to the BLM for inspection activities. The proposed fee would start at \$700 for each lease or unit of land with no active or inactive wells, and increase to \$9,800 for those leases that have over 50 active or inactive wells.<sup>19</sup>

The *hardrock abandoned mine land fund* would levy a fee on the production of hardrock minerals on both public and private lands. The revenues from this fee would be split between federal and non-federal land actions, with the non-federal funds being directed at the discretion of the secretary to states and tribes.<sup>20</sup>

These and other legislative proposals should be disregarded until the BLM demonstrates effective implementation of legislation that it has supported. For instance, the Helium Stewardship Act was passed to ensure privatization of the federal government’s helium reserve through a *competitive*, market-driven process. BLM held its first helium auction on July 30, 2014, which generated \$14.9 million for the U.S. Treasury. This auction represented 10% of the amount to be sold for delivery in FY 2015.<sup>21</sup> Subsequent to this auction, the BLM offered for sale the remaining 90% of the helium to be delivered in FY 2015, but limited its purchase only to a select group of helium users. BLM asserts this limitation was done pursuant to BLM’s interpretation of the Act. However, this misinterpretation led to a result in direct conflict with the inherent purpose of the act, which was to promote competition and wider access to the federal helium reserve. Instead, BLM’s interpretation cut in half the number of helium purchasers from the prior year.

<sup>21</sup> Bureau of Land Management, First Federal Helium Auction Generates Over \$14 Million for US Treasury, [http://www.blm.gov/nm/st/en/info/news\\_releases0/2014/july/first\\_federal\\_helium.html](http://www.blm.gov/nm/st/en/info/news_releases0/2014/july/first_federal_helium.html).

## U.S. Forest Service (USFS)

FY15 President's Request	\$6.456 Billion
FY15 Enacted	\$5.547 Billion
<b>FY16 President's Request</b>	<b>\$6.489 Billion</b>

The USFS's FY 2016 Budget Justification seeks an increase in \$942 million over the FY 2015 enacted amount and an increase of 151 FTEs.<sup>22</sup> Although the USFS manages 10% of the continental land base, and cooperates with the BLM in the development of the resources found thereunder, the overall increase of the USFS's budget is not reflected in the programs charged with managing resource development on national forests and national grasslands.

For FY 2016, the USFS seeks an 8% decrease of \$5.734 million (and 13 FTEs) for its Minerals and Geology Management budget line item, and an 8% decrease of \$6.129 million for the Landownership Management line item.<sup>23</sup> The USFS's budget justification provides that for "every appropriated dollar invested in the Forest Service minerals and geology budget returned \$7.35 to the Treasury from leasable mineral revenues alone."<sup>24</sup> Thus, the proposed cuts to these key areas could cost the treasury over \$42 million. These calculations do not include the amount of money states will lose due to their 25% or 50% share of resource revenue produced from USFS lands. Finally, natural resource production on USFS lands contributes nearly \$8 billion annually to the nation's economy, and provides for 56,000 jobs throughout the country.<sup>25</sup>

In FY 2013, the coal produced from USFS lands comprised 25% of total production in the United States.<sup>26</sup> However, that production is on the decline and under attack. Recent court cases, and the heightened classification of public land as "*No Surface Occupancy*," threatens production of coal on USFS land, and calls into question whether the USFS will continue to provide 25% of all coal production.

Like the BLM, the USFS has seen a stark decrease in the number of mineral operations it administers and the number of mineral applications it processes. As the chart demonstrates, the total number of mineral operations administered has decreased from 14,613 in FY2009 to 10,175 in FY 2014, while the number of mineral applications processed has decreased from 11,187 in FY 2009 to 5,722 in FY 2014.<sup>27</sup> The proposed cuts by the administration will only continue this downward trend and will not clarify the confused state of resource production on federal lands.

**March 26, 2015**

Thank you very much, Mr. Chairman. And thank you, Director Kornze and Chief Tidwell, for making your second trips to this room in one week. With agencies that have such broad and complex missions as your own, there is plenty for all of us to be interested in, and we appreciate you both taking the time to be here again.

One of the things that I know there is a particularly great deal of interest in is the Bureau of Land Management's recently released rule on hydraulic fracturing. Now, after having heard the industry's complaints about this rule, and if I knew nothing else about it, I would think that this rule was an earthshattering change, so to speak, in the way that BLM and industry did business, and that there was going to be a huge crackdown on fracking on public lands.

Frankly, that might not be so bad.

But that is just not true. I have been studying this rule, and the complaints are so overblown that I have to wonder what color the sky is in their world.

Because, in the real world, this rule is just a modest update to existing BLM regulations to reflect how the industry operates today.

I challenge the industry to point to the requirements in this rule that they don't already do. Even for the closed tanks requirement, most companies on federal land already do that too.

Then there is the complaint that this rule steps all over the states' authority to regulate fracking.

Except, it doesn't.

Forget the state variance provision in the rule. Even without that, there is no conflict between state and federal regulations.

Because federal rules do not preempt state rules, even on federal land.

If a state rule is stronger, and many of them are, companies will follow the state rule. End of discussion.

Right now, the states and BLM both regulate well construction, surface disturbance, how to handle produced water, and many other components of oil and gas drilling.

Yet somehow, companies and states are able to deal with that situation, and the sky does not fall.

The new BLM rule is just an extension and update of the existing 30-year-old rules.

I know that much of the industry, and many of the states, and many of my colleagues on the other side of the aisle would prefer that BLM just had no rules whatsoever regulating oil and gas activities. Leave it all up to the states.

But that's not responsible. That's not what we are here to do. We are here to weigh the public interest on America's public lands. That's the PUBLIC INTEREST, and that's ALL AMERICANS, not only the interest of one industry, no matter how generous their campaign donations may be.

So let's think about this: BLM has been entrusted by Congress to oversee and manage public lands differently than private or state lands.

Private and state lands do not have to be managed for the multiple uses, multiple values, and future generations that our shared public lands require.

There is no statutory responsibility for states or private landowners, as BLM does, to protect the scientific, scenic, historical, water resource, ecological, recreational, or environmental values of the lands that they own.

There is no guarantee of public input through the National Environmental Policy Act for activities that happen on private or state lands.

So yes, BLM does have a more complex job, because BLM does have those responsibilities, and more. So for BLM not to develop commonsense rules to manage oil and gas development on public lands would be a gross dereliction of its statutory duty, and a breach of trust with the American people.

The furor over this new rule will die down, and the industry will eventually admit – if not by word, then by action – that this rule really doesn't change anything, and is probably a really good business practice.

But I hope we never lose sight of the fact that public lands are not private lands. They are special: they are owned by all American people, and are deserving of a higher standard of care.

Thank you Mr. Chairman, I yield back.

Hi Jamie,

Hope you are well. I will be in Montana next week, in Billings, and, am wondering if someone would be available to meet with me to discuss a few priorities (Sage Grouse, HF Rule, WSA Releases in NDAA Lands Package).

I'm pretty free most of the day on Thursday April 9<sup>th</sup>. Does sometime that day work?

Thanks and hope to catch up.

Hello, Meghan!

I'm the new Chief of Communications for the BLM Montana/Dakotas State Office.... just in my second week on the job. Previously, I was with the NPS as the Chief of Public Affairs at Yellowstone.

Jamie asked me to reply to your inquiry.

She - along with much of the rest of the management team - will be in Red Lodge on Thursday. If your travels take you that direction, Jamie would be happy to take time to meet with you.

Otherwise, she will be back in Billings on Friday and would work to meet with you then or even over the weekend if that works for you.

Lucy,

I am following up on Lara's voice mail yesterday regarding a potential briefing on the BLM's hydraulic fracturing rule. We would like to hold the briefing during the week of April 20 and were hoping you may be able to assist us in setting that up.

Please give me a call at your earliest convenience, or let me know if there is someone else I should work with on this.

Thanks!

Jill

Hi Lucy,

We are tentatively planning to bring Linda Lance, BLM Deputy Director for Programs and Policy and David Haines, Deputy Assistant Secretary for Lands and Minerals (assuming we can schedule for a time when both are available), along with one or two others. We were hoping to hold the briefing in the Capitol visitors center to accommodate potentially high levels of interest, and we were hoping SENR majority would be willing to host us. We obviously want to get something scheduled early enough to get a room and to give people adequate notice - so if you think next week will be soon enough, that's great - or we can reach out to someone else on your staff (or to HNR) tomorrow if you would recommend we try and schedule it right away.

Thanks!

Hi Lucy,

If possible, we would like to schedule the briefing for Thursday, April 23 from 10:30 to 11:30 in the Capitol Visitors Center.

Please let me know if you are able to assist us, or if there is someone else I should work with on this request.

Thanks for your help-  
Jill

**Cc:** "Moran, Jill" <[jcmoran@blm.gov](mailto:jcmoran@blm.gov)>

Hi Lucy,

We are tentatively planning to bring Linda Lance, BLM Deputy Director for Programs and

Policy and David Haines, Deputy Assistant Secretary for Lands and Minerals (assuming we can schedule for a time when both are available), along with one or two others. We were hoping to hold the briefing in the Capitol visitors center to accommodate potentially high levels of interest, and we were hoping SENR majority would be willing to host us. We obviously want to get something scheduled early enough to get a room and to give people adequate notice - so if you think next week will be soon enough, that's great - or we can reach out to someone else on your staff (or to HNR) tomorrow if you would recommend we try and schedule it right away.

Thanks!

Lara

Lucy,

I am following up on Lara's voice mail yesterday regarding a potential briefing on the BLM's hydraulic fracturing rule. We would like to hold the briefing during the week of April 20 and were hoping you may be able to assist us in setting that up.

Please give me a call at your earliest convenience, or let me know if there is someone else I should work with on this.

Thanks!

Jill

Will this work?

The Bureau of Land Management would provide a briefing to congressional staff, followed by a question and answer session, on the agency's final hydraulic fracturing rule.

<[Chelsea\\_Thompson@energy.senate.gov](mailto:Chelsea_Thompson@energy.senate.gov)> wrote:

**Copy-pasted from the CVC Room Reservation System Guidelines:**

**EVENT DESCRIPTION**

The event description is the single most important piece of the room request. To ensure a rapid response, submit a description which includes the following elements:

- The type of activity that will take place
- Who will conduct the event
- Who the audience will be
- The Senator's/Officer's role
- How the event relates to Senate business

A description does not have to be lengthy to be effective. The following are hypothetical examples that include the above elements.

- Members of the Senate will be invited to brief the group on the Healthy Hunger-Free Kids Act. Will be open to all Congressional Members and their staff. The purpose of the briefing is to share success stories around updates to school food programs coming out of the Healthy Hunger-Free Kids Act, and to highlight new research coming out of the Kids Safe and Healthful Foods project demonstrating the need for upgrading kitchen equipment and infrastructure in schools.
- The American Energy Society would brief the Senator and staff on trends in renewable energy. This relates to the Senator's work on S.\_\_\_\_\_. We expect Senate staff and industry officials in attendance.
- This is a dinner meeting with the Jones Group where multiple Senators, staff, and industry representatives will discuss recent legislation on tax reform, specifically S.\_\_\_\_\_.

Hi Jill -

We like to have these sponsored jointly, Majority and Minority, so I am adding Spencer Gray. I am also ccing Chelsea Thompson, a staff assistant on the Majority who will check to see if we can get a room on that date for that time.

Once Chelsea hears back and we know this is okay with Spencer, we'll get it squared away.

Thanks, Lucy 224-2878

Hi Marty,

I was given your contact by OOGA regarding an issue we've been working for a few months involving parcels on the Wayne National Forest. Basically, your company and SOOGA reached out to us, frustrated with the permitting process on federal land. In order for us to move forward with the request, we need the EOI numbers for each of your parcels in the Wayne, since everything prior to 2014 remains private. If you have any questions or concerns, please give me a call: (b) (6) .

Thanks,

Hi Jill,

Typically, in hopes of getting as many people to attend/be aware of (at least) briefings sponsored by the Committee, I circulate an email announcement to senate energy LA's (or committee la's only if that's preferred, its totally up to you). Please see the examples of announcements I have sent in the past and provide me with the information I will need to put your event invite/announcement together (2 examples listed as EX. 1 and EX. 2):

**EX. 1:**

**The Senate Committee on Energy & Natural Resources  
encourages you to attend a joint staff briefing on the  
issue of  
*Changes to Defense Nuclear Waste Disposition*  
Friday, April 17, 2015**

**10:00 a.m.**

**SD-366**

On March 24, 2015, President Obama issued a Presidential Memorandum titled, *Disposal of Defense High-Level Radioactive Waste in a Separate Repository*. This action is a shift from nuclear waste policy first set in place in 1985 that dictated that high level defense wastes and spent nuclear fuel would be comingled in a single repository – designated by Congress to be Yucca Mountain.

This briefing will provide background on defense waste and nuclear waste disposition and an explanation of the Administration's recent actions.

**Presentations will be offered by:**

***John Kotek, Principal Deputy Assistant Secretary, Office of Nuclear Energy***

**For additional information, please contact Brianne Miller (4-5269), or Rory Stanley (4-0883).**

**EX. 2:**

**The Senate Committee on Energy & Natural Resources  
encourages you to attend a joint-sponsored briefing on the issue  
of**

***Cybersecurity***

**Monday, March 9, 2015**

**2:00 p.m.**

**SD-366**

The electric grid is often cited as the nation's most critical infrastructure. The Chairman and Ranking Member of the Senate Energy and Natural Resources Committee invite you to a bipartisan briefing on the security of the electric grid that will explore how existing regulations and new partnerships are helping to advance cybersecurity for this industry.

The briefing is for staff handling energy, cybersecurity, and homeland defense issues, and

will feature representatives from the government agencies, regulatory bodies, and the electric utility industry who all share a responsibility to protect the North American electric grid. This partnership is bringing government and industry together to deploy new tools that improve situational awareness and information sharing, while plans and exercises are helping to coordinate response to incidents. The briefers will discuss the existing regulatory structure, the new initiatives, and the role proposed legislation will play in improving cybersecurity for this, and all, critical infrastructure sectors.

**Presentations will be offered by:**

**Patricia Hoffman**, Assistant Secretary, Office of Electricity Delivery & Energy Reliability, U.S.  
Department of Energy

**Mike Bardee**, Office Director, Office of Electric Reliability, Federal Energy Reliability Commission

**Gerry Cauley**, President & CEO, North American Electric Reliability Corporation

**Joy Ditto**, Senior Vice President, Legislative & Political Affairs, American Public Power  
Association

**Scott Aaronson**, Director, Governmental Affairs, Edison Electric Institute

**For additional information, please contact Kellie Donnelly (4-9360), or David Gillers (4-2209).**

**Chelsea Thompson**

**The Senate Committee on Energy & Natural Resources  
encourages you to attend a joint staff briefing on the issue of  
*Hydraulic Fracturing on Federal and Indian Lands***

**Thursday, April 23, 2015**

**10:30 a.m.**

**Room?**

On March 26, 2015, the Bureau of Land Management (BLM) published its final rule for hydraulic fracturing on Federal and Indian lands in the Federal Register. The rule, effective on June 24, 2015, updates the BLM's requirements for well-bore integrity, wastewater disposal and public disclosure of chemicals.

The briefing will provide background on the regulations, followed by a question and answer session.

**Presentations will be offered by:**

**David Haines, Deputy Assistant Secretary for Land and Minerals, Department of the Interior**

**Linda Lance, Deputy Director for Programs and Policy, Bureau of Land Management**

**For additional information, please contact xxx.**

**From:** Thompson, Chelsea (Energy)  
**To:** [Moran, Jill](#)  
**Subject:** FW: Draft Invite for BLM Brief  
**Date:** Thursday, April 16, 2015 3:11:06 PM

---

Hey Jill,

First of all: thanks so much for whipping-up such a great invite. Makes my job a teensy bit easier ☺!

Below (bottom of email chain) is the draft version of what I would like to circulate. Nothing is different from what you sent me earlier minus the addition of the room number and staff contact info.

Now, I am just waiting for Lucy/Spencer to get back to me regarding which number(s) I may use for this... so once that happens, I will circulate on the senate side. I will ask Lucy about what the best way of getting this to relevant house staff is and will follow-up with you after I get an answer.

Thanks!

**Chelsea Thompson**

**10:30 a.m.**  
**SVC-215**

On March 26, 2015, the Bureau of Land Management (BLM) published its final rule for hydraulic fracturing on Federal and Indian lands in the Federal Register.

The rule, effective on June 24, 2015, updates the BLM's requirements for well-bore integrity, wastewater disposal and public disclosure of chemicals.

The briefing will provide background on the regulations, followed by a question and answer session.

**Presentations will be offered by:**  
**David Haines, Deputy Assistant Secretary for Land and Minerals, Department of the Interior**  
**Linda Lance, Deputy Director for Programs and Policy, Bureau of Land Management**

**For additional information, please contact Lucy Murfitt (4-2878) or  
Spencer Gray (4-4971).**

issue of**

***Hydraulic Fracturing on Federal and Indian Lands***

**Thursday, April 23, 2015**

**10:30 a.m.**

**SVC-215**

On March 26, 2015, the Bureau of Land Management (BLM) published its final rule for hydraulic fracturing on Federal and Indian lands in the Federal Register.

The rule, effective on June 24, 2015, updates the BLM's requirements for well-bore integrity, wastewater disposal and public disclosure of chemicals.

The briefing will provide background on the regulations, followed by a question and answer session.

**Presentations will be offered by:**

**David Haines, *Deputy Assistant Secretary for Land and Minerals, Department of the Interior***

**Linda Lance, *Deputy Director for Programs and Policy, Bureau of Land Management***

**For additional information, please contact Lucy Murfitt (4-2878) or Spencer Gray (4-4971).**

Yep. We never send anything to just subcmte LAs since all members are welcome at any hearing. (And if I ever want to just send to EMR subcommittee LAs for whatever reason, I do it by hand because it's probably super-minor and all the leadership offices are on the All-LAs lists.)

Bill and Steve,

Following is an announcement for our April 23 briefing on the Hydraulic Fracturing Rule at the Capitol Visitors Center. Would you mind sharing it with Committee Staff, Committee LAs, and others as appropriate?

Please call me if you have any questions.

Thank you for your assistance,

Jill

Hello Jason,

This is Jamie from the Senate Appointment Desk in the CVC. April 23, you have reserved SVC215 from 10:30-11:30 for the Department of the Interior, Bureau of Land Management. I am writing to inform you that we will need a list of all people coming in for this function who do not possess a Congressional ID. Please submit your list the day before your event by 12:00 pm. Thank you.

Please send us your list in a Microsoft Excel Spreadsheet. The only information needed on the spreadsheet is:

**Column A First Name**

**Column B Last Name**

**NO OTHER INFORMATION IN THE SPREADSHEET PLEASE!**

In the e-mail, with the Spreadsheet attachment, please put the name of the function, room number, date, time, and any other pertinent information needed. Please e-mail the information to the following:

[Jamie\\_sims@saa.senate.gov](mailto:Jamie_sims@saa.senate.gov)

[Randall\\_Hopkins@saa.senate.gov](mailto:Randall_Hopkins@saa.senate.gov)

[Sunsara\\_Washington@saa.senate.gov](mailto:Sunsara_Washington@saa.senate.gov)

Also, make your **Official Business Visitors** Aware of the following:

- Access to the room will not be allowed until the time of the reservation.
- Please inform the officer outside they are here for **Official Business** to avoid the tourist lines.
- Please refer them to website: **visitthecapitol.gov** to view the list of prohibited items.

Thank you and please call me at 202 224 7506 if you have any questions.

Jamie Sims

Senate Appointment Desk

tour 8/10

I have spoken with Tom this morning. Now that we know that this schedule will work I will be drafting up an agenda based on conversations I've had with Bill and Tom. We still need to contact Encana and Questar to firm things up. I did notice that Rep. Salazar's office is no longer on the list...

Rey, this is the latest and greatest of the information I have.

8/10

23 July 2007

Dear Merry,

Thanks for meeting Gary Baughman and me in Pinedale. We think the

itinerary

you suggested will allow us to tour both Jonah and the Anticline on Friday August 10.

As we discussed, we'll spend Thursday night in Rock Springs and will plan to leave early enough to meet you and Bill Lanning at the Luman Road Cutoff at about 9:00 AM on Friday. We'll tour the Jonah Field, ending at about 11:00

at the well-known boat launching ramp, where we will stop to discuss what we have seen and to have a picnic lunch. We need to be on our way to Grand Teton National Park around 2:00, so we would have perhaps 2-1/2 hours to tour Questar's operations in the Pinedale Anticline.

I asked Diana Hoff at Questar if she could coordinate with this schedule, possibly meeting us at the Luman Road Cutoff, or the boat ramp, or in Pinedale, or at a Questar field site. I hope this works, because we would really like to see as many operations as possible.

Attached is a draft list of participants and a summary schedule for the trip. We expect to pick up a few more people and maybe lose one or two before we hit the road on August 6. It's an interesting group, with most of the political forces in the energy development debate represented in one form or another.

I'll be in touch again after Diana responds. Thank you very much for your most valuable assistance.

Tom Sladek

## A Step Toward Clean Energy

Last month the [Senate](#) began to move our nation toward energy independence by putting us on a path to the clean production of fuels and power.

By a 65-27 vote, we passed a bill that will significantly ramp up the use of the homegrown biofuels that will replace gasoline, and require that the vehicles we drive get 10 more miles out of every gallon of fuel.

The [Clean Energy Act of 2007](#), which was shaped by the [Senate Energy and Natural Resources Committee](#) that I chair, also takes another major step toward reducing our dependence on fossil fuels by requiring a reduction in overall U.S. oil consumption of 2.5 million barrels per day by 2016, escalating to a savings of 10 million barrels per day by 2031.

As we dial back our use of fossil fuels, the bill requires that we turn increasingly toward renewable fuel supplies, such as wind and solar power. And it does so in a way that protects the environment because it requires that the actual production of renewable energies be 20 percent cleaner than the energy we're using today.

It also will allow us to continue to use coal - a domestic source of energy which the United States has in abundance - by finding ways to capture and store the dangerous carbon dioxide it emits. Carbon is one of the most common greenhouse gases that is contributing to global warming.

I believe the federal government should lead by example, and this bill would guarantee just that. If enacted, this bill would require the federal government to reduce by 20 percent the amount of petroleum its fleet of vehicles consumes and to purchase at least 15 percent of its electricity from renewable resources. And it would make dramatic improvements in the efficiency of federal buildings.

This is a good bill that puts us on a path to energy

independence. But the truth is, it would have been stronger had the minority party not blocked consideration of two key proposals. The first was a \$30 billion package of incentives for the production of renewable energy. The second was a plan that would have required that utility companies produce 15 percent of their energy through renewable resources.

Because these two provisions are essential to a comprehensive energy package, I will continue to press for their passage as we move into negotiations with the House of Representatives.

My goal is to produce a bill to send to the president that taps into America's limitless capacity for innovation, and does so in a way that makes us more energy independent. We can -- and should -- lead the world in developing new technologies that will produce clean, alternative energy and help address the threat of global warming.

### Global Warming

I have also introduced bipartisan legislation designed to stop the advance of global warming while protecting the U.S. economy and American consumers. The [Low Carbon Economy Act](#) is an economy-wide mandatory cap-and-trade program that would set an annual target on the amount of carbon that could be put into the atmosphere, and also allow firms to buy, sell, and trade carbon credits. The target is designed to cut emissions by at least sixty percent by 2050.

Funds raised through the sale of carbon credits would be invested in new low-emission energy technologies that would be employed by industry to further reduce the level of greenhouse gases. In short, the bill would promote a decisive transition to new, lower-carbon technologies, and do so at a cost that the economy would be prepared to absorb.

This bipartisan approach strikes the right balance and would return the U.S. to a position of global leadership.

\*This comments box gives you a quick and easy way to share your feedback on this story. Your message will be reviewed but will not receive a response.

The second group of summer interns in my Washington and New Mexico offices began their internship last month, and they are working hard on behalf of New Mexico. Through the internship, these students are learning about the [U.S. Senate](#) and how the work that is done here affects our state and the country.

Interns are generally undergraduate students from New Mexico. The interns in my Washington office have been working closely with members of my legislative staff to research policy issues, attend hearings, and lead tours of the [U.S. Capitol building](#) to visitors from New Mexico. The interns in my state offices have been assisting my field and constituent services staff on office projects and helping with front office duties. New Mexico has much to be proud of in these excellent students.

An internship in one of my offices is a valuable learning opportunity for students interested in government or in exploring how public policy affects their field of interest. If you would like to participate in a future internship, please visit the [internship section](#) of [my website](#) for further information. The application deadline for the fall internship program is August 17.

### **Capitol Tours**

If you plan to visit Washington, DC this spring or summer, let my staff arrange [tours of the U.S. Capitol](#) for you and your group. Please call my Washington office at (202) 224-5521 to make arrangements. My office can also help arrange tours of the White House, but please note that such tours are in extremely high demand and usually require considerable lead time to arrange. For those tickets, please contact my office at least four to six months in advance of your trip and, if possible, be flexible in the dates you can visit. White House tickets are allocated by the White House on a first-come, first-served basis.

### **Constituent Services**

My state offices offer assistance to New Mexicans who are having difficulty working with federal agencies. My staff can help with veterans and military services, social security concerns, immigration, housing, and many other issues. Please use the clickable map of the state in the sidebar to find the office closest to you.

[More about Constituent Services](#)

**Statement of  
Neil Kornze  
Director  
Bureau of Land Management, U.S. Department of the Interior  
Senate Energy and Natural Resources Committee  
Subcommittee on Public Lands, Forests, and Mining**

***“Bureau of Land Management’s Final Hydraulic Fracturing Rule”***

**April 30, 2015**

Chairman Barrasso, Ranking Member Wyden, and Members of the Subcommittee, thank you for the opportunity to discuss the Bureau of Land Management’s (BLM) final hydraulic fracturing regulations and their application to Federal, tribal, and Indian trust mineral resources. The BLM oil and gas program’s highest priority is ensuring that the operations it authorizes on public and tribal lands are safe and environmentally responsible. This rule is critical to meeting that responsibility as we continue to offer millions of acres of public land for minerals development each year.

The BLM’s rule establishes a consistent set of requirements designed to prevent problems in these complex hydraulic fracturing operations before they occur. It also will provide as much information as possible to the public about these operations that affect their public lands. The goals of the rule – safe and environmentally responsible operation and resource protection – are goals that we know the BLM shares with industry, states, tribes, and the American public. The expertise brought to these issues by those who participated in the rulemaking process was essential to producing a rule that will achieve these goals, and we are very appreciative of the time and skill invested by all concerned.

**Background**

The BLM is responsible for protecting the resources and managing the uses of our nation’s public lands, which are located primarily in 12 western states, including Alaska. The BLM administers more land – over 245 million surface acres – than any other Federal agency. The BLM also manages approximately 700 million acres of onshore Federal mineral estate throughout the nation, including the subsurface estate overlain by properties managed by other Federal agencies such as the Department of Defense and the U.S. Forest Service. In addition, the BLM, together with the Bureau of Indian Affairs (BIA), provides permitting and oversight services under the Indian Mineral Leasing Act of 1938 to approximately 56 million acres of land held in trust by the Federal government on behalf of tribes and individual Indian owners. The BLM works closely with surface management agencies, including the BIA and tribal governments, in the management of these subsurface resources. We are also mindful of our agency’s responsibility for stewardship of public land resources and Indian trust assets that generate substantial revenue for the U.S. Treasury, the states, tribal governments, and individual Indian owners.

In support of President Obama’s all-of-the-above energy strategy, the BLM is committed to promoting safe, responsible, and environmentally sustainable domestic oil and gas production in

a manner that will protect consumers, human health, and the environment, and reduce our dependence on foreign oil. Secretary Jewell has made it clear that as we expand and diversify our energy portfolio, the development of conventional energy resources from BLM-managed lands will continue to play a critical role in meeting the nation's energy needs and fueling our economy.

In Fiscal Year (FY) 2014, onshore Federal oil and gas royalties exceeded \$3 billion, approximately half of which were paid directly to the states in which the development occurred. In FY 2014, tribal oil and gas royalties exceeded \$1 billion with all of those revenues paid to the tribes or individual Indian owners of the land on which the development occurred.

The BLM works diligently to fulfill its role in securing America's energy future, coordinating closely with partners across the country to ensure that development of oil and gas resources occurs in the right places and that those projects are managed safely and responsibly. In recent years, the BLM has overseen a significant increase in oil production from public lands, while also supporting continued natural gas production. Oil production from Federal and Indian lands in 2014 rose twelve percent from the previous year and is now up 81 percent since 2008 – 113 million barrels per year in 2008 to 205 million barrels per year today. For comparison, nationwide oil production over the same period increased 73 percent. The BLM is proud to be a leader in this area, and continues to make public lands available for oil and gas development in excess of industry demand. Additionally, today the BLM has responsibility for more than 100,000 existing oil and gas wells.

### **Hydraulic Fracturing Technology**

Hydraulic fracturing involves the injection of fluid under high pressure to create or enlarge fractures in the rocks containing oil and gas so that the fluids can flow more freely into the wellbore and thus increase production. The number of wells on BLM-managed public lands and on Indian lands that are stimulated by hydraulic fracturing techniques has increased steadily in recent years. Of wells currently being drilled, over 90 percent use modern hydraulic fracturing techniques for well completion.

These new well completions are typically significantly more complex than the wells drilled in the past. Modern hydraulic fracturing operations are often considerably deeper and coupled with relatively new horizontal drilling techniques, unlike those that occurred in the past which were used on a relatively small scale to complete or to re-complete wells. The increasingly common combination of long lateral well bores with hydraulic fracturing today has facilitated larger-scale operations that allow greater access to shale oil and gas resources across the country, sometimes in areas that have not previously or only recently experienced significant oil and gas development.

### **Hydraulic Fracturing Rulemaking Considerations**

The Mineral Leasing Act of 1920 (MLA), as amended, directs the Secretary of the Interior to lease Federal oil and gas resources, and authorizes her to regulate the resulting oil and gas operations on those leases. The BLM has used this authority to develop regulations governing all aspects of oil and gas operations, including requirements related to surface-disturbing activities, production measurement, and well construction. The Indian Mineral Leasing Act

extends this regulatory authority and the resultant rules to Indian oil and gas leases on trust lands (except those lands specifically excluded by statute). Finally, the Federal Land Policy and Management Act of 1976 (FLPMA) directs the BLM to manage the public lands using the principles of multiple use and sustained yield and to take any action necessary to prevent unnecessary or undue degradation. In fulfilling these objectives, FLPMA requires the BLM to manage public lands in a manner that protects the quality of their resources, including ecological, environmental, and water resources. On net, this statutory regime requires the BLM to balance responsible development with protection of the environment and public safety. The BLM works hard to ensure the appropriate balance is struck and that the applicable regulations and requirements are applied and enforced fairly and consistently across all the lands where the BLM has oversight responsibilities.

Prior to the issuance of the hydraulic fracturing rule, the BLM's rules on oil and gas operations were last updated over 30 years ago, and had not kept pace with the significant technological advances in hydraulic fracturing techniques and the tremendous increase in its use. The new rule is the culmination of four years of work by the BLM that began in November 2010 when it held its first public forum on this topic. Since that time, the BLM has published two proposed rules and held numerous meetings with the public and state officials, as well as many tribal consultations and meetings. The public comment period was open for a cumulative period of more than 210 days, during which time the BLM received and analyzed comments from more than 1.5 million individuals and groups. During this period, the BLM also studied state and tribal regulations, and consulted with state and tribal agencies, industry, and the public, including communities affected by oil and gas operations.

### **Hydraulic Fracturing Rule Requirements**

Informed by the experience of its experts and the technical expertise and concerns of state regulators, tribes, industry, and the public, the BLM's hydraulic fracturing rule strengthens its existing oversight procedures and provides all stakeholders with additional assurance that operations are being carried out safely and responsibly.

Key components of the rule include provisions for ensuring the protection of groundwater supplies through requirements related to wellbore integrity. These include the placement of strong cement barriers between the wellbore and any potentially usable water zones through which the wellbore passes, which protects groundwater both from hydraulic fracturing fluids during drilling and from hydrocarbon contamination during production. The rule requires the interim storage of recovered waste fluids from the hydraulic fracturing operation in tanks in order to minimize the potential for produced water spills that put air, water, and wildlife at risk. Additional measures requiring companies to submit more detailed information on the geology, depth, and location of preexisting wells prior to drilling will lower the risk of cross-well contamination, which has become more prevalent as the prevalence of horizontal drilling has increased. To increase transparency, as much of this information as possible will be made available to the public. Finally, the rule requires companies to publicly disclose information about the chemicals used in their hydraulic fracturing processes on public lands within 30 days of completing the operations.

These requirements were developed based on BLM's experience and technical expertise and work done by states, tribal authorities, and industry. During the four years the BLM spent preparing the rule, it benefited from the expertise of state and tribal regulators, and many provisions of the final rule reflect existing state standards. None of these requirements impose undue delays, costs, or procedures on operators.

### **Work with States & Tribes**

The BLM has established and maintained regulations governing oil and gas operations on public lands for decades, and has worked successfully with operators, tribes and state governments to avoid duplication and delay in the enforcement and monitoring of these regulations. The implementation of the recently issued hydraulic fracturing rule will continue this longstanding practice while also ensuring the BLM satisfies its obligations to ensure federal standards are met. As explained above, the rule builds upon and updates the BLM's existing regulations to address an evolving technology, in order to provide consistent parameters for the conduct of hydraulic fracturing operations on BLM-managed public lands nationwide and Indian trust lands.

Of the 32 states with the potential for oil and gas development on federally managed mineral resources, slightly more than half have rules in place that address hydraulic fracturing, and those rules vary widely from state to state. Recognizing the expertise and experience that state and tribal authorities possess and consistent with its standard practice of ensuring the efficient implementation of its rules, the BLM will work with states and tribes that have standards in place for hydraulic fracturing that meet or exceed those set by the BLM's rule to establish variances from those aspects of the BLM rule. Following BLM approval of a variance, the BLM and the state or tribe will enforce the more protective requirement. In addition, the BLM will continue its coordination with states and tribes to establish or review and strengthen existing agreements related to oil and gas regulation and operations.

The BLM's overall intent for these coordination efforts is to minimize duplication and maximize efficiency, while also ensuring the applicable federal standards are met. As this rule is implemented, the BLM will continuously work with states, tribes, and operators to maximize coordination and efficiency.

### **Implementing the Rule**

The final hydraulic fracturing rule will be effective on June 24, 2015. Implementation of the rule is expected to cost industry about \$11,400 per hydraulic fracturing operation. On average, this expense equates to no more than one-quarter of one percent of the cost of drilling a well. This is a modest cost, especially in light of public interest in ensuring that these operations are conducted in an environmentally sound and safe manner. The BLM is aware that industry, states, tribes, and the public share the same goal of safeguarding local communities, water quality, wildlife, and other resources from potential harm. For this reason, the BLM rule not only incorporates requirements from existing state and tribal rules, but industry best practices as well. In many cases operators have voluntarily undertaken the best practices reflected in the BLM's rule. The rule ensures that those practices are maintained and adopted by all. As result, the rule achieves a cost-effective path towards consistent permitting requirements and disclosure protocols for hydraulic fracturing operations.

The BLM has taken a number of steps both internally and externally to prepare for the implementation of the rule in advance of its effective date. Internally, recognizing the central role wellbore integrity plays in maintaining safe operations, the BLM partnered with the Society of Petroleum Engineers to add more technical training for the BLM's engineers that emphasizes cementing and other critical aspects of hydraulic fracturing operations. As the BLM implements the rule, it will continue to offer, develop and refine these technical training modules. Guidance will also be issued to State and Field Offices through formal Instruction Memorandum to ensure the rule is implemented in the most efficient and consistent way possible.

Externally, the BLM has undertaken outreach efforts to states, operators, trade associations, and other interested stakeholders. The BLM State Offices are in the process of meeting with their state counterparts, undertaking state-by-state comparisons of regulatory requirements in order to identify opportunities for variances, and to establish Memorandums of Understanding (MOUs) that will realize efficiencies and allow for successful implementation of the rule. To date, the BLM has scheduled or is scheduling meetings with: the North Dakota Industrial Commission; the Wyoming Oil and Gas Commission; and the states of Alaska, California, Colorado, New Mexico, Nevada, and Utah. The BLM will be presenting the rule at the Interstate Oil and Gas Compact Commission's next meeting.

Similarly, communication with industry is also ongoing. Our offices are reaching out to local or regional industry organizations and local operators to address their questions related to the implementation process. On April 7, 2015, BLM Washington hosted a general industry outreach session that over 200 people participated in to explain the rule and answer questions about its implementation. Similar sessions have been set up or will be set up at the local level. The BLM's Carlsbad NM Field Office provided a presentation to the local working group for the SE NM New Mexico Oil and Gas Association on April 9, 2015. BLM State and Field Offices are working to coordinate similar opportunities with associations representing producers in Wyoming, Utah, Colorado, Montana, and North Dakota. Finally, we are also working closely with the Ground Water Protection Council (GWPC) to finalize a MOU that will ensure that the chemical disclosures provided by industry can be easily searched and downloaded from the GWPC's publicly available hydraulic fracturing database, FracFocus.

### **Conclusion**

The BLM's hydraulic fracturing rule provides a much needed update to the BLM's existing regulations. It establishes commonsense standards governing modern hydraulic fracturing operations that reflect the technological advancement of the process over time. These new regulations are essential to our efforts to protect the environment and local communities, while also ensuring the continued conscientious development of our federal oil and gas resources. Thank you for the opportunity to present this testimony. I will be pleased to answer any questions you may have.

Subcommittee on Public Lands, Forests, and Mining**

***“Bureau of Land Management’s Final Hydraulic Fracturing Rule”***

**April 30, 2015**

Chairman Barrasso, Ranking Member Wyden, and Members of the Subcommittee, thank you for the opportunity to discuss the Bureau of Land Management’s (BLM) final hydraulic fracturing regulations and their application to Federal, tribal, and Indian trust mineral resources. The BLM oil and gas program’s highest priority is ensuring that the operations it authorizes on public and tribal lands are safe and environmentally responsible. This rule is critical to meeting that responsibility as we continue to offer millions of acres of public land for minerals development each year.

The BLM’s rule establishes a consistent set of requirements designed to prevent problems in these complex hydraulic fracturing operations before they occur. It also will provide as much information as possible to the public about these operations that affect their public lands. The goals of the rule – safe and environmentally responsible operation and resource protection – are goals that we know the BLM shares with industry, states, tribes, and the American public. The expertise brought to these issues by those who participated in the rulemaking process was essential to producing a rule that will achieve these goals, and we are very appreciative of the time and skill invested by all concerned.

**Background**

The BLM is responsible for protecting the resources and managing the uses of our nation’s public lands, which are located primarily in 12 western states, including Alaska. The BLM administers more land – over 245 million surface acres – than any other Federal agency. The BLM also manages approximately 700 million acres of onshore Federal mineral estate throughout the nation, including the subsurface estate overlain by properties managed by other Federal agencies such as the Department of Defense and the U.S. Forest Service. In addition, the BLM, together with the Bureau of Indian Affairs (BIA), provides permitting and oversight services under the Indian Mineral Leasing Act of 1938 to approximately 56 million acres of land held in trust by the Federal government on behalf of tribes and individual Indian owners. The BLM works closely with surface management agencies, including the BIA and tribal governments, in the management of these subsurface resources. We are also mindful of our agency’s responsibility for stewardship of public land resources and Indian trust assets that generate substantial revenue for the U.S. Treasury, the states, tribal governments, and individual Indian owners.

In support of President Obama’s all-of-the-above energy strategy, the BLM is committed to promoting safe, responsible, and environmentally sustainable domestic oil and gas production in

a manner that will protect consumers, human health, and the environment, and reduce our dependence on foreign oil. Secretary Jewell has made it clear that as we expand and diversify our energy portfolio, the development of conventional energy resources from BLM-managed lands will continue to play a critical role in meeting the nation's energy needs and fueling our economy.

In Fiscal Year (FY) 2014, onshore Federal oil and gas royalties exceeded \$3 billion, approximately half of which were paid directly to the states in which the development occurred. In FY 2014, tribal oil and gas royalties exceeded \$1 billion with all of those revenues paid to the tribes or individual Indian owners of the land on which the development occurred.

The BLM works diligently to fulfill its role in securing America's energy future, coordinating closely with partners across the country to ensure that development of oil and gas resources occurs in the right places and that those projects are managed safely and responsibly. In recent years, the BLM has overseen a significant increase in oil production from public lands, while also supporting continued natural gas production. Oil production from Federal and Indian lands in 2014 rose twelve percent from the previous year and is now up 81 percent since 2008 – 113 million barrels per year in 2008 to 205 million barrels per year today. For comparison, nationwide oil production over the same period increased 73 percent. The BLM is proud to be a leader in this area, and continues to make public lands available for oil and gas development in excess of industry demand. Additionally, today the BLM has responsibility for more than 100,000 existing oil and gas wells.

### **Hydraulic Fracturing Technology**

Hydraulic fracturing involves the injection of fluid under high pressure to create or enlarge fractures in the rocks containing oil and gas so that the fluids can flow more freely into the wellbore and thus increase production. The number of wells on BLM-managed public lands and on Indian lands that are stimulated by hydraulic fracturing techniques has increased steadily in recent years. Of wells currently being drilled, over 90 percent use modern hydraulic fracturing techniques for well completion.

These new well completions are typically significantly more complex than the wells drilled in the past. Modern hydraulic fracturing operations are often considerably deeper and coupled with relatively new horizontal drilling techniques, unlike those that occurred in the past which were used on a relatively small scale to complete or to re-complete wells. The increasingly common combination of long lateral well bores with hydraulic fracturing today has facilitated larger-scale operations that allow greater access to shale oil and gas resources across the country, sometimes in areas that have not previously or only recently experienced significant oil and gas development.

### **Hydraulic Fracturing Rulemaking Considerations**

The Mineral Leasing Act of 1920 (MLA), as amended, directs the Secretary of the Interior to lease Federal oil and gas resources, and authorizes her to regulate the resulting oil and gas operations on those leases. The BLM has used this authority to develop regulations governing all aspects of oil and gas operations, including requirements related to surface-disturbing activities, production measurement, and well construction. The Indian Mineral Leasing Act

extends this regulatory authority and the resultant rules to Indian oil and gas leases on trust lands (except those lands specifically excluded by statute). Finally, the Federal Land Policy and Management Act of 1976 (FLPMA) directs the BLM to manage the public lands using the principles of multiple use and sustained yield and to take any action necessary to prevent unnecessary or undue degradation. In fulfilling these objectives, FLPMA requires the BLM to manage public lands in a manner that protects the quality of their resources, including ecological, environmental, and water resources. On net, this statutory regime requires the BLM to balance responsible development with protection of the environment and public safety. The BLM works hard to ensure the appropriate balance is struck and that the applicable regulations and requirements are applied and enforced fairly and consistently across all the lands where the BLM has oversight responsibilities.

Prior to the issuance of the hydraulic fracturing rule, the BLM's rules on oil and gas operations were last updated over 30 years ago, and had not kept pace with the significant technological advances in hydraulic fracturing techniques and the tremendous increase in its use. The new rule is the culmination of four years of work by the BLM that began in November 2010 when it held its first public forum on this topic. Since that time, the BLM has published two proposed rules and held numerous meetings with the public and state officials, as well as many tribal consultations and meetings. The public comment period was open for a cumulative period of more than 210 days, during which time the BLM received and analyzed comments from more than 1.5 million individuals and groups. During this period, the BLM also studied state and tribal regulations, and consulted with state and tribal agencies, industry, and the public, including communities affected by oil and gas operations.

### **Hydraulic Fracturing Rule Requirements**

Informed by the experience of its experts and the technical expertise and concerns of state regulators, tribes, industry, and the public, the BLM's hydraulic fracturing rule strengthens its existing oversight procedures and provides all stakeholders with additional assurance that operations are being carried out safely and responsibly.

Key components of the rule include provisions for ensuring the protection of groundwater supplies through requirements related to wellbore integrity. These include the placement of strong cement barriers between the wellbore and any potentially usable water zones through which the wellbore passes, which protects groundwater both from hydraulic fracturing fluids during drilling and from hydrocarbon contamination during production. The rule requires the interim storage of recovered waste fluids from the hydraulic fracturing operation in tanks in order to minimize the potential for produced water spills that put air, water, and wildlife at risk. Additional measures requiring companies to submit more detailed information on the geology, depth, and location of preexisting wells prior to drilling will lower the risk of cross-well contamination, which has become more prevalent as the prevalence of horizontal drilling has increased. To increase transparency, as much of this information as possible will be made available to the public. Finally, the rule requires companies to publicly disclose information about the chemicals used in their hydraulic fracturing processes on public lands within 30 days of completing the operations.

These requirements were developed based on BLM's experience and technical expertise and work done by states, tribal authorities, and industry. During the four years the BLM spent preparing the rule, it benefited from the expertise of state and tribal regulators, and many provisions of the final rule reflect existing state standards. None of these requirements impose undue delays, costs, or procedures on operators.

### **Work with States & Tribes**

The BLM has established and maintained regulations governing oil and gas operations on public lands for decades, and has worked successfully with operators, tribes and state governments to avoid duplication and delay in the enforcement and monitoring of these regulations. The implementation of the recently issued hydraulic fracturing rule will continue this longstanding practice while also ensuring the BLM satisfies its obligations to ensure federal standards are met. As explained above, the rule builds upon and updates the BLM's existing regulations to address an evolving technology, in order to provide consistent parameters for the conduct of hydraulic fracturing operations on BLM-managed public lands nationwide and Indian trust lands.

Of the 32 states with the potential for oil and gas development on federally managed mineral resources, slightly more than half have rules in place that address hydraulic fracturing, and those rules vary widely from state to state. Recognizing the expertise and experience that state and tribal authorities possess and consistent with its standard practice of ensuring the efficient implementation of its rules, the BLM will work with states and tribes that have standards in place for hydraulic fracturing that meet or exceed those set by the BLM's rule to establish variances from those aspects of the BLM rule. Following BLM approval of a variance, the BLM and the state or tribe will enforce the more protective requirement. In addition, the BLM will continue its coordination with states and tribes to establish or review and strengthen existing agreements related to oil and gas regulation and operations.

The BLM's overall intent for these coordination efforts is to minimize duplication and maximize efficiency, while also ensuring the applicable federal standards are met. As this rule is implemented, the BLM will continuously work with states, tribes, and operators to maximize coordination and efficiency.

### **Implementing the Rule**

The final hydraulic fracturing rule will be effective on June 24, 2015. Implementation of the rule is expected to cost industry about \$11,400 per hydraulic fracturing operation. On average, this expense equates to no more than one-quarter of one percent of the cost of drilling a well. This is a modest cost, especially in light of public interest in ensuring that these operations are conducted in an environmentally sound and safe manner. The BLM is aware that industry, states, tribes, and the public share the same goal of safeguarding local communities, water quality, wildlife, and other resources from potential harm. For this reason, the BLM rule not only incorporates requirements from existing state and tribal rules, but industry best practices as well. In many cases operators have voluntarily undertaken the best practices reflected in the BLM's rule. The rule ensures that those practices are maintained and adopted by all. As result, the rule achieves a cost-effective path towards consistent permitting requirements and disclosure protocols for hydraulic fracturing operations.

The BLM has taken a number of steps both internally and externally to prepare for the implementation of the rule in advance of its effective date. Internally, recognizing the central role wellbore integrity plays in maintaining safe operations, the BLM partnered with the Society of Petroleum Engineers to add more technical training for the BLM's engineers that emphasizes cementing and other critical aspects of hydraulic fracturing operations. As the BLM implements the rule, it will continue to offer, develop and refine these technical training modules. Guidance will also be issued to State and Field Offices through formal Instruction Memorandum to ensure the rule is implemented in the most efficient and consistent way possible.

Externally, the BLM has undertaken outreach efforts to states, operators, trade associations, and other interested stakeholders. The BLM State Offices are in the process of meeting with their state counterparts, undertaking state-by-state comparisons of regulatory requirements in order to identify opportunities for variances, and to establish Memorandums of Understanding (MOUs) that will realize efficiencies and allow for successful implementation of the rule. To date, the BLM has scheduled or is scheduling meetings with: the North Dakota Industrial Commission; the Wyoming Oil and Gas Commission; and the states of Alaska, California, Colorado, New Mexico, Nevada, and Utah. The BLM will be presenting the rule at the Interstate Oil and Gas Compact Commission's next meeting.

Similarly, communication with industry is also ongoing. Our offices are reaching out to local or regional industry organizations and local operators to address their questions related to the implementation process. On April 7, 2015, BLM Washington hosted a general industry outreach session that over 200 people participated in to explain the rule and answer questions about its implementation. Similar sessions have been set up or will be set up at the local level. The BLM's Carlsbad NM Field Office provided a presentation to the local working group for the SE NM New Mexico Oil and Gas Association on April 9, 2015. BLM State and Field Offices are working to coordinate similar opportunities with associations representing producers in Wyoming, Utah, Colorado, Montana, and North Dakota. Finally, we are also working closely with the Ground Water Protection Council (GWPC) to finalize a MOU that will ensure that the chemical disclosures provided by industry can be easily searched and downloaded from the GWPC's publicly available hydraulic fracturing database, FracFocus.

### **Conclusion**

The BLM's hydraulic fracturing rule provides a much needed update to the BLM's existing regulations. It establishes commonsense standards governing modern hydraulic fracturing operations that reflect the technological advancement of the process over time. These new regulations are essential to our efforts to protect the environment and local communities, while also ensuring the continued conscientious development of our federal oil and gas resources. Thank you for the opportunity to present this testimony. I will be pleased to answer any questions you may have.

[John Barrasso - United States Senator, Wyoming](#)

Dear Friend,

The EPA and the U.S. Army Corps of Engineers (USACE) are once again overreaching and trying to expand the Clean Water Act in an extreme way. Instead of working to preserve beautiful rivers, like our Snake River and Wind River, these agencies are seeking to regulate agriculture water, irrigation ditches, isolated ponds and other non-navigable waters as "Waters of the U.S." I've heard from so many people across our state who are concerned that the EPA's proposal would hurt Wyoming residents, their land and their businesses.

This week, along with a bipartisan group of senators, I introduced the Federal Water Quality Protection Act. This bill will protect America's waterways - and America's farmers, ranchers and landowners. If you are interested in learning more information about our bill, please click [here](#).

By striking the right balance, we'll keep our waterways safe and pristine and allow them to be used as natural resources.

Best Wishes,

Senator John Barrasso, M.D.

## WY Oil and Gas Supervisor Testifies Before Senate on BLM Fracking Rule

April 30, 2015

WASHINGTON, DC – Today, U.S. Senator John Barrasso (R-Wyo.) welcomed Wyoming Oil and Gas Supervisor Mark Watson before the Senate Energy and Natural Resources Subcommittee on Public Lands, Forests, and Mining. Senator Barrasso, who chairs the subcommittee, invited Supervisor Mark Watson to testify about the Bureau of Land Management’s (BLM) final hydraulic fracturing rule.

“In Wyoming, about 47 percent of the surface estate and 67 percent of the mineral estate is owned by the federal government. This means that decisions made in Washington have an extraordinary impact on the people of Wyoming,” said Barrasso. “It’s hard to find someone who understands this reality more than Wyoming’s Oil and Gas Supervisor Mark Watson. I want to thank him for sharing his firsthand experiences with our committee today.”

## Barrasso Highlights Bipartisan Bill to Protect America’s Waterways

*“This bill says Yes to clean water – and No to extreme bureaucracy. It will give the Environmental Protection Agency the direction it needs – the direction to write a strong and reasonable rule, that truly protects America’s waterways. One that keeps Washington’s hands off of the things like irrigation ditches, isolated ponds, and groundwater.”*

April 30, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-Wyo.) delivered the following remarks on the Senate floor about the bipartisan Federal Water Quality Protection Act (S. 1140) that he introduced today. The bill would direct the Environmental Protection Agency and Army Corps of Engineers to issue a revised “waters of the United States” (WOTUS) rule that protects traditional navigable water from water pollution, while also protecting farmers, ranchers and private landowners.

## Senators Introduce Bipartisan Bill to Protect Navigable Waters in the United States

*Bipartisan bill will direct EPA and Army Corps of Engineers to issue a revised WOTUS rule that protects traditional navigable water from water pollution, while*

*also protecting farmers, ranchers and private landowners.*

April 30, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Donnelly (D-IN), Jim Inhofe (R-OK), Heidi Heitkamp (D-ND), Pat Roberts (R-KS) and Joe Manchin (D-WV), led a bipartisan group of senators in introducing the Federal Water Quality Protection Act (S. 1140).

The bipartisan legislation will ensure the protection of traditional navigable waters of the United States. It also protects farmers, ranchers and private landowners by directing the Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers to issue a revised “Waters of the United States” (WOTUS) rule that does not include things such as isolated ponds, ditches, agriculture water, storm water, groundwater, floodwater, municipal water supply systems, wastewater management systems, and streams without enough flow to carry pollutants to navigable waters.

## Senate Advances Bill to Ensure Open EPA Science

### *Senate EPW Committee passed Secret Science Reform Act*

April 28, 2015

WASHINGTON D.C. – Today, U.S. Senators John Barrasso (R-WY) and David Vitter (R-LA) praised the Senate Environment and Public Works (EPW) Committee for passing the Secret Science Reform Act (S. 544). Barrasso, Vitter and EPW Committee Chairman Jim Inhofe (R-OK) introduced the bill in February to ensure future Environmental Protection Agency (EPA) regulations are based on the best available science. Similar legislation passed the House in the 113th Congress with bipartisan support.

“As a doctor, I know that the best data and research are thoroughly tested, reproducible and publicly available,” said Barrasso. “Today the Committee voted to require the EPA to give Americans direct access to the science used to justify regulations that impact everything from jobs to our environment. Our bill will give Americans more confidence that the EPA’s policies will deliver the environmental and public health benefits that the agency has promised.”

## Barrasso Calls for Oversight of Uranium Trader Following Former DOE Official Poneman Appointment

### *Senator sends letter to Secretary Moniz in response to Department of Energy testimony before the House Oversight and Government Reform Committee.*

April 23, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-WY) sent a letter to Energy Secretary Moniz in response to the Department of Energy’s (DOE) testimony at yesterday’s hearing before the House Oversight and Government Reform Committee.

At the hearing, a DOE official indicated that DOE does not review uranium contracts involving the Traxys Group, a uranium commodities trader, which recently appointed former Deputy Secretary of Energy Daniel Poneman to its Board of Directors.

Since 2011, DOE has transferred roughly \$900 million of publicly-owned uranium which has financially benefitted Traxys.

## Senators Reintroduce Bipartisan Alternative Fuels Bill

*Bill would allow the U.S. military and federal agencies to purchase transportation fuel produced from coal, oil shale and oil sands.*

April 21, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Manchin (D-WV), Heidi Heitkamp (D-ND) and others reintroduced the bipartisan North American Alternative Fuels Act. The bill would repeal section 526 of the Energy Independence and Security Act (EISA) of 2007 which prohibits the federal government, including the U.S. military, from purchasing fuel produced from coal, oil shale and oil sands.

“Our nation’s military should have access to any and all fuel sources it needs to achieve its mission,” said Senator Barrasso. “Instead of giving preference to oil imported from overseas, Washington should look to North American coal, oil shale and oil sands, all of which provide an affordable, abundant and alternative source of fuel. In addition to increasing cost effectiveness options for the government, it will also increase America’s energy security.”

[John Barrasso - United States Senator, Wyoming](#)

Dear Friend,

The EPA and the U.S. Army Corps of Engineers (USACE) are once again overreaching and trying to expand the Clean Water Act in an extreme way. Instead of working to preserve beautiful rivers, like our Snake River and Wind River, these agencies are seeking to regulate agriculture water, irrigation ditches, isolated ponds and other non-navigable waters as "Waters of the U.S." I've heard from so many people across our state who are concerned that the EPA's proposal would hurt Wyoming residents, their land and their businesses.

This week, along with a bipartisan group of senators, I introduced the Federal Water Quality Protection Act. This bill will protect America's waterways - and America's farmers, ranchers and landowners. If you are interested in learning more information about our bill, please click [here](#).

By striking the right balance, we'll keep our waterways safe and pristine and allow them to be used as natural resources.

Best Wishes,

Senator John Barrasso, M.D.

## WY Oil and Gas Supervisor Testifies Before Senate on BLM Fracking Rule

April 30, 2015

WASHINGTON, DC – Today, U.S. Senator John Barrasso (R-Wyo.) welcomed Wyoming Oil and Gas Supervisor Mark Watson before the Senate Energy and Natural Resources Subcommittee on Public Lands, Forests, and Mining. Senator Barrasso, who chairs the subcommittee, invited Supervisor Mark Watson to testify about the Bureau of Land Management’s (BLM) final hydraulic fracturing rule.

“In Wyoming, about 47 percent of the surface estate and 67 percent of the mineral estate is owned by the federal government. This means that decisions made in Washington have an extraordinary impact on the people of Wyoming,” said Barrasso. “It’s hard to find someone who understands this reality more than Wyoming’s Oil and Gas Supervisor Mark Watson. I want to thank him for sharing his firsthand experiences with our committee today.”

## Barrasso Highlights Bipartisan Bill to Protect America’s Waterways

*“This bill says Yes to clean water – and No to extreme bureaucracy. It will give the Environmental Protection Agency the direction it needs – the direction to write a strong and reasonable rule, that truly protects America’s waterways. One that keeps Washington’s hands off of the things like irrigation ditches, isolated ponds, and groundwater.”*

April 30, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-Wyo.) delivered the following remarks on the Senate floor about the bipartisan Federal Water Quality Protection Act (S. 1140) that he introduced today. The bill would direct the Environmental Protection Agency and Army Corps of Engineers to issue a revised “waters of the United States” (WOTUS) rule that protects traditional navigable water from water pollution, while also protecting farmers, ranchers and private landowners.

## Senators Introduce Bipartisan Bill to Protect Navigable Waters in the United States

*Bipartisan bill will direct EPA and Army Corps of Engineers to issue a revised WOTUS rule that protects traditional navigable water from water pollution, while*

*also protecting farmers, ranchers and private landowners.*

April 30, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Donnelly (D-IN), Jim Inhofe (R-OK), Heidi Heitkamp (D-ND), Pat Roberts (R-KS) and Joe Manchin (D-WV), led a bipartisan group of senators in introducing the Federal Water Quality Protection Act (S. 1140).

The bipartisan legislation will ensure the protection of traditional navigable waters of the United States. It also protects farmers, ranchers and private landowners by directing the Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers to issue a revised “Waters of the United States” (WOTUS) rule that does not include things such as isolated ponds, ditches, agriculture water, storm water, groundwater, floodwater, municipal water supply systems, wastewater management systems, and streams without enough flow to carry pollutants to navigable waters.

## Senate Advances Bill to Ensure Open EPA Science

### *Senate EPW Committee passed Secret Science Reform Act*

April 28, 2015

WASHINGTON D.C. – Today, U.S. Senators John Barrasso (R-WY) and David Vitter (R-LA) praised the Senate Environment and Public Works (EPW) Committee for passing the Secret Science Reform Act (S. 544). Barrasso, Vitter and EPW Committee Chairman Jim Inhofe (R-OK) introduced the bill in February to ensure future Environmental Protection Agency (EPA) regulations are based on the best available science. Similar legislation passed the House in the 113th Congress with bipartisan support.

“As a doctor, I know that the best data and research are thoroughly tested, reproducible and publicly available,” said Barrasso. “Today the Committee voted to require the EPA to give Americans direct access to the science used to justify regulations that impact everything from jobs to our environment. Our bill will give Americans more confidence that the EPA’s policies will deliver the environmental and public health benefits that the agency has promised.”

## Barrasso Calls for Oversight of Uranium Trader Following Former DOE Official Poneman Appointment

### *Senator sends letter to Secretary Moniz in response to Department of Energy testimony before the House Oversight and Government Reform Committee.*

April 23, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-WY) sent a letter to Energy Secretary Moniz in response to the Department of Energy’s (DOE) testimony at yesterday’s hearing before the House Oversight and Government Reform Committee.

At the hearing, a DOE official indicated that DOE does not review uranium contracts involving the Traxys Group, a uranium commodities trader, which recently appointed former Deputy Secretary of Energy Daniel Poneman to its Board of Directors.

Since 2011, DOE has transferred roughly \$900 million of publicly-owned uranium which has financially benefitted Traxys.

## Senators Reintroduce Bipartisan Alternative Fuels Bill

*Bill would allow the U.S. military and federal agencies to purchase transportation fuel produced from coal, oil shale and oil sands.*

April 21, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Manchin (D-WV), Heidi Heitkamp (D-ND) and others reintroduced the bipartisan North American Alternative Fuels Act. The bill would repeal section 526 of the Energy Independence and Security Act (EISA) of 2007 which prohibits the federal government, including the U.S. military, from purchasing fuel produced from coal, oil shale and oil sands.

“Our nation’s military should have access to any and all fuel sources it needs to achieve its mission,” said Senator Barrasso. “Instead of giving preference to oil imported from overseas, Washington should look to North American coal, oil shale and oil sands, all of which provide an affordable, abundant and alternative source of fuel. In addition to increasing cost effectiveness options for the government, it will also increase America’s energy security.”

[John Barrasso - United States Senator, Wyoming](#)

Dear Friend,

The EPA and the U.S. Army Corps of Engineers (USACE) are once again overreaching and trying to expand the Clean Water Act in an extreme way. Instead of working to preserve beautiful rivers, like our Snake River and Wind River, these agencies are seeking to regulate agriculture water, irrigation ditches, isolated ponds and other non-navigable waters as "Waters of the U.S." I've heard from so many people across our state who are concerned that the EPA's proposal would hurt Wyoming residents, their land and their businesses.

This week, along with a bipartisan group of senators, I introduced the Federal Water Quality Protection Act. This bill will protect America's waterways - and America's farmers, ranchers and landowners. If you are interested in learning more information about our bill, please click [here](#).

By striking the right balance, we'll keep our waterways safe and pristine and allow them to be used as natural resources.

Best Wishes,

Senator John Barrasso, M.D.

## WY Oil and Gas Supervisor Testifies Before Senate on BLM Fracking Rule

April 30, 2015

WASHINGTON, DC – Today, U.S. Senator John Barrasso (R-Wyo.) welcomed Wyoming Oil and Gas Supervisor Mark Watson before the Senate Energy and Natural Resources Subcommittee on Public Lands, Forests, and Mining. Senator Barrasso, who chairs the subcommittee, invited Supervisor Mark Watson to testify about the Bureau of Land Management’s (BLM) final hydraulic fracturing rule.

“In Wyoming, about 47 percent of the surface estate and 67 percent of the mineral estate is owned by the federal government. This means that decisions made in Washington have an extraordinary impact on the people of Wyoming,” said Barrasso. “It’s hard to find someone who understands this reality more than Wyoming’s Oil and Gas Supervisor Mark Watson. I want to thank him for sharing his firsthand experiences with our committee today.”

## Barrasso Highlights Bipartisan Bill to Protect America’s Waterways

*“This bill says Yes to clean water – and No to extreme bureaucracy. It will give the Environmental Protection Agency the direction it needs – the direction to write a strong and reasonable rule, that truly protects America’s waterways. One that keeps Washington’s hands off of the things like irrigation ditches, isolated ponds, and groundwater.”*

April 30, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-Wyo.) delivered the following remarks on the Senate floor about the bipartisan Federal Water Quality Protection Act (S. 1140) that he introduced today. The bill would direct the Environmental Protection Agency and Army Corps of Engineers to issue a revised “waters of the United States” (WOTUS) rule that protects traditional navigable water from water pollution, while also protecting farmers, ranchers and private landowners.

## Senators Introduce Bipartisan Bill to Protect Navigable Waters in the United States

*Bipartisan bill will direct EPA and Army Corps of Engineers to issue a revised WOTUS rule that protects traditional navigable water from water pollution, while*

*also protecting farmers, ranchers and private landowners.*

April 30, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Donnelly (D-IN), Jim Inhofe (R-OK), Heidi Heitkamp (D-ND), Pat Roberts (R-KS) and Joe Manchin (D-WV), led a bipartisan group of senators in introducing the Federal Water Quality Protection Act (S. 1140).

The bipartisan legislation will ensure the protection of traditional navigable waters of the United States. It also protects farmers, ranchers and private landowners by directing the Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers to issue a revised “Waters of the United States” (WOTUS) rule that does not include things such as isolated ponds, ditches, agriculture water, storm water, groundwater, floodwater, municipal water supply systems, wastewater management systems, and streams without enough flow to carry pollutants to navigable waters.

## Senate Advances Bill to Ensure Open EPA Science

### *Senate EPW Committee passed Secret Science Reform Act*

April 28, 2015

WASHINGTON D.C. – Today, U.S. Senators John Barrasso (R-WY) and David Vitter (R-LA) praised the Senate Environment and Public Works (EPW) Committee for passing the Secret Science Reform Act (S. 544). Barrasso, Vitter and EPW Committee Chairman Jim Inhofe (R-OK) introduced the bill in February to ensure future Environmental Protection Agency (EPA) regulations are based on the best available science. Similar legislation passed the House in the 113th Congress with bipartisan support.

“As a doctor, I know that the best data and research are thoroughly tested, reproducible and publicly available,” said Barrasso. “Today the Committee voted to require the EPA to give Americans direct access to the science used to justify regulations that impact everything from jobs to our environment. Our bill will give Americans more confidence that the EPA’s policies will deliver the environmental and public health benefits that the agency has promised.”

## Barrasso Calls for Oversight of Uranium Trader Following Former DOE Official Poneman Appointment

### *Senator sends letter to Secretary Moniz in response to Department of Energy testimony before the House Oversight and Government Reform Committee.*

April 23, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-WY) sent a letter to Energy Secretary Moniz in response to the Department of Energy’s (DOE) testimony at yesterday’s hearing before the House Oversight and Government Reform Committee.

At the hearing, a DOE official indicated that DOE does not review uranium contracts involving the Traxys Group, a uranium commodities trader, which recently appointed former Deputy Secretary of Energy Daniel Poneman to its Board of Directors.

Since 2011, DOE has transferred roughly \$900 million of publicly-owned uranium which has financially benefitted Traxys.

## Senators Reintroduce Bipartisan Alternative Fuels Bill

*Bill would allow the U.S. military and federal agencies to purchase transportation fuel produced from coal, oil shale and oil sands.*

April 21, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Manchin (D-WV), Heidi Heitkamp (D-ND) and others reintroduced the bipartisan North American Alternative Fuels Act. The bill would repeal section 526 of the Energy Independence and Security Act (EISA) of 2007 which prohibits the federal government, including the U.S. military, from purchasing fuel produced from coal, oil shale and oil sands.

“Our nation’s military should have access to any and all fuel sources it needs to achieve its mission,” said Senator Barrasso. “Instead of giving preference to oil imported from overseas, Washington should look to North American coal, oil shale and oil sands, all of which provide an affordable, abundant and alternative source of fuel. In addition to increasing cost effectiveness options for the government, it will also increase America’s energy security.”

## WY Oil and Gas Supervisor Testifies Before Senate on BLM Fracking Rule

April 30, 2015

WASHINGTON, DC – Today, U.S. Senator John Barrasso (R-Wyo.) welcomed Wyoming Oil and Gas Supervisor Mark Watson before the Senate Energy and Natural Resources Subcommittee on Public Lands, Forests, and Mining. Senator Barrasso, who chairs the subcommittee, invited Supervisor Mark Watson to testify about the Bureau of Land Management’s (BLM) final hydraulic fracturing rule.

“In Wyoming, about 47 percent of the surface estate and 67 percent of the mineral estate is owned by the federal government. This means that decisions made in Washington have an extraordinary impact on the people of Wyoming,” said Barrasso. “It’s hard to find someone who understands this reality more than Wyoming’s Oil and Gas Supervisor Mark Watson. I want to thank him for sharing his firsthand experiences with our committee today.”

## Barrasso Highlights Bipartisan Bill to Protect America’s Waterways

*“This bill says Yes to clean water – and No to extreme bureaucracy. It will give the Environmental Protection Agency the direction it needs – the direction to write a strong and reasonable rule, that truly protects America’s waterways. One that keeps Washington’s hands off of the things like irrigation ditches, isolated ponds, and groundwater.”*

April 30, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-Wyo.) delivered the following remarks on the Senate floor about the bipartisan Federal Water Quality Protection Act (S. 1140) that he introduced today. The bill would direct the Environmental Protection Agency and Army Corps of Engineers to issue a revised “waters of the United States” (WOTUS) rule that protects traditional navigable water from water pollution, while also protecting farmers, ranchers and private landowners.

## Senators Introduce Bipartisan Bill to Protect Navigable Waters in the United States

*Bipartisan bill will direct EPA and Army Corps of Engineers to issue a revised WOTUS rule that protects traditional navigable water from water pollution, while*

*also protecting farmers, ranchers and private landowners.*

April 30, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Donnelly (D-IN), Jim Inhofe (R-OK), Heidi Heitkamp (D-ND), Pat Roberts (R-KS) and Joe Manchin (D-WV), led a bipartisan group of senators in introducing the Federal Water Quality Protection Act (S. 1140).

The bipartisan legislation will ensure the protection of traditional navigable waters of the United States. It also protects farmers, ranchers and private landowners by directing the Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers to issue a revised “Waters of the United States” (WOTUS) rule that does not include things such as isolated ponds, ditches, agriculture water, storm water, groundwater, floodwater, municipal water supply systems, wastewater management systems, and streams without enough flow to carry pollutants to navigable waters.

## Senate Advances Bill to Ensure Open EPA Science

### *Senate EPW Committee passed Secret Science Reform Act*

April 28, 2015

WASHINGTON D.C. – Today, U.S. Senators John Barrasso (R-WY) and David Vitter (R-LA) praised the Senate Environment and Public Works (EPW) Committee for passing the Secret Science Reform Act (S. 544). Barrasso, Vitter and EPW Committee Chairman Jim Inhofe (R-OK) introduced the bill in February to ensure future Environmental Protection Agency (EPA) regulations are based on the best available science. Similar legislation passed the House in the 113th Congress with bipartisan support.

“As a doctor, I know that the best data and research are thoroughly tested, reproducible and publicly available,” said Barrasso. “Today the Committee voted to require the EPA to give Americans direct access to the science used to justify regulations that impact everything from jobs to our environment. Our bill will give Americans more confidence that the EPA’s policies will deliver the environmental and public health benefits that the agency has promised.”

## Barrasso Calls for Oversight of Uranium Trader Following Former DOE Official Poneman Appointment

### *Senator sends letter to Secretary Moniz in response to Department of Energy testimony before the House Oversight and Government Reform Committee.*

April 23, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-WY) sent a letter to Energy Secretary Moniz in response to the Department of Energy’s (DOE) testimony at yesterday’s hearing before the House Oversight and Government Reform Committee.

At the hearing, a DOE official indicated that DOE does not review uranium contracts involving the Traxys Group, a uranium commodities trader, which recently appointed former Deputy Secretary of Energy Daniel Poneman to its Board of Directors.

Since 2011, DOE has transferred roughly \$900 million of publicly-owned uranium which has financially benefitted Traxys.

## Senators Reintroduce Bipartisan Alternative Fuels Bill

*Bill would allow the U.S. military and federal agencies to purchase transportation fuel produced from coal, oil shale and oil sands.*

April 21, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Manchin (D-WV), Heidi Heitkamp (D-ND) and others reintroduced the bipartisan North American Alternative Fuels Act. The bill would repeal section 526 of the Energy Independence and Security Act (EISA) of 2007 which prohibits the federal government, including the U.S. military, from purchasing fuel produced from coal, oil shale and oil sands.

“Our nation’s military should have access to any and all fuel sources it needs to achieve its mission,” said Senator Barrasso. “Instead of giving preference to oil imported from overseas, Washington should look to North American coal, oil shale and oil sands, all of which provide an affordable, abundant and alternative source of fuel. In addition to increasing cost effectiveness options for the government, it will also increase America’s energy security.”

[John Barrasso - United States Senator, Wyoming](#) 

Dear Friend,

The EPA and the U.S. Army Corps of Engineers (USACE) are once again overreaching and trying to expand the Clean Water Act in an extreme way. Instead of working to preserve beautiful rivers, like our Snake River and Wind River, these agencies are seeking to regulate agriculture water, irrigation ditches, isolated ponds and other non-navigable waters as "Waters of the U.S." I've heard from so many people across our state who are concerned that the EPA's proposal would hurt Wyoming residents, their land and their businesses.

This week, along with a bipartisan group of senators, I introduced the Federal Water Quality Protection Act. This bill will protect America's waterways - and America's farmers, ranchers and landowners. If you are interested in learning more information about our bill, please click [here](#).

By striking the right balance, we'll keep our waterways safe and pristine and allow them to be used as natural resources.

Best Wishes,

Senator John Barrasso, M.D.

## Barrasso Highlights Bipartisan Bill to Protect America’s Waterways

*“This bill says Yes to clean water – and No to extreme bureaucracy. It will give the Environmental Protection Agency the direction it needs – the direction to write a strong and reasonable rule, that truly protects America’s waterways. One that keeps Washington’s hands off of the things like irrigation ditches, isolated ponds, and groundwater.”*

April 30, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-Wyo.) delivered the following remarks on the Senate floor about the bipartisan Federal Water Quality Protection Act (S. 1140) that he introduced today. The bill would direct the Environmental Protection Agency and Army Corps of Engineers to issue a revised “waters of the United States” (WOTUS) rule that protects traditional navigable water from water pollution, while also protecting farmers, ranchers and private landowners.

## Senators Introduce Bipartisan Bill to Protect Navigable Waters in the United States

*Bipartisan bill will direct EPA and Army Corps of Engineers to issue a revised WOTUS rule that protects traditional navigable water from water pollution, while*

*also protecting farmers, ranchers and private landowners.*

April 30, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Donnelly (D-IN), Jim Inhofe (R-OK), Heidi Heitkamp (D-ND), Pat Roberts (R-KS) and Joe Manchin (D-WV), led a bipartisan group of senators in introducing the Federal Water Quality Protection Act (S. 1140).

The bipartisan legislation will ensure the protection of traditional navigable waters of the United States. It also protects farmers, ranchers and private landowners by directing the Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers to issue a revised “Waters of the United States” (WOTUS) rule that does not include things such as isolated ponds, ditches, agriculture water, storm water, groundwater, floodwater, municipal water supply systems, wastewater management systems, and streams without enough flow to carry pollutants to navigable waters.

## Senate Advances Bill to Ensure Open EPA Science

### *Senate EPW Committee passed Secret Science Reform Act*

April 28, 2015

WASHINGTON D.C. – Today, U.S. Senators John Barrasso (R-WY) and David Vitter (R-LA) praised the Senate Environment and Public Works (EPW) Committee for passing the Secret Science Reform Act (S. 544). Barrasso, Vitter and EPW Committee Chairman Jim Inhofe (R-OK) introduced the bill in February to ensure future Environmental Protection Agency (EPA) regulations are based on the best available science. Similar legislation passed the House in the 113th Congress with bipartisan support.

“As a doctor, I know that the best data and research are thoroughly tested, reproducible and publicly available,” said Barrasso. “Today the Committee voted to require the EPA to give Americans direct access to the science used to justify regulations that impact everything from jobs to our environment. Our bill will give Americans more confidence that the EPA’s policies will deliver the environmental and public health benefits that the agency has promised.”

## Barrasso Calls for Oversight of Uranium Trader Following Former DOE Official Poneman Appointment

### *Senator sends letter to Secretary Moniz in response to Department of Energy testimony before the House Oversight and Government Reform Committee.*

April 23, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-WY) sent a letter to Energy Secretary Moniz in response to the Department of Energy’s (DOE) testimony at yesterday’s hearing before the House Oversight and Government Reform Committee.

At the hearing, a DOE official indicated that DOE does not review uranium contracts involving the Traxys Group, a uranium commodities trader, which recently appointed former Deputy Secretary of Energy Daniel Poneman to its Board of Directors.

Since 2011, DOE has transferred roughly \$900 million of publicly-owned uranium which has financially benefitted Traxys.

## Senators Reintroduce Bipartisan Alternative Fuels Bill

*Bill would allow the U.S. military and federal agencies to purchase transportation fuel produced from coal, oil shale and oil sands.*

April 21, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Manchin (D-WV), Heidi Heitkamp (D-ND) and others reintroduced the bipartisan North American Alternative Fuels Act. The bill would repeal section 526 of the Energy Independence and Security Act (EISA) of 2007 which prohibits the federal government, including the U.S. military, from purchasing fuel produced from coal, oil shale and oil sands.

“Our nation’s military should have access to any and all fuel sources it needs to achieve its mission,” said Senator Barrasso. “Instead of giving preference to oil imported from overseas, Washington should look to North American coal, oil shale and oil sands, all of which provide an affordable, abundant and alternative source of fuel. In addition to increasing cost effectiveness options for the government, it will also increase America’s energy security.”

[John Barrasso - United States Senator, Wyoming](#) 

Dear Friend,

The EPA and the U.S. Army Corps of Engineers (USACE) are once again overreaching and trying to expand the Clean Water Act in an extreme way. Instead of working to preserve beautiful rivers, like our Snake River and Wind River, these agencies are seeking to regulate agriculture water, irrigation ditches, isolated ponds and other non-navigable waters as "Waters of the U.S." I've heard from so many people across our state who are concerned that the EPA's proposal would hurt Wyoming residents, their land and their businesses.

This week, along with a bipartisan group of senators, I introduced the Federal Water Quality Protection Act. This bill will protect America's waterways - and America's farmers, ranchers and landowners. If you are interested in learning more information about our bill, please click [here](#).

By striking the right balance, we'll keep our waterways safe and pristine and allow them to be used as natural resources.

Best Wishes,

Senator John Barrasso, M.D.

## WY Oil and Gas Supervisor Testifies Before Senate on BLM Fracking Rule

April 30, 2015

WASHINGTON, DC – Today, U.S. Senator John Barrasso (R-Wyo.) welcomed Wyoming Oil and Gas Supervisor Mark Watson before the Senate Energy and Natural Resources Subcommittee on Public Lands, Forests, and Mining. Senator Barrasso, who chairs the subcommittee, invited Supervisor Mark Watson to testify about the Bureau of Land Management’s (BLM) final hydraulic fracturing rule.

“In Wyoming, about 47 percent of the surface estate and 67 percent of the mineral estate is owned by the federal government. This means that decisions made in Washington have an extraordinary impact on the people of Wyoming,” said Barrasso. “It’s hard to find someone who understands this reality more than Wyoming’s Oil and Gas Supervisor Mark Watson. I want to thank him for sharing his firsthand experiences with our committee today.”

It will give the Environmental Protection Agency the direction it needs – the direction to write a strong and reasonable rule, that truly protects America’s waterways. One that keeps Washington’s hands off of the things like irrigation ditches, isolated ponds, and groundwater.”*

April 30, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-Wyo.) delivered the following remarks on the Senate floor about the bipartisan Federal Water Quality Protection Act (S. 1140) that he introduced today. The bill would direct the Environmental Protection Agency and Army Corps of Engineers to issue a revised “waters of the United States” (WOTUS) rule that protects traditional navigable water from water pollution, while also protecting farmers, ranchers and private landowners.

## Senators Introduce Bipartisan Bill to Protect Navigable Waters in the United States

*Bipartisan bill will direct EPA and Army Corps of Engineers to issue a revised WOTUS rule that protects traditional navigable water from water pollution, while*

*also protecting farmers, ranchers and private landowners.*

April 30, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Donnelly (D-IN), Jim Inhofe (R-OK), Heidi Heitkamp (D-ND), Pat Roberts (R-KS) and Joe Manchin (D-WV), led a bipartisan group of senators in introducing the Federal Water Quality Protection Act (S. 1140).

The bipartisan legislation will ensure the protection of traditional navigable waters of the United States. It also protects farmers, ranchers and private landowners by directing the Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers to issue a revised “Waters of the United States” (WOTUS) rule that does not include things such as isolated ponds, ditches, agriculture water, storm water, groundwater, floodwater, municipal water supply systems, wastewater management systems, and streams without enough flow to carry pollutants to navigable waters.

## Senate Advances Bill to Ensure Open EPA Science

### *Senate EPW Committee passed Secret Science Reform Act*

April 28, 2015

WASHINGTON D.C. – Today, U.S. Senators John Barrasso (R-WY) and David Vitter (R-LA) praised the Senate Environment and Public Works (EPW) Committee for passing the Secret Science Reform Act (S. 544). Barrasso, Vitter and EPW Committee Chairman Jim Inhofe (R-OK) introduced the bill in February to ensure future Environmental Protection Agency (EPA) regulations are based on the best available science. Similar legislation passed the House in the 113th Congress with bipartisan support.

“As a doctor, I know that the best data and research are thoroughly tested, reproducible and publicly available,” said Barrasso. “Today the Committee voted to require the EPA to give Americans direct access to the science used to justify regulations that impact everything from jobs to our environment. Our bill will give Americans more confidence that the EPA’s policies will deliver the environmental and public health benefits that the agency has promised.”

## Barrasso Calls for Oversight of Uranium Trader Following Former DOE Official Poneman Appointment

### *Senator sends letter to Secretary Moniz in response to Department of Energy testimony before the House Oversight and Government Reform Committee.*

April 23, 2015

WASHINGTON, D.C. – Today, U.S. Senator John Barrasso (R-WY) sent a letter to Energy Secretary Moniz in response to the Department of Energy’s (DOE) testimony at yesterday’s hearing before the House Oversight and Government Reform Committee.

At the hearing, a DOE official indicated that DOE does not review uranium contracts involving the Traxys Group, a uranium commodities trader, which recently appointed former Deputy Secretary of Energy Daniel Poneman to its Board of Directors.

Since 2011, DOE has transferred roughly \$900 million of publicly-owned uranium which has financially benefitted Traxys.

## Senators Reintroduce Bipartisan Alternative Fuels Bill

*Bill would allow the U.S. military and federal agencies to purchase transportation fuel produced from coal, oil shale and oil sands.*

April 21, 2015

WASHINGTON, DC – Today, U.S. Senators John Barrasso (R-WY), Joe Manchin (D-WV), Heidi Heitkamp (D-ND) and others reintroduced the bipartisan North American Alternative Fuels Act. The bill would repeal section 526 of the Energy Independence and Security Act (EISA) of 2007 which prohibits the federal government, including the U.S. military, from purchasing fuel produced from coal, oil shale and oil sands.

“Our nation’s military should have access to any and all fuel sources it needs to achieve its mission,” said Senator Barrasso. “Instead of giving preference to oil imported from overseas, Washington should look to North American coal, oil shale and oil sands, all of which provide an affordable, abundant and alternative source of fuel. In addition to increasing cost effectiveness options for the government, it will also increase America’s energy security.”

[John Barrasso - United States Senator, Wyoming](#)

Dear Friend,

The EPA and the U.S. Army Corps of Engineers (USACE) are once again overreaching and trying to expand the Clean Water Act in an extreme way. Instead of working to preserve beautiful rivers, like our Snake River and Wind River, these agencies are seeking to regulate agriculture water, irrigation ditches, isolated ponds and other non-navigable waters as "Waters of the U.S." I've heard from so many people across our state who are concerned that the EPA's proposal would hurt Wyoming residents, their land and their businesses.

This week, along with a bipartisan group of senators, I introduced the Federal Water Quality Protection Act. This bill will protect America's waterways - and America's farmers, ranchers and landowners. If you are interested in learning more information about our bill, please click [here](#).

By striking the right balance, we'll keep our waterways safe and pristine and allow them to be used as natural resources.

Best Wishes,

Senator John Barrasso, M.D.

## WY Oil and Gas Supervisor Testifies Before Senate on BLM Fracking Rule

April 30, 2015

WASHINGTON, DC – Today, U.S. Senator John Barrasso (R-Wyo.) welcomed Wyoming Oil and Gas Supervisor Mark Watson before the Senate Energy and Natural Resources Subcommittee on Public Lands, Forests, and Mining. Senator Barrasso, who chairs the subcommittee, invited Supervisor Mark Watson to testify about the Bureau of Land Management’s (BLM) final hydraulic fracturing rule.

“In Wyoming, about 47 percent of the surface estate and 67 percent of the mineral estate is owned by the federal government. This means that decisions made in Washington have an extraordinary impact on the people of Wyoming,” said Barrasso. “It’s hard to find someone who understands this reality more than Wyoming’s Oil and Gas Supervisor Mark Watson. I want to thank him for sharing his firsthand experiences with our committee today.”

---

All, as former HF rule PMs, this is the official memo for any records that you may have in your possession from the time of your tenure in the rulemaking. It sounds like there are no additional records, but we need to ask and let us know if you have any to provide. Thank you again for your time, and your past service in helping BLM,  
steve

On Sat, May 2, 2015 at 10:31 AM, Hawbecker, Karen <[karen.hawbecker@sol.doi.gov](mailto:karen.hawbecker@sol.doi.gov)> wrote:

On March 20 and March 26, 2015, Independent Petroleum Association of America, Western Energy Alliance, and the State of Wyoming filed complaints against the Department of the Interior in the U.S. District Court for the District of Wyoming. The States of Colorado and North Dakota have also joined in the litigation. The suits challenge BLM's final hydraulic fracturing (HF) rule. I am writing to remind you of your legal obligation to immediately take all reasonable steps to preserve documents and data that are related to or in any way relevant to this litigation. The administrative record is due to be filed no later than June 24, 2015.

The attached memorandum provides more information about the above-referenced lawsuits, as well as detailed guidance about the types of documents that should be preserved. Also, as noted in the memorandum, we are requesting that you distribute the attached memorandum to any and all personnel in your office who might have any information related or relevant to preparation of the HF rule.

Please ensure that your personnel take appropriate action and document the steps they take to comply with this memorandum. We are also asking your assistance in producing the relevant documentation as soon as possible.

As explained in the attached memorandum, please confirm your receipt and understanding of the litigation hold by sending an email to Richard McNeer

([Richard.McNeer@sol.doi.gov](mailto:Richard.McNeer@sol.doi.gov)) and Eric Olson ([ecolson@blm.gov](mailto:ecolson@blm.gov)) no later than Friday, May 8, that includes the statement at the end of the memorandum. Please contact Richard McNeer if you have any questions related to this litigation hold or to your obligation to preserve potentially relevant documents. If you identify relevant documents, please inform them of their existence and preserve and produce them as described in the memorandum.

Thank you for your cooperation.

**FROM:** Karen Hawbecker, Associate Solicitor  
Division of Mineral Resources

**RE:      **Litigation Hold and Retention of Records Required****  
*Independent Petroleum Ass'n of America v. Jewell*, Case No. 15-cv-41-F (D. Wyo.),  
filed March 20, 2015; and *State of Wyoming v. U.S. Dept. of the Interior*, Case No.  
15-cv-43-S (D. Wyo.), filed March 26, 2015.

Please be advised that the Office of the Solicitor requires your assistance with respect to preserving agency information in the above-referenced lawsuits.

On March 20 and March 26, 2015, Independent Petroleum Association of America, Western Energy Alliance, and the State of Wyoming filed complaints against the Department of the Interior in the U.S. District Court for the District of Wyoming. The States of Colorado and North Dakota have also joined in the litigation. The suits challenge BLM's final hydraulic fracturing (HF) rule.

The local rules for the Wyoming District require filing of an administrative record within 90 days after complaint is filed. In this case, the administrative record is due to be filed no later than June 24, 2015. Consequently, we are writing to remind you of your legal obligation to preserve documents and data that are related to or in any way relevant to the preparation of the HF rule. We are also requesting your assistance in gathering the relevant documentation as soon as possible.

The HF rulemaking commenced with publication of the initial notice of proposed rulemaking on May 11, 2012, at 77 Fed. Reg. 22,7691. The rulemaking, though, was preceded by the Department's public forums on hydraulic fracturing, outreach to tribes, and review of studies, reports and recommendations from other agencies or other entities. A supplemental proposed rule was published at 78 Fed. Reg. 31,636 (May 24, 2013). The BLM's final HF rule was published on March 26, 2015 (80 Fed. Reg. 16,128). The Federal Register published a notice correcting two errors in the rule's implementation schedule on March 30, 2015 (80 Fed. Reg. 16,577). The HF rule creates new procedural requirements and substantive standards for oil and gas operators that hydraulically fracture oil and gas wells on Federal or Indian lands.

Please forward these instructions to any and all personnel in your office who might have any information related or relevant to preparation of the hydraulic fracturing rule and copy Richard McNeer ([Richard.McNeer@sol.doi.gov](mailto:Richard.McNeer@sol.doi.gov)) and Eric Olson ([ecolson@blm.gov](mailto:ecolson@blm.gov)) on that communication. Please also ensure that you and your personnel take appropriate action and document the steps taken to comply with this memorandum.

**Attorney-Client Privileged Communication**

The documents and data to be preserved include not only paper documents, maps, videos, calendars, charts, and similar items, but also all electronically stored information, such as emails, audio recordings, videotape, instant messages, word processing files, spreadsheets, databases, calendars, telephone logs, contact manager information, and Internet usage files. Potential sources of this information include paper files, computer hard drives, laptop computers, CDs/DVDs, thumb drives, PDAs, Blackberry devices, and any other location where paper documents or electronic data is stored. Sources of potentially relevant information may also include personal computers or personal email accounts you use or have access to at home, or anywhere else. Please note that electronically stored information must be preserved in its original electronic form, so that all information contained in it, including metadata, is preserved and available for inspection.

In order to comply with the Department's legal obligations, you need to immediately take reasonable steps to **preserve all documents and information related to or in any way relevant to agency actions identified above, and suspend deletion, overwriting, or any other possible destruction of such information.** Effective immediately, all routine destruction efforts under existing document management and email policies must be suspended for all such information. Instead, this information should be stored in such a manner as to be safely retained and accessible in case of future litigation. This obligation also extends to records maintained in off-site storage facilities and to the files and documents of any departing employees.

Supervisors must immediately notify the appropriate technical personnel responsible for operating the systems that store potentially relevant electronic records, or who are responsible for storing paper or other hard-copy records, of the need to preserve the records. Please direct these individuals that they are not to destroy any potentially relevant records until advised by the Office of the Solicitor that they may resume normal destruction of records in accordance with records retention schedules. Supervisors must also identify any current or past employees who might have relevant documents who are not listed on this memorandum. If possible, please provide a phone number and e-mail address for those not listed on this memorandum.

**What must you do to comply with this notice if you have potentially relevant documents?**

- **Search.** Search now and identify all sources of information related to this matter as soon as possible, including all types of hard copy documents and electronically stored information.
  - **Search terms should include, at a minimum, the following: hydraulic fracturing, hydrofracturing, hydro-fracking, hydrofracking, fracking, HF rule, FracFocus.**
  - **The search time frame for most documents is May 11, 2012 through March 26, 2015. However, because the preamble to the final rule refers to the public forums that began in late 2010, and to meetings with tribal representatives that also predated the publication of the initial notice of proposed**

**rulemaking, anyone likely to have access to documents related to those forums or meetings needs to preserve them.**

If you identify relevant documents, please inform Richard McNeer ([Richard.McNeer@sol.doi.gov](mailto:Richard.McNeer@sol.doi.gov)) and Eric Olson ([ecolson@blm.gov](mailto:ecolson@blm.gov)) that the documents exist and preserve them as discussed above. Additionally, if your office does **not** have any relevant or related documents, please affirmatively inform them of that fact.

- **Save.** Save your documents. The preservation obligation extends to records maintained in off-site storage facilities such as Federal Records Centers. Therefore, you must take affirmative steps to prevent the destruction of any potentially relevant information that has been transferred to a Federal Records Center or any other location. Do not transfer any potentially relevant information to a Federal Records Center or any other location at this time. You must save all this information until you are notified by the Solicitor's Office that the litigation hold has been lifted. Before you depart or retire, ensure that the agency retains access to potentially relevant information.
- **Segregate.** Promptly move all hard copy documents, e-mails, and other electronically stored information into separate folders that you designate for this matter. In the case of electronically stored information, designate a folder on your local network, not in your e-mail or on your hard drive, which may be subject to routine deletion policies. This will prevent information from being lost in the normal operation of your computer system.
- **Transmit relevant documents.** The BLM project manager for this administrative record will send instructions about how to transmit any relevant documents in your control to the appropriate location for timely review and possible inclusion in the administrative record. Be prepared to follow those instructions as promptly as possible in order for the record to be filed within the court's deadline.

Please contact Richard McNeer at 202-208-5180 or email him at [Richard.McNeer@sol.doi.gov](mailto:Richard.McNeer@sol.doi.gov) if you have any questions related to this litigation hold or to your obligation to preserve potentially relevant evidence. Thank you for your cooperation.

**By May 8, 2015, please acknowledge to us by email at the above email addresses your receipt of this litigation hold and your consent to act on its instructions by including in your email the following language:**

**I acknowledge that I have received a copy of and read the memorandum entitled “Litigation Hold and Retention of Records Required” dated May 4, 2014, in the matter of *IPAA. v. Jewell*, and I agree to take all reasonable steps necessary to preserve and produce the documents and data as instructed.**

**Subject:** Questions for the Record from the Senate ENR Committee" Subcmte on Public Lands, Forests, and Mining on April 30, 2015  
**Date:** Thursday, May 07, 2015 1:07:45 PM  
**Attachments:** [QFRs for Director Kornze 4-30-15 ENR PLFM Subcmte Hrg.docx](#)

---

Good afternoon, Director Kornze. Attached are Questions for the Record which have been submitted to you by various Members of the ENR Committee from the subcommittee hearing which was held last Thursday regarding "The BLM's Final Rule on Hydraulic Fracturing." We respectfully request that you provide your responses to these questions by **Thursday, May 21, 2015** for inclusion in the official hearing record.

Please provide the responses directly to me, and feel free to contact me if you have any questions. Thank you for your assistance with this request.

Sincerely,

Darla Ripchensky, PMP  
Administrative Director  
U.S. Senate Committee on Energy and Natural Resources  
304 Dirksen Senate Office Building  
Washington, DC 20510  
202.224.3607

**U.S. Senate Committee on Energy and Natural Resources  
April 30, 2015 Hearing: BLM Hydraulic Fracturing Rule  
Questions for the Record Submitted to the Honorable Neil Kornze**

**Questions from Senator John Barrasso**

**Question 1:** The Bureau of Land Management’s final rule on hydraulic fracturing says that: “The BLM believes that there will be no financial impacts to the states as a result of this rule.” It goes on to say that: “the BLM does not believe that production from Federal lands will be reduced as a result of this rule. Therefore, a Federalism assessment is not required.” At the hearing, I asked you: (1) whether BLM relied on any empirical data to show that a rule of this significance would not reduce oil and gas production on federal lands; and (2) if BLM did not rely on empirical data, what is the basis for BLM’s finding that the rule will not reduce oil and gas production on federal lands?

In response, you indicated that you would provide a written answer to this question. I look forward to your answer.

**Question 2:** BLM has not issued a final environmental impact statement (EIS) for an oil and gas production project in Wyoming since 2008. Currently, there are nine EISs for oil and gas production projects in Wyoming pending with BLM. Some of the EISs have been pending with BLM for more than 8 years. During the hearing, you said that “about half of those [project proposals] came in in the last two years.” Of these nine, you indicated that BLM would issue two to three final EISs in Wyoming this year.

- A. Would you please provide the date that each of the nine projects were first proposed to BLM?
- B. Would you please provide the date (month/year) when we can expect BLM to issue the final EIS for each of the nine projects?

**Question 3:** On April 17, 2015, the Secretary of the Interior issued an advanced notice of proposed rulemaking for the purpose of seeking public comment on potential updates to BLM rules governing oil and gas royalty rates, rental payments, lease sale minimum bids, civil penalty caps and financial assurances.

I am concerned that any proposal to raise royalty rates and other fees will put federal lands at an even greater competitive disadvantage with state and private lands—and, as a consequence, Wyoming and other public land states at a greater disadvantage with other areas of the country.

In 2011, DOI commissioned a study which found that higher royalty rates for federal lands in Wyoming “will deteriorate their competitive position in the market, which is rather weak as it is.”

On March 14, 2012, then BLM Director, Bob Abbey, testified before the Senate that there has been “a shift [in oil and gas production] to private lands in the East and to the South where there are fewer amounts of Federal mineral estate.”

**U.S. Senate Committee on Energy and Natural Resources**  
**April 30, 2015 Hearing: BLM Hydraulic Fracturing Rule**  
**Questions for the Record Submitted to the Honorable Neil Kornze**

According to the Energy Information Administration (EIA), federal onshore natural gas production has decreased by 22 percent since 2009. EIA has found that federal onshore natural gas production makes up a smaller percentage of total U.S. gas production than it has in at least 11 years. EIA has also found that federal onshore oil production makes up a smaller percentage of total U.S. oil production than it has in nine years. While these numbers reflect new production on state and private lands, they also show that federal lands are becoming less competitive with state and private lands.

Please explain, in detail, how raising the royalty rates on onshore oil and gas production on federal lands will not further reduce their competitive position relative to state and private lands. In your answer, please address the additional regulatory burdens, including those associated with the National Environmental Policy Act, which apply to oil and gas production on federal lands but not oil and gas production on state and private lands.

**Question 4:** I understand there are significant delays in obtaining sundry notices and rights-of-way (ROWs) for natural gas gathering lines on federal lands from BLM.

In February 2015, I asked Secretary Jewell to provide detailed information about pending requests for sundry notices and ROWs for natural gas gathering lines on federal land.

In response, the Secretary explained that BLM “lacks capability to query for details of each sundry notice” and BLM, with respect to requests for ROWs, “does not distinguish between requests for oil or gas, gathering or transport, lines.”

- A. What is the total number of requests for ROWs pending at BLM?
- B. What is the total number of requests for ROWs pending at each BLM Field Office?
- C. When were each of the pending requests for ROWs first submitted to BLM?

**Question 5:** Secretary Jewell has stated that BLM will propose a new rule for flaring and venting of natural gas on federal lands and Indian lands shortly.

Does BLM plan to conduct a federalism assessment on the impacts of the proposed rule to states pursuant to Executive Order 13132? If not, why not?

**Questions from Senator Lisa Murkowski**

**Question 1:** The Montana BLM office already oversees the North Dakota mineral activities, and Washington state and Oregon activities are managed out of the Portland office. E&E reported March 13, 2015 that there is speculation of a merger of the New Mexico and Arizona BLM offices. Is consolidation of the state offices part of a larger

**U.S. Senate Committee on Energy and Natural Resources  
April 30, 2015 Hearing: BLM Hydraulic Fracturing Rule  
Questions for the Record Submitted to the Honorable Neil Kornze**

policy vision for the future organizational structure of the BLM, and if so, what impacts and results does the BLM anticipate from such a shift?

**Question 2:** You stated during the hearing that significant consultations with States and Tribes occurred in the development of the rule. Did BLM consult with the State of Alaska, the Alaska Oil and Gas Conservation Commission, Alaska Native Village or Regional Corporations or tribal councils? Please list the entities in Alaska with whom the BLM consulted in the development of this rule.

**Questions from Senator Jeff Flake**

**Question 1:** On Friday, April 24, BLM Deputy Director Steve Ellis held a congressional briefing on a proposal to merge the Arizona and New Mexico state BLM offices. Can you provide an update on the status of that decision making process? That is, when does BLM plan to make a decision?

**Question 2:** If BLM decides to move forward with merging the offices, what sort of notice and consultation is the Bureau required to engage in with Congress before finalizing its decision?

**Question 3:** What type of outreach has the BLM conducted with interested stakeholders in Arizona and New Mexico?

**Question 4:** During the briefing, Deputy Secretary Ellis made frequent references to the joint offices in Oregon and Washington, as well as Montana and the Dakotas. Please provide information on the average length of time it takes those offices to process permits, environmental analyses, and other approvals before and after those officer mergers were completed.

**Question 5:** Please provide information on the cost savings that were realized from prior BLM office mergers (e.g., Oregon-Washington, Montana-Dakotas), and whether those cost savings were retained by those new regional offices or used elsewhere in the Bureau.

**Questions from Senator Mazie Hirono**

**Question 1: BLM MOU with FracFocus**

At the time that the Bureau of Land Management published the final rule on hydraulic fracturing on public lands the agency indicated that it was entering into a MOU with the managers of FracFocus to clear up concerns and recommendations by the Department of Energy's Science Advisory Board relating to functionality and accessibility of data.

**U.S. Senate Committee on Energy and Natural Resources**  
**April 30, 2015 Hearing: BLM Hydraulic Fracturing Rule**  
**Questions for the Record Submitted to the Honorable Neil Kornze**

Can you explain in more detail the specifics of the MOU? Does it address all recommendations and actions in the Department of Energy's FracFocus 2.0 report or only a portion of those?

**Question 2: Environmental Impacts of Fracking**

*The New Yorker* recently ran a lengthy piece that discussed the linkage between oil and gas development and the frequency of earthquake activity in Oklahoma. It noted that "Until 2008, Oklahoma experienced an average of one to two earthquakes of 3.0 magnitude or greater each year. In 2014, there were five hundred and eighty-five, nearly triple the rate of California. Including smaller earthquakes in the count, there were more than five thousand."

The article goes on to say, "Disposal wells trigger earthquakes when they are dug too deep, near or into basement rock, or when the wells impinge on a fault line." The research geologist from the United States Geological Survey that was interviewed for the article said, when discussing the linkage, "Scientifically, it's really quite clear." Do you agree with the USGS geologist that oil and gas exploration has contributed to increased seismic activity? Do you believe that additional steps should be taken to limit hydraulic fracturing or better regulate the placement of disposal wells, which house wastewater from hydraulic fracturing, in areas known to trigger earthquakes?

**Date:** Thursday, May 21, 2015 12:48:48 PM

---

## The Udall Update

Having trouble seeing this e-mail? [Click here to read it on my blog.](#)

Dear Friend,

Here in New Mexico, we're fortunate to have an abundance of renewable energy resources like solar, wind and biomass, plus the ingenuity to develop a strong clean energy economy. And with climate change contributing to drought and more severe wildfires across the West, there's no time to lose.

We must seize the opportunity to develop our clean energy resources in New Mexico and throughout the country so we can lead the world in innovation and create the jobs of the future. Combined with energy from traditional sources, smart investments in renewables make sense for our economy, our environment and our livelihoods.

That's why I'm continuing my fight for a Renewable Electricity Standard. Last week, I introduced a bill to create a national threshold for utilities to generate 30 percent of their electricity from renewable energy sources by 2030.

**Join me and call on Congress to take action for clean energy jobs by passing a "30-by-30" national Renewable Electricity Standard.**

Setting a goal will give renewable energy innovators the certainty they need to grow and create jobs — hundreds of thousands of good-paying clean energy jobs that cannot be outsourced.

New Mexico and more than half the other states already have wildly successful renewable electricity policies, and it's time to go all in. In January, almost half of the Senate voted for a similar plan I introduced to create a national Renewable Electricity Standard — showing that there's bipartisan support for such a forward-looking energy

policy.

My new bill would further help our country diversify its energy sources. It lays out a realistic timeline with achievable deadlines, setting an 8 percent requirement by 2016 and manageable increases to meet the 30 percent target by 2030. It puts us on the path toward the “do it all, do it right” energy strategy I’ve long advocated.

**Support clean energy jobs and call on Congress to invest in our future by passing a “30-by-30” national Renewable Electricity Standard.**

A national Renewable Electricity Standard would save consumers more than \$25 billion on utility bills and drive nearly \$300 billion in new capital investments. It’s an economic boost that just makes sense.

With you by my side, I’ll keep fighting to grow New Mexico’s economy and put our country on a path toward energy independence while combatting climate change. We can’t afford to keep kicking the can down the road.

Cheers,

Tom Udall  
United States Senator

Combined with energy from traditional sources, smart investments in renewables make sense for our economy, our environment and our livelihoods.

That's why I'm continuing my fight for a Renewable Electricity Standard. Last week, I introduced a bill to create a national threshold for utilities to generate 30 percent of their electricity from renewable energy sources by 2030.

**Join me and call on Congress to take action for clean energy jobs by passing a "30-by-30" national Renewable Electricity Standard.**

Setting a goal will give renewable energy innovators the certainty they need to grow and create jobs — hundreds of thousands of good-paying clean energy jobs that cannot be outsourced.

New Mexico and more than half the other states already have wildly successful renewable electricity policies, and it's time to go all in. In January, almost half of the Senate voted for a similar plan I introduced to create a national Renewable Electricity Standard — showing that there's bipartisan support for such a forward-looking energy

policy.

My new bill would further help our country diversify its energy sources. It lays out a realistic timeline with achievable deadlines, setting an 8 percent requirement by 2016 and manageable increases to meet the 30 percent target by 2030. It puts us on the path toward the “do it all, do it right” energy strategy I’ve long advocated.

**Support clean energy jobs and call on Congress to invest in our future by passing a “30-by-30” national Renewable Electricity Standard.**

A national Renewable Electricity Standard would save consumers more than \$25 billion on utility bills and drive nearly \$300 billion in new capital investments. It’s an economic boost that just makes sense.

With you by my side, I’ll keep fighting to grow New Mexico’s economy and put our country on a path toward energy independence while combatting climate change. We can’t afford to keep kicking the can down the road.

Cheers,

Tom Udall  
United States Senator

Dear Friend,

Here in New Mexico, we're fortunate to have an abundance of renewable energy resources like solar, wind and biomass, plus the ingenuity to develop a strong clean energy economy. And with climate change contributing to drought and more severe wildfires across the West, there's no time to lose.

We must seize the opportunity to develop our clean energy resources in New Mexico and throughout the country so we can lead the world in innovation and create the jobs of the future. Combined with energy from traditional sources, smart investments in renewables make sense for our economy, our environment and our livelihoods.

That's why I'm continuing my fight for a Renewable Electricity Standard. Last week, I introduced a bill to create a national threshold for utilities to generate 30 percent of their electricity from renewable energy sources by 2030.

Setting a goal will give renewable energy innovators the certainty they need to grow and create jobs — hundreds of thousands of good-paying clean energy jobs that cannot be outsourced.

New Mexico and more than half the other states already have wildly successful renewable electricity policies, and it's time to go all in. In January, almost half of the Senate voted for a similar plan I introduced to create a national Renewable Electricity Standard — showing that there's bipartisan support for such a forward-looking energy

policy.

My new bill would further help our country diversify its energy sources. It lays out a realistic timeline with achievable deadlines, setting an 8 percent requirement by 2016 and manageable increases to meet the 30 percent target by 2030. It puts us on the path toward the “do it all, do it right” energy strategy I’ve long advocated.

**Support clean energy jobs and call on Congress to invest in our future by passing a “30-by-30” national Renewable Electricity Standard.**

A national Renewable Electricity Standard would save consumers more than \$25 billion on utility bills and drive nearly \$300 billion in new capital investments. It’s an economic boost that just makes sense.

With you by my side, I’ll keep fighting to grow New Mexico’s economy and put our country on a path toward energy independence while combatting climate change. We can’t afford to keep kicking the can down the road.

Cheers,

Tom Udall  
United States Senator

Dear Friend,

Here in New Mexico, we're fortunate to have an abundance of renewable energy resources like solar, wind and biomass, plus the ingenuity to develop a strong clean energy economy. And with climate change contributing to drought and more severe wildfires across the West, there's no time to lose.

We must seize the opportunity to develop our clean energy resources in New Mexico and throughout the country so we can lead the world in innovation and create the jobs of the future. Combined with energy from traditional sources, smart investments in renewables make sense for our economy, our environment and our livelihoods.

That's why I'm continuing my fight for a Renewable Electricity Standard. Last week, I introduced a bill to create a national threshold for utilities to generate 30 percent of their electricity from renewable energy sources by 2030.

**Join me and call on Congress to take action for clean energy jobs by passing a "30-by-30" national Renewable Electricity Standard.**

Setting a goal will give renewable energy innovators the certainty they need to grow and create jobs — hundreds of thousands of good-paying clean energy jobs that cannot be outsourced.

Hi Ed,

It won't be Jenna, but I will see if they have someone else who would be appropriate at 4 today. Also, either way, attached is the most recent update summary paper they provided to local staffers during their April quarterly briefing.

Hi Ed,

Jenna is in St. George tomorrow, so she wouldn't be available (but could do Wednesday). If you want to meet with someone else, she thinks it's likely that folks will be around - just let me know what the topic is and we can find someone who would hopefully be helpful.  
Thanks!

I am not able to get through to Utah BLMs website. I want to set up a meeting with them for 4:00 MST back in Utah in the SLC office.

**BLM-Utah**  
**Legislative Staff Briefing**  
**April 16, 2015**

**SUBJECT: ENERGY**

**Conventional Energy**

- In Fiscal Year (FY) 2014, oil and gas development activities in Utah resulted in \$6.9 billion of total economic output. The State of Utah received more than \$170 million from royalties, rentals and bonus bid payments for federal minerals, including oil and gas.
- As of January 2015, there were 3,383 authorized oil and gas leases covering nearly 3.5 million acres in Utah and 1,166 leases on 992,380 acres were held by production.
- In FY 2014, BLM-Utah conducted four oil and gas lease sales:
  - Acres Nominated – 2,062,495
  - Acres Offered for Sale - 185,892
  - Acres Receiving Bids - 88,931
  - Total Receipts - \$6,362,824

**Oil and Gas Permitting Time**

- In FY 2014, it took an average of 180 days to process an Application for Permit to Drill (APD) on federal lands, and 160 days to process an APD on Indian lands in Utah. Further, the BLM is investing in even more efficiencies through its online APD system—Automated Fluid Mineral Support System v.2 (AFMSS2).
- BLM-Utah processed 1,159 APDs in FY 2014; 1,533 APDs are pending.
- BLM-Utah’s Vernal Pilot Office has the highest volume of APDs of any single office in the BLM and expects to process approximately 1,200 APDs in 2015.

**Final Hydraulic Fracturing Rule**

- On March 20, 2015, the Department of the Interior released final standards to support safe and responsible hydraulic fracturing on public lands. The final regulations seek to:
  - Ensure that wells are properly constructed to protect groundwater
  - Make certain that hydraulic fracturing fluids that flow back to the surface are managed in an environmentally responsible way
  - Provide public disclosure of chemicals and additives used in hydraulic fracturing
  - Improve measures to prevent cross-well contamination, commonly called “frack hits.”
- The BLM estimates that the new rule will cost less than one-fourth of one percent of the cost of drilling a well.

**Venting & Flaring**

- Both the Governmental Accountability Office and the Office of the Inspector General identified the current regulations as deficient for a number of reasons.

- The current regulations, found in the Notice to Lessee and Operators No. 4A, are outdated. They were written in 1979, and the industry and the technology it uses have changed a great deal since then.
- Natural gas that is vented into the atmosphere or burned – or flared – during oil and gas development represents a natural resource that is lost without generating royalties for the public and without being used as a productive fuel source.
- At the time, the GAO estimated the lost royalties from public lands amounted to about \$23 million per year, based on its conclusion that approximately 126 billion cubic feet (Bcf) was vented or flared from all sources on Federal onshore leases annually.
- The purpose of new regulations would be to establish appropriate standards to reduce waste and to promote the conservation of produced oil and gas.
- The Department of the Interior and the BLM are undertaking an outreach to begin a dialogue with tribal and state governments about the regulation of venting and flaring from oil and gas development.

### **Utah Energy Action Development Team**

- On Dec. 14, 2014, the State of Utah and DOI agencies (BLM, Fish and Wildlife Service, and the National Park Service) entered into an MOU to facilitate early coordination for renewables and conventional energy, and major transmission projects.

### **Moab Master Leasing Plan**

- BLM-Utah anticipates the Moab Master Leasing Plan (MLP) Draft Resource Management Plan (RMP) amendment and EIS to publish for public review and comment in May 2015.
- Planning area covers 946,469 acres in west-central Grand County south of Interstate 70 and a portion of northern San Juan County.
- Moab MLP will also address potash leasing in the planning area due to high interest in potash exploration and development as evidenced by the submission of more than 223 potash prospecting permits covering more than 410 acres.

### **Monument Butte Final EIS**

- The BLM-Utah Vernal Field Office expects to release the Final EIS in summer 2015.
- The proposed action covers 119,743 acres and includes up to 5,750 new wells from 3,250 new well pads. The proposed project would disturb 16,129 acres and result in 170 miles of new roads accompanied by a similar amount of new pipelines and infrastructure.
- During construction, the project would employ nearly 500 over a period of 16 years.
- Project could yield an estimated 334.9 million barrels of oil, 540,669 million cubic feet of natural gas, and 10.1 billion barrels of natural gas liquids.

### **Greater Chapita Wells Draft EIS**

- The BLM-Utah Vernal Field Office expects to release the Draft EIS for public review and comment in summer 2015.
- The proposed action, which covers 51 square miles, includes 7,028 wells from up to 700 new and 979 existing drill pads and no new roads or pipelines.

## Coal

- Alton Coal Tract Lease by Application (LBA) – The Draft Supplemental EIS was reviewed by the BLM Washington Office and returned to Utah BLM in early February to revisit the unsuitability determination under 43 CFR 3461.5(o) relative to sage grouse. BLM-Utah has conducted additional review and has determined the area to be unsuitable for coal mining (under criterion 15 based on sage-grouse) however it is anticipated that the ongoing and proposed mitigation will allow the project to move forward. The State of Utah has responded to the determination with a conclusion that the area is suitable. The BLM and State are meeting to further discuss the determination.
- Greens Hollow LBA – The *Federal Register* notice to announce the availability of the Final Supplemental EIS published on Feb. 27, 2015. A lease sale is expected in late summer (2015). This underground mine is located beneath Forest Service land.
- Flat Canyon LBA – the *Federal Register* notice of proposed lease sale is under review in the WO and is expected to publish soon, with the sale being held this summer. This underground mine is located beneath Forest Service land.

## **SUBJECT: PLANNING**

### **Greater Sage-Grouse Planning Effort**

- Since the national planning effort officially began a few years ago, 10 state offices have been working on 15 EISs and 68 land use plan amendments.
  - In 2013, draft EISs were released for public review and comment.
  - Final EISs will be released on or near June 1, 2015.
  - Records of Decision (ROD) will be released by Aug. 1, 2015.
  - One of the 15 EISs—the Lander, Wyo., Resource Management Plan (RMP)—was finalized in June 2014.
- The Utah planning area includes approximately 48 million acres of federal, state, and private lands, which contain approximately 7.2 million acres of Greater Sage-Grouse-occupied habitat.
  - Approximately 3.3 million acres of this occupied habitat are on BLM- and National Forest System-administered lands.
  - Approximately 4 million acres of federal mineral interest lies in Greater Sage-Grouse habitat.
- BLM-Utah has coordinated with the State of Utah on a number of issues, including the adaptive management approach, habitat objectives, and management of the West Tavaputs plateau area in northeastern Utah.

### **St. George Field Office RMP and Red Cliffs and Beaver Dam Wash NCAs**

- A planning effort is underway for the Red Cliffs (45,000 acres) and Beaver Dam Wash (63,500 acres) National Conservation Areas, as well as a Resource Management Plan (RMP) for travel and biological priority areas within the St. George Field Office.
- This St. George RMP planning effort includes a plan amendment that will consider changes to off-highway vehicle area designations (open, closed, and limited) originally approved in the 1999 Resource Management Plan (RMP), as well as nominations for new Areas of Critical Environmental Concern (ACECs).

- A draft Environmental Impact Statement (EIS) will be released for a 90-day public review and comment period in Summer 2015.
- Red Cliffs and Beaver Dam Wash NCAs were established with the passage of the Omnibus Public Land Management Act of 2009.

### **Cedar City RMP**

- The Cedar City Field Office is undergoing an RMP update for 2.1 million acres of public lands in Iron and Beaver Counties. The updated plan will guide management of natural resources, activities and uses on these public lands over the next 15-20 years.
- The new RMP will address issues including air quality, cultural and paleontological resources, fire, watersheds and water quality, wildlife, livestock grazing, and wild horses and burros. As part of the planning process, the BLM will also consider nominations for ACECs and river segments for potential inclusion in the National Wild and Scenic Rivers System.
- A draft EIS will be released for a 90-day public review and comment period in Summer 2015. A final EIS and Record of Decision is anticipated in mid-2016.

### **Grand Staircase-Escalante National Monument Grazing EIS**

- The Grand Staircase-Escalante National Monument (GSENM) is developing a plan amendment and EIS to address livestock grazing decisions on the Monument. The planning area consists of 2.1 million acres of public lands in Kane and Garfield Counties, Utah, and in Coconino County, Arizona.
- GSENM is working closely with the State of Utah, Kane and Garfield Counties, National Park Service and Natural Resources Conservation Service.
- Once final, the plan-level decisions will include identifying which lands will be available for livestock grazing, possible grazing management practices, and guidelines and criteria for future allotment-specific changes needed to address range health.
- A draft EIS will be released for a 90-day public review and comment period in Fall 2015. Public information open houses will be held during the comment period. A final EIS is anticipated in Fall 2016.

## **SUBJECT: WILD HORSES AND BURROS**

### **Wild Horse and Burro Fertility Control**

- Onaqui Mountain Wild Horse Fertility Control Plan – The Salt Lake Field Office is preparing an Environmental Assessment (EA) for the Onaqui Mountain Wild Horse Fertility Control Plan.
- The field office proposes applying fertility control to mares in the Onaqui Herd Management Area (HMA) beginning in 2015 and through 2020. The proposed action would help maintain a population of 160 adult horses, which is within the appropriate management level of 121 to 210 wild horses.
- The long-term goal is to reduce the need for gathers and removals, without jeopardizing the genetic health of the herd.
- Fertility Treatment Research – The BLM-Utah has been approved for funding to conduct animal movement and fertility treatment research in the Conger and Frisco HMAs.

- The research would use one HMA as a control, utilizing radio collar and tagging to monitor movements; the second HMA would be used to research the utilization of gelding and/or sterilization for population control. Gathers would be conducted in both HMAs prior to research beginning.
- One burro HMA—the Sinbad HMA—is also under consideration as a final candidate for similar burro research.
- Research would be conducted with funding the National Academy of Sciences report that recommends additional research within the BLM Wild Horse and Burro program.
  - This proposed research does not fall under the national RFP seeking research ideas.
  - The proposed research would be conducted using the BLM’s existing partnership with the U.S. Geological Service.

**SUBJECT: FIRE AND INVASIVES ASSESSMENTS TEAM (FIAT)**

- Wildfires, invasive annual grasses, and conifer encroachment were identified as primary threats to greater sage-grouse (sage-grouse) populations and habitat in the U.S. Fish and Wildlife Service’s (Service) 2010 listing determination.
- The FIAT assessments are designed to develop collaborative implementation plans that address those threats. The FIAT effort focuses on two proactive strategies—Fuels Management and Habitat Restoration/Recovery—and two reactive strategies—Fire Operations and Post-Fire Rehabilitation.
- BLM-Utah participated on two regional FIAT teams—the Northern Great Basin and the Southern Great Basin.
- In the Great Basin, the BLM will be addressing threats to sage-grouse by strategically funding projects identified using the FIAT assessments.
- BLM-Utah and its partners are positioned to play a key role in the conservation, maintenance, and restoration of sagebrush landscapes within sage-grouse habitat. BLM-Utah’s Fuels Management Program has identified within NFPORS \$7,275,850 in additional funding needs targeted towards sage-grouse with Resources identifying another \$3,676,761 for FY2015 alone.
- BLM-Utah has established collaborative relationships through the Utah Partnership for Conservation and Development (UPCD) which provides the ability to leverage additional funds and treat across all ownerships and landscapes. The UPCD and the Watershed Restoration Initiative (WRI) also represent a framework and model to assist other states in meeting the Secretarial Order 3336 Implementation Plan.

**Date:** Wednesday, May 27, 2015 11:00:37 AM

---

Good Morning Steven and Patrick:

I was wondering if you had any updates on the MOUs that are being negotiated with the states or tribes on the HF rule that you could provide us – including either draft MOUs, or completed MOUs (if they exist)... I hope both of you had a relaxing Memorial Day weekend.

As an aside, Steven, it was nice to be able to speak with you on a more relaxed level last week at the IOGCC conference. I was certainly happy that I didn't have to withstand the barrage of questions that you faced!

Thanks!

 Energy and environment headlines for the afternoon of Thursday, May 28, 2015

## **Both GOP and enviros split on sage-grouse plans**

**By Kevin Rogers**

The federal government's proposal for protecting the greater sage-grouse revealed splits among Republicans and among environmentalists as it drew praise --

Freedom

and criticism -- from across the political spectrum.

Laying out new restrictions on energy development near critical habitats, the Interior Department and Forest Service aimed to stave off an Endangered Species Act listing for the bird, unveiling on Thursday landscape plans covering populations across ten western states.

The plans drew fire from western Republicans in Congress and the oil and gas industry, who said they would extend federal land control and threaten state economies without properly protecting the bird. However, they got a strong endorsement from Wyoming's Republican governor.

Environmentalists were also split, with some saying the moves did not go far enough.

Announcing the plans in Cheyenne, Wyoming, Interior Secretary Sally Jewell said they were "a targeted approach" to prioritize the birds' most crucial habitats. The plans aim to limit surface disruption from development, better maintain existing habitats, and reduce the risk of rangeland fire.

"Today the federal government is stepping up and doing its part," Jewell said at a news conference. "We have strong conservation measures that can also allow for sustainable development and traditional uses of the land. And they respect the existing rights that exist on the land."

The Bureau of Land Management and Forest Service plans will be finalized in late summer following a 60-day Governor's Consistency Review period -- which has already started -- and a 30-day protest period.

The Fish and Wildlife Service is required to issue a listing decision for the bird by September 30, and the federal actions taken, as well as existing state and private efforts, will play a key role in determining which way the decision goes.

The plans Jewell announced would limit surface disturbances from roads, energy production and buildings, in part by favoring oil and gas leases outside of the priority habitat; and set variable buffer zones limiting energy activity near leks, the sites where sage-grouse mate.

The agencies estimated that 90 percent of lands with medium to high potential for oil and gas production would still be available, and more resources could be unlocked by less

disruptive drilling techniques. They also confirmed that existing rights in priority zones would be respected.

The plans also would look to keep renewable energy projects and transmission lines outside of priority habitats and require mitigation where those lines are necessary. They would also have the agencies take sage-grouse populations into account when approving new or expanded coal mines.

The Independent Petroleum Association of America argued that the plans were “wanting” in both conservation and development.

“While we support conservation efforts to protect the greater sage-grouse, at first glance, these plans, with their significant new limitations on land use, appear to fly in the face of the meaningful conservation efforts already underway within the range states to protect this important species,” Senior Vice President of Government Relations and Political Affairs Dan Naatz said in a statement.

Jewell hit back at those arguments, saying that most energy development areas would be left unaffected by the plans.

“The vast majority of the conventional and renewable energy resources that exist in these landscapes that we have in the plan will be available,” she said. “Let's focus on the 90 percent that are available, not the 10 percent that are more complicated by their location in the habitat.”

Wyoming Gov. Matt Mead, one of the leaders of the federal-state Sage-Grouse Task Force, said the plan found a “sweet spot” and was product of strong collaboration between stakeholders and government. He defended it as a necessary step to protect the land.

“This is not just about the sage-grouse, it's about the habitat. It's about the West,” he said. “There is no future for our economy if we don't take care of the sage-grouse. That's a fact. Some like it, some don't like it, but that's a fact. We had to figure out a path forward.”

But House Natural Resources Chairman Rep. Rob Bishop, R-Utah, who has led an effort against the listing of the species, said the plans put federal land control ahead of protecting the bird.

“This is just flat out wrong. If the Administration really cares about the bird they will adopt the state plans as they originally said they would. The state plans work,” he said in a statement. “This proposal is only about controlling land, not saving the bird.”

Sen. Steve Daines, R-Mont., agreed, calling it a “one-size-fits-none” conservation plan that he wasn't convinced would be helpful to the bird. He warned that it would threaten his state's economy.

“We can't protect the greater sage-grouse in a checkerboard-like fashion — after all, the bird can't tell the difference between federal, state and private lands,” he said in a statement.

Senate Minority Leader Harry Reid, D-Nev., however, said the effort would offer a path to keep the bird off the ESL.

“These plans for the protection of the greater sage-grouse, which are the culmination of

years of work by our federal land managers in cooperation with the eleven Western states, are the best chance we have of keeping the bird off the Endangered Species list,” he said in a statement.

Environmental groups were split on the plans, with some saying they represented a strong pledge to protecting the bird and others maintaining that the proposals wouldn't be enough to save the sage-grouse.

“This is a historic commitment to wildlife conservation on public lands,” Eric Holst, senior director of working lands at the Environmental Defense Fund said in a statement. “By requiring mitigation on millions of acres of vital sagebrush habitat, these agencies are unlocking the vast untapped conservation potential of America’s working lands.”

But WildEarth Guardians voiced skepticism that the plan would amount to much, given the compromises between governments and stakeholders.

“Up to this point, we’ve seen a lot of horse-trading and political compromises that fall short of adequate grouse protections, and soon we’ll see if the Department of Interior is more interested in cutting deals or implementing scientific standards to solve the problem of sage grouse declines,” Erik Molvar, a wildlife biologist for the group, said in a statement.

## Huge drop in West Virginia coal production forecast

By Jonathan Matisse

CHARLESTON, W.Va. (AP) — West Virginia University researchers predict that state coal production will drop 39 percent compared with the industry's last high point in 2008 — less-than-encouraging news for more than 1,800 coal miners who learned last week they would likely lose their jobs.

Already-struggling southern coalfield counties would bear the brunt of the industry's downturn, with an expected 29 percent production drop in 2035, compared to 2014. The dwindling coal industry has ravaged that region with job losses, and has even necessitated cuts to government services.

The report rattles off a combination of familiar economic, geological and regulatory challenges: weak export demand; less use of coal for electricity amid competition from natural gas; changes in emissions rules for power plants; and worsening geological conditions that make extracting southern West Virginia coal less productive.

The dismal projections don't even account for a federal proposal to stem carbon emissions from coal-fired power plants, part of President Barack Obama's plan to stem global warming.

## Obama says TX, OK storms a reminder to prep for disasters

By Darlene Superville

MIAMI (AP) — President Barack Obama said Thursday the deadly flooding in Texas and Oklahoma should serve as a reminder of the need to make the nation more resilient to the impact of natural disasters, adding that climate change is affecting both the pace and intensity of storms.

Making the first visit of his presidency to the National Hurricane Center in Miami,

Obama said that while the nation is better prepared than ever for the storms of today, "the best scientists in the world are telling us that extreme weather events, like hurricanes, are likely to become more powerful."

"When you combine stronger storms with rising seas, that's a recipe for more devastating floods," he said.

Obama said that while the technology for forecasting storms has improved and there are better ways to disseminate warnings, the nation also must stay focused on "becoming more resilient to the impacts of a changing climate that are having significant effects on both the pace and intensity of some of these storms."

## Why a shrinking US economy last quarter isn't cause for fear

**By Martin Crutsinger**

WASHINGTON (AP) — Another first quarter of the year. Another reversal for the U.S. economy. Another expectation of a rebound to come.

On Friday, the government will likely estimate that the economy shrank in the January-March quarter for a second straight year, depressed by brutal weather, a reeling energy sector and an export slump caused by a higher-valued dollar.

Yet few will see any cause for panic.

Steady job gains are widely expected to propel modestly healthy growth for the rest of 2015. A harsh winter is gone. So is a labor dispute that slowed trade at West Coast ports. Home sales and construction are rebounding. Business investment is picking up.

Many economists also suspect that the government's calculations have tended to underestimate growth in the first quarter of each year.

## Oil globs close Los Angeles-area beaches to swimming

**By Christopher Weber**

MANHATTAN BEACH, Calif. (AP) — Popular beaches along nearly 7 miles of Los Angeles-area coastline were off-limits to surfing and swimming Thursday as scientists looked for the source of globs of tar that washed ashore.

The sand and surf on south Santa Monica Bay appeared virtually free of oil after an overnight cleanup, but officials weren't sure if more tar would show up. They planned to assess during low tide at midday.

U.S. Coast Guard and state officials said samples of tar and water would be analyzed to identify where it originated, but it could take days to get the results. Nothing has

been ruled out, including last week's coastal oil spill that created a 10-square-mile slick about 100 miles to the northwest off the Santa Barbara County coast.

There is also a refinery and offshore oil tanker terminal nearby, but the Coast Guard did not find a sheen from a spill after the tar started to accumulate Wednesday.

## **Alpha ordered to pay ex-Massey CEO's legal fees**

**By The Associated Press**

CHARLESTON, W.Va. (AP) — A federal judge has ordered Alpha Natural Resources to pay former Massey Energy CEO Don Blankenship's legal fees stemming from a criminal investigation and upcoming trial.

In a ruling released Thursday in Delaware Chancery Court, the judge cited the terms of Massey's charter and the company's merger agreement with Alpha.

Blankenship is charged with conspiring to violate safety standards at the Upper Big Branch mine in West Virginia, where an explosion killed 29 men in April 2010. Blankenship announced his retirement eight months later, and Alpha bought Massey for \$7.1 billion in 2011.

## **Rebates drive grass removal frenzy during California drought**

**By Amy Taxin**

LOS ANGELES (AP) — There's a torrent of Californians taking advantage of rebates for ripping out water-guzzling lawns during the drought, and that's providing a big boost to landscapers.

In Southern California in particular, things are poised to get even better for an industry that was battered by the recession and slow to recover. This week, the board of the Metropolitan Water District of Southern California voted to replenish its turf removal and other water conservation programs with \$350 million to meet booming demand.

In communities across the state, homeowners are swapping out traditional lawns for drought-tolerant plants and shrubs, changing the look of many yards and the business

outlook for landscaping and nurseries.

"Where rebates exist, interest is high," said Sandra Giarde, executive director of the 2,000-member California Landscape Contractors Association.

## Where They Stand: George Pataki on issues of 2016 campaign

By George M. Walsh

ALBANY, N.Y. (AP) — Former New York Gov. George Pataki has entered the contest for the Republican presidential nomination in 2016. Here's a look at where the three-term governor stands on various issues that will be debated in the GOP primaries:

---

### CLIMATE CHANGE

As governor, Pataki built a strong record on the environment. He promoted programs that conserved farmland and purchased large tracts of former timberlands to be set aside for recreation. He ordered New York power plants to cut emissions that cause acid rain and smog and backed the Regional Greenhouse Gas Initiative, which capped carbon emissions in a 10-state region. Pataki says now that he believes private and market-based initiatives are the best way to attack climate change and he is against new federal limits. "I think it's wrong to ignore environmental and conservation issues, I think it's an important part of the federal government's role," Pataki said. "But I think it's even worse if the federal government uses that as an excuse to raise revenue, shut down businesses, cut off innovation and pick winners and losers."

---

### BUDGET AND ENTITLEMENTS

Less government spending and limiting government power have been consistent themes in his appearances and on the website of his super PAC, We the People, Not Washington. He has been campaigning against President Barack Obama's health care law for several years, arguing it is government overreach into what should be a private sector market. Pataki also favors overhauling the federal tax system by eliminating most deductions and reducing tax rates. "My advice would be to start all over," Pataki said in Iowa. "It would put lobbyists out of business and believe me, I think that would be a very good thing for America."

---

### FOREIGN POLICY

Pataki doesn't have a foreign policy background and has been out of government for more than eight years. But he has invoked the 9/11 attacks to call for a limited commitment of U.S. ground forces to combat the Islamic State group, saying the U.S.

is more vulnerable to a domestic attack than at any time since then. He has said any deployment should be confined to destroying the threat, then pulling out. He says a U.S. force should have been left in Iraq when the U.S. ended its combat operations there. Pataki opposes the decision to normalize relations with Cuba.

## China's Hanergy under investigation by Hong Kong regulator

By Kelvin Chan

HONG KONG (AP) — Hong Kong regulators said Thursday they're investigating a leading Chinese solar panel maker owned by billionaire Li Hejun after its shares took a sudden and unexplained plunge.

The Securities and Futures Commission normally does not announce its investigations but released a statement after Li said there was no investigation in a video interview posted online Wednesday by Chinese state media.

"A formal investigation into the affairs of Hanergy Thin Film Power Group Ltd. has been active and is continuing," the commission said in a brief statement. The market watchdog said it was disclosing the investigation "given the public interest following reports denying such measures have been taken."

Shares in Hanergy Thin Film, which is a unit of Beijing-based Hanergy Holding Group, had more than doubled since the start of the year, making Li one of China's richest people with a fortune estimated at \$20 billion. On May 20 they plunged by half in the first hour of trading before being suspended and remain frozen.

## Groups praise, pan sweeping BLM sage grouse plans

Phil Taylor, E&E reporter  
Published: Thursday, May 28, 2015

Conservationists and state officials today praised the Obama administration's release of final plans to bolster protections for greater sage grouse across tens of millions of federal acres of the West, while Republicans and industry groups warned of crippling new restrictions on drilling, mining and grazing.

The 14 final environmental impact statements released today represent what is likely the largest landscape-scale conservation effort ever undertaken at the Bureau of Land Management, which, as the nation's biggest landlord, manages the majority of the grouse's remaining habitat in 10 Western states.

The plans will be a linchpin factor in September, when Fish and Wildlife Service is legally required to decide whether grouse need protection under the Endangered Species Act.

FWS will consider the BLM and Forest Service plans alongside executive orders signed by a handful of Western governors and an estimated \$750 million that is being spent by the Natural Resources Conservation Service and nonfederal partners to improve grouse habitat on private lands, which comprise roughly 30 percent of the bird's habitat.

"Today, the federal government is stepping up and doing its part," Interior Secretary Sally Jewell said at a rollout event in Cheyenne, Wyo.

Jewell said it is "our goal, our hope" that the federal land-use plans will contain enough regulatory substance to persuade Fish and Wildlife not to list the bird. "This will be exclusively their decision," she said.

Oil and gas companies, miners, ranchers, sportsmen and conservationists all have a lot to gain or lose from the plans. But it will likely take days for stakeholders to digest the scope of protections proposed in the final EISs, which are available [here](#).

Early reactions from conservationists, sportsmen, Democratic lawmakers and some red state officials were positive, though some conservationists warned the plans make too many concessions to industry and fall short of protections recommended by biologists.

Wyoming Gov. Matt Mead (R), who accompanied Jewell at today's event and whose state contains an estimated 40 percent of the nation's remaining sage grouse, said proactive steps are needed to preclude a federal listing, which many believe would throttle the Cowboy State's mineral-dependent economy.

"There is no future for our economy if we don't take care of the sage grouse," said Mead, who praised Jewell for recognizing "this notion that we have to find the right balance."

The collaboration among state and federal officials to conserve grouse in his state could offer a "skeleton

key" to resolving future ESA conflicts, he said.

In Wyoming, BLM and Forest Service final plans largely adopt Mead's sage grouse conservation strategy.

One sweeping **EIS** covers 38.9 million acres, encompassing federal, state and private lands in 17 counties, six BLM field offices and three national forests.

Like the other federal plans, the "9-plan" blueprint in Wyoming designates lands within the planning area as sage grouse strongholds, "priority" habitat and "general" habitat.

In the plan's 5 million acres of priority habitat, protections would largely mirror Wyoming's core area strategy, with a cap on surface disturbance of 5 percent, an average of one energy and/or mining facility per square mile, and a 0.6-mile buffer for occupied sage grouse breeding grounds, known as leks.

Some scientists and conservationists argue those restrictions are too lax to prevent further population declines, but top Fish and Wildlife officials have endorsed them.

About 250,000 acres out of a total of 1,196,000 acres of sage grouse strongholds would be recommended for withdrawal from the General Mining Act of 1872, with much of the rest considered for future recommended withdrawals. For mitigation, BLM would work with Mead's sage grouse advisory team to ensure human activities result in a net conservation gain for grouse habitat.

A **map** and **executive summary** of the Wyoming plan provide a glimpse into the types of protections BLM and the Forest Service are contemplating West-wide.

## **Western officials largely pleased**

Mead said his team will be reviewing the plan closely during the upcoming 60-day governors' consistency review but that "it is appropriate to celebrate today."

Similar reviews will be performed by governors in the nine other Western states where BLM and the Forest Service rolled out plans.

Colorado Gov. John Hickenlooper (D) who in early 2014 blasted BLM's draft land-use plan for northwest Colorado as overly restrictive on oil and gas -- calling federal plans dismissive of Colorado's incentive-based conservation model -- today said he's "cautiously optimistic about the approach taken by the BLM."

"We've had a strong partnership with the Interior Department," he said. "And while we still have some difficulties with the BLM's approach, we remain committed to keep working through those issues."

The Fish and Wildlife Service, whose assessment of the land-use plans will be paramount, said it is reserving judgment until it has more time to review them.

"We're pleased that BLM and USFS recognize that strong, effective federal land management plans are vital for successful greater sage-grouse conservation and essential for the service's evaluation of whether the species still warrants federal protection," said Noreen Walsh, the service's Mountain-Prairie regional director.

Current and former Western state wildlife officials said the administration has heeded their call in 2011 to beef up federal protections.

Stronger protections on federal lands that constitute the bulk of grouse habitat could allow more development on state and private lands, while avoiding a federal listing, Obama administration officials have said.

"I have never seen an effort this large in scope, accomplished in such a short period of time by federal agencies, to address the needs of any animal affected by ESA in my 38 years as a state wildlife professional," said Virgil Moore, director of Idaho's Fish and Game Department. "The state, private and federal collaborative are to be congratulated for making this possible and in getting the EISs out for final

public review."

Ken Mayer, former head of Nevada's Department of Wildlife, said that Western wildlife officials met with Obama administration officials in Washington, D.C., in summer 2011 to "light a fire." The state-federal effort to steer grouse and its sage-steppe habitat back from demise "is one of the most significant natural resource management challenges of our generation," he said.

## **Some enviros skeptical**

Conservation groups offered mostly positive reviews.

Steve Williams, president of the Wildlife Management Institute who was FWS director during the George W. Bush administration, said the revised plans "appear to have improved the conservation measures and assurances needed to prevent the listing."

"Ultimately, the decision to list the range-wide population will end up in a federal court, and the BLM has taken a positive step forward by producing plans that hopefully can be defensible to a judge," he said.

Eric Holst, senior director of working lands at the Environmental Defense Fund, praised the plans for requiring off-site mitigation for unavoidable impacts to sensitive habitat and for formally recognizing habitat exchanges that EDF is helping establish as a marketplace for meeting those mitigation requirements.

The exchanges, which are being developed in Nevada, Colorado, Wyoming and Montana, would allow energy companies that harm grouse habitat to purchase credits from landowners, who would improve or restore their lands in ways that benefit the grouse.

"By requiring mitigation on millions of acres of vital sagebrush habitat, these agencies are unlocking the vast untapped conservation potential of America's working lands," Holst said. "In places like Nevada where habitat exchanges are the preferred mitigation option, we will soon see mitigation dollars driving faster, stronger conservation than ever before."

But Defenders of Wildlife, which has warned that BLM's draft plans in 2013 and 2014 were "wholly inadequate to conserve the species," is reserving judgment. The group this week said the land-use plans must designate more priority habitat as areas of critical environmental concern.

"The inadequacy of the draft plans coupled with new demographic information is a blunt reminder that the final plans must include strong, science-based conservation measures to protect the species," said Defenders President Jamie Rappaport Clark. "Ultimately, if the final plans do not adequately protect sage grouse, then the process cannot be called a success."

Erik Molvar, a biologist with WildEarth Guardians, whose settlement with Fish and Wildlife in 2011 helped set the September listing deadline in motion, said he fears the final plans will be too accommodating to land users who harm grouse.

"Up to this point, we've seen a lot of horse-trading and political compromises that fall short of adequate grouse protections, and soon we'll see if the Department of Interior is more interested in cutting deals or implementing scientific standards to solve the problem of sage grouse declines," he said.

## **Lawmakers react**

The reactions from members of Congress fell largely along partisan lines.

Republican leaders have criticized the BLM and Forest Service efforts as a snub to state plans. The federal plans may see congressional oversight hearings over the summer.

"This is just flat-out wrong," said House Natural Resources Chairman Rob Bishop (R-Utah). "If the administration really cares about the bird, they will adopt the state plans as they originally said they

would. The state plans work. This proposal is only about controlling land, not saving the bird."

Sen. Cory Gardner (R-Colo.), who, like Bishop, has authored legislation that would roll back the BLM and Forest Service plans, said the final plans "would significantly hamper access to public lands for sportsmen and other recreational users."

Western oil and gas groups will be eyeing the plans closely for whether they impede access to federal minerals. Groups including the Western Energy Alliance and Independent Petroleum Association of America are already battling BLM's newly finalized hydraulic fracturing rule in court. They are expected to also fight today's land-use plans.

"At first glance, these plans, with their significant new limitations on land use, appear to fly in the face of the meaningful conservation efforts already underway within the range states to protect this important species," said IPAA's Dan Naatz. "Interior must find a balance between thoughtful conservation and critical energy and economic development, but these plans appear to be wanting on both fronts."

As BLM signs records of decision for the plans in late summer, the battle between development and conservation interests will intensify in Congress and could spill over to a federal courtroom.

"Western communities must now remain vigilant to ensure that Congress does not block this path to recovery and dismantle the years of collaborative work that have been done to conserve one of America's most rugged and iconic landscapes," said David Hayes, a former Interior deputy secretary who is a senior fellow at the Center for American Progress.

Democrats, who will be on the front lines in that defense, today backed the Obama administration's land-use plans.

Senate Minority Leader Harry Reid (D-Nev.) called the plans "the best chance we have of keeping the bird off the endangered species list."

Rep. Raúl Grijalva (D-Ariz.), ranking member of the House Natural Resources Committee, said the collaborative effort that yielded the plans "proves that a strong Endangered Species Act is a catalyst for positive change that protects species and landscapes while promoting sustainable economic development."

---

Good afternoon. Please see the attached "Letter to Operators" inviting industry representatives to a BLM Workshop on the new Hydraulic Fracturing rule. This new rule goes into effect on 6/24/15, so this workshop will discuss the new rule and how it will be implemented, as well as address questions from industry.

You are all welcome to attend as well. Please let me know if you plan to attend.  
Thanks.

June 1, 2015

Dear Operator:

The Bureau of Land Management is continuing its efforts to host workshops to help industry deal with the challenges of operating on Federal and Indian lands in North Dakota. We are preparing to offer the next in the series titled, "Outreach - Final Hydraulic Fracturing Rule." The purpose of the workshop will be to discuss the hydraulic fracturing rule which was published as final on March 20, 2015, and will be implemented effective June 24, 2015.

Workshop Specifics:

Date: Monday, June 22, 2015  
Time: 9 AM - 12 PM (Central Daylight Time)  
Location: ND Heritage Center  
Russell Reid Auditorium  
612 East Boulevard Ave.  
Bismarck, North Dakota 58505

In an effort to plan for the workshop and to ensure we have an adequate supply of handouts, please **RSVP by Friday, June 12, 2015** to our Facilities Services Assistant, Kacy Muilenburg, at [kmuienburg@blm.gov](mailto:kmuienburg@blm.gov). Be sure to indicate the number of participants your company plans to have attending to the workshop. For those that cannot travel to Bismarck, but would like to listen, please use the BLM-MT EMDD Conference Bridge at 866-893-3445, Passcode 4585371.

I look forward to your participation at the Hydraulic Fracturing Workshop. If you have any questions regarding the agenda or the topics to be covered, please feel free to contact Allen Olilla, Acting Assistant Field Manager at 701-227-7735.

Sincerely,

Loren Wickstrom  
Acting Field Manager

**Cramer Statement on EPA Draft Assessment on the  
Potential Impacts to Drinking Water Resources from  
Hydraulic Fracturing Activities**

**WASHINGTON, D.C.** – Today Congressman Kevin Cramer released the following statement after the Environmental Protection Agency (EPA) released its Draft Assessment on the Potential Impacts to Drinking Water Resources from Hydraulic Fracturing Activities concluding they “have not led to widespread, systemic impacts on drinking water resources.”

"I am thankful the EPA's own scientists and researchers have confirmed what the people of North Dakota have known all along; hydraulic fracturing is safe and not a threat to safe drinking water. The EPA acknowledges states play a primary role in regulating most natural gas and oil development and they have safely managed and regulated hydraulic fracturing for decades. The BLM should take this assessment into account and withdraw their hydraulic fracturing rule which is duplicative to state regulations the EPA has confirmed protect our groundwater," said Cramer.

Prior to his election to the United States House of Representatives, Cramer served on the North Dakota Public Service Commission. During his tenure, beginning in 2003, Cramer dealt with all aspects of the Commission's portfolio, including pipeline and electrical transmission siting, regulation of North Dakota's three investor owned utilities, and management of North Dakota's Surface Mine Coal Reclamation Act State primacy program.

The EPA states its' draft assessment benefited from extensive stakeholder engagement conducted across the country with states, tribes, industry, non-governmental organizations, the scientific community, and the public to ensure the draft assessment reflects current practices in hydraulic fracturing and utilizes all data and information available to the agency.

## **[HOUSE PASSES H.R. 1168 - NATIVE AMERICAN CHILDREN'S SAFETY ACT](#)**

*[Cramer, Hoeven Legislation Provides Uniform Foster Care Background Checks](#)*

**WASHINGTON, D.C.** – The U.S. House of Representatives approved [H.R. 1168](#), the Native American Children's Safety Act. The legislation sponsored by Congressman Cramer requires criminal background checks be performed on foster parents and foster care employees before placing Native American children in foster care. Additionally, the bill requires background checks be performed on all adults who reside in the foster home. U.S. Senator John Hoeven has introduced companion legislation in the Senate. The bill, S. 184, was approved by the Senate Indian Affairs Committee on February 4, 2015 and was approved by the U.S. Senate today.

"The support of the entire U.S. House of Representatives underscores our commitment to ensuring Native American children are placed into safe and secure foster care situations. Native American tribes have a complex and uneven series of procedures and guidelines for foster care and this bill addresses this problem with the creation of a national standard which unifies existing national requirements for non-tribal foster care placements, ensuring tribal children receive the same robust protections afforded non-tribal children," said Cramer. "I would like to thank the National Indian Child Welfare Association (NICWA), the National Congress of American Indians, the BIA, and HHS for their insights and suggestions on this bill. Their assistance proved invaluable in refining and improving this legislation as well as ensuring tribes are provided adequate flexibility as they transition to these new standards," continued Cramer.

"Native American children living on reservations should have all of the same protections when placed in foster care that children living off the reservation have," Senator Hoeven said. "The Native American Children's Safety Act requires background checks for all adults living in a foster home, helping to ensure that children placed there are secure at an already difficult time in their lives."

*Click on Image to view the House Floor Debate on HR 1168*

Congressman Cramer's leadership on this issue was recognized in a 2014 hearing on Native American Foster Care issues. During the hearing, Principal Deputy Assistant Secretary for Indian Affairs at the U.S. Department of the Interior, Larry Robertos, as well as Congressman Tony Cárdenas (D-CA), acknowledged Cramer's efforts to protect native children, including a previous hearing held to examine child welfare on Spirit Lake Reservation.

"Congressman Cramer, I want to thank you for your leadership on this issue. Safety of native children is of utmost priority for the department and we've talked about this before in the past. We strongly support the principles of your legislation," said Roberts during the hearing.

On June 24, 2014, Congressman Cramer lead a Congressional hearing into the Foster Care issues at the Spirit Lake Reservation. You can view the committee hearing in its entirety below.

---

**CRAMER: HOUSE VOTES TO ROLL BACK “WATERS OF THE U.S.” RULE**

*Click on Image to View Congressman Cramer Discussing the Waters of the United States Issue*

**WASHINGTON, D.C.** – Today Congressman Kevin Cramer joined a majority of the U.S. House of Representatives to pass [H.R. 1732](#), the Regulatory Integrity Protection Act of 2015. This legislation gives the Environmental Protection Agency (EPA) and the Army Corps of Engineers 30 days to withdraw the current proposed rule that defines “Waters of the United States” (WOTUS) under the Clean Water Act (CWA), and charges them with developing a new proposed rule.

"Today the U.S. House of Representatives made a clear statement against this administration's brazen overregulation and attempt to have jurisdiction over every puddle on every farm in every state. Landowners as well as state and local officials are looking for clarity on WOTUS and this bill directs the EPA work with landowners as well as state and local jurisdictions to develop regulations which protect the environment while preserving private property rights and respecting states' rights. I urge the U.S. Senate to quickly take up this legislation and send it to the President for his signature," Cramer added.

---

**CRAMER SUPPORTS REPEAL OF COUNTRY OF ORIGIN LABELING (COOL) LEGISLATION**

**WASHINGTON, D.C.** – Congressman Kevin Cramer announced his support of U. S House of

Representatives Agriculture Committee Chairman Mike Conaway's, legislation to repeal the Country of Origin Labeling or COOL law. The legislation was introduced after the World Trade Organization (WTO) ruled for the fourth time the COOL law violates international trade agreements.

"I realize some think we should try to negotiate a settlement with Canada and Mexico, but that time has passed. COOL advocates have exhausted all appeals and lost. It is time to repeal COOL and move forward with our North American trading partners rather than against them. We can take advantage of our joint reputation and create a new brand for a world market or face certain retaliation, a scenario where neither our producers or consumers win. The USDA study recently released as an obligation of last year's farm bill clearly demonstrates COOL is an idea that really never resonated with consumers nor produced the economic benefits it promised. Last week, I told Chairman Conaway I will support his bill to repeal COOL when it comes to the floor in June."

A copy of the USDA COOL study can be found by [clicking here](#).

**CRAMER: HOUSE VOTES TO ROLL BACK “WATERS OF THE U.S.” RULE**

*Click on Image to View Congressman Cramer Discussing the Waters of the United States Issue*

**WASHINGTON, D.C.** – Today Congressman Kevin Cramer joined a majority of the U.S. House of Representatives to pass [H.R. 1732](#), the Regulatory Integrity Protection Act of 2015. This legislation gives the Environmental Protection Agency (EPA) and the Army Corps of Engineers 30 days to withdraw the current proposed rule that defines “Waters of the United States” (WOTUS) under the Clean Water Act (CWA), and charges them with developing a new proposed rule.

"Today the U.S. House of Representatives made a clear statement against this administration's brazen overregulation and attempt to have jurisdiction over every puddle on every farm in every state. Landowners as well as state and local officials are looking for clarity on WOTUS and this bill directs the EPA work with landowners as well as state and local jurisdictions to develop regulations which protect the environment while preserving private property rights and respecting states' rights. I urge the U.S. Senate to quickly take up this legislation and send it to the President for his signature," Cramer added.

---

**CRAMER SUPPORTS REPEAL OF COUNTRY OF ORIGIN LABELING (COOL) LEGISLATION**

**WASHINGTON, D.C.** – Congressman Kevin Cramer announced his support of U. S House of

Representatives Agriculture Committee Chairman Mike Conaway's, legislation to repeal the Country of Origin Labeling or COOL law. The legislation was introduced after the World Trade Organization (WTO) ruled for the fourth time the COOL law violates international trade agreements.

"I realize some think we should try to negotiate a settlement with Canada and Mexico, but that time has passed. COOL advocates have exhausted all appeals and lost. It is time to repeal COOL and move forward with our North American trading partners rather than against them. We can take advantage of our joint reputation and create a new brand for a world market or face certain retaliation, a scenario where neither our producers or consumers win. The USDA study recently released as an obligation of last year's farm bill clearly demonstrates COOL is an idea that really never resonated with consumers nor produced the economic benefits it promised. Last week, I told Chairman Conaway I will support his bill to repeal COOL when it comes to the floor in June."

**Cramer Statement on EPA Draft Assessment on the  
Potential Impacts to Drinking Water Resources from  
Hydraulic Fracturing Activities**

**WASHINGTON, D.C.** – Today Congressman Kevin Cramer released the following statement after the Environmental Protection Agency (EPA) released its Draft Assessment on the Potential Impacts to Drinking Water Resources from Hydraulic Fracturing Activities concluding they “have not led to widespread, systemic impacts on drinking water resources.”

"I am thankful the EPA's own scientists and researchers have confirmed what the people of North Dakota have known all along; hydraulic fracturing is safe and not a threat to safe drinking water. The EPA acknowledges states play a primary role in regulating most natural gas and oil development and they have safely managed and regulated hydraulic fracturing for decades. The BLM should take this assessment into account and withdraw their hydraulic fracturing rule which is duplicative to state regulations the EPA has confirmed protect our groundwater," said Cramer.

Prior to his election to the United States House of Representatives, Cramer served on the North Dakota Public Service Commission. During his tenure, beginning in 2003, Cramer dealt with all aspects of the Commission's portfolio, including pipeline and electrical transmission siting, regulation of North Dakota's three investor owned utilities, and management of North Dakota's Surface Mine Coal Reclamation Act State primacy program.

The EPA states its' draft assessment benefited from extensive stakeholder engagement conducted across the country with states, tribes, industry, non-governmental organizations, the scientific community, and the public to ensure the draft assessment reflects current practices in hydraulic fracturing and utilizes all data and information available to the agency.

For a copy of the study, visit [www.epa.gov/hfstudy](http://www.epa.gov/hfstudy).

## **[HOUSE PASSES H.R. 1168 - NATIVE AMERICAN CHILDREN'S SAFETY ACT](#)**

*[Cramer, Hoeven Legislation Provides Uniform Foster Care Background Checks](#)*

**WASHINGTON, D.C.** – The U.S. House of Representatives approved [H.R. 1168](#), the Native American Children's Safety Act. The legislation sponsored by Congressman Cramer requires criminal background checks be performed on foster parents and foster care employees before placing Native American children in foster care. Additionally, the bill requires background checks be performed on all adults who reside in the foster home. U.S. Senator John Hoeven has introduced companion legislation in the Senate. The bill, S. 184, was approved by the Senate Indian Affairs Committee on February 4, 2015 and was approved by the U.S. Senate today.

"The support of the entire U.S. House of Representatives underscores our commitment to ensuring Native American children are placed into safe and secure foster care situations. Native American tribes have a complex and uneven series of procedures and guidelines for foster care and this bill addresses this problem with the creation of a national standard which unifies existing national requirements for non-tribal foster care placements, ensuring tribal children receive the same robust protections afforded non-tribal children," said Cramer. "I would like to thank the National Indian Child Welfare Association (NICWA), the National Congress of American Indians, the BIA, and HHS for their insights and suggestions on this bill. Their assistance proved invaluable in refining and improving this legislation as well as ensuring tribes are provided adequate flexibility as they transition to these new standards," continued Cramer.

"Native American children living on reservations should have all of the same protections when placed in foster care that children living off the reservation have," Senator Hoeven said. "The Native American Children's Safety Act requires background checks for all adults living in a foster home, helping to ensure that children placed there are secure at an already difficult time in their lives."

*Click on Image to view the House Floor Debate on HR 1168*

Congressman Cramer's leadership on this issue was recognized in a 2014 hearing on Native American Foster Care issues. During the hearing, Principal Deputy Assistant Secretary for Indian Affairs at the U.S. Department of the Interior, Larry Robertos, as well as Congressman Tony Cárdenas (D-CA), acknowledged Cramer's efforts to protect native children, including a previous hearing held to examine child welfare on Spirit Lake Reservation.

"Congressman Cramer, I want to thank you for your leadership on this issue. Safety of native children is of utmost priority for the department and we've talked about this before in the past. We strongly support the principles of your legislation," said Roberts during the hearing.

On June 24, 2014, Congressman Cramer lead a Congressional hearing into the Foster Care issues at the Spirit Lake Reservation. You can view the committee hearing in its entirety below.

## **Cosponsor the Public Lands Renewable Energy Development Act, H.R. 2663**

**From:** The Honorable Jared Polis  
**Sent By:** [Jennifer.George-Nichol@mail.house.gov](mailto:Jennifer.George-Nichol@mail.house.gov)  
**Bill:** H.R. 2663  
**Date:** 6/15/2015

*Support American energy security by encouraging development of renewable energy resources on public lands!*

**Sponsors and Original Cosponsors so far in the 114th Congress (30):** Paul Gosar\*, Jared Polis\*, Joe Heck\*, Mike Thompson\*, Trent Franks\*, Raul Ruiz\*, Dan Benishek, Rod Blum, Tony Cardenas, Matt Cartwright, Gerald Connolly, Kevin Cramer, Raul Grijalva, Michelle Lujan Grisham, Crescent Hardy, Mike Honda, Jared Huffman, Ann Kirkpatrick, Doug LaMalfa, Alan S. Lowenthal, Ben Lujan, James P. McGovern, Martha McSally, Steve Pearce, Matt Salmon, David Schweikert, Mike Simpson, Kyrsten Sinema, Dina Titus, Ryan Zinke.

Dear Colleague:

Renewable energy sources like wind, solar and geothermal are an integral part of the United States' energy strategy. Our nation's public lands can play a critical role in supporting that

mission, but uncertainty in the permitting process impedes or delays our ability to harness their renewable energy potential. To address this problem, we plan to reintroduce the Public Lands Renewable Energy Development Act (H.R.596 in the 113th Congress).

This legislation streamlines the permitting process for wind, solar and geothermal development on public lands and establishes a revenue sharing mechanism that ensures a fair return for all.

The bill in the 113th Congress had 61 cosponsors and was also supported by 60+ organizations including the Congressional Sportsmen's Foundation, NACo, the Western Governors' Association, as well as numerous county, sportsmen and local conservation groups.

Senators Dean Heller (R-NV), Martin Heinrich (D-NM), Jim Risch (R-ID), and Jon Tester (D-MT) introduced the Senate companion on May 21, 2015 and this bill contains the exact same text.

Public land management agencies need a permitting process tailored to the unique characteristics and impacts of renewable energy projects. This bipartisan bill removes government red tape and develops a streamlined process that will drive investment towards the highest quality renewable sources.

The legislation also establishes a revenue sharing mechanism that ensures a fair return for all. The Public Lands Renewable Energy Development Act distributes certain revenues derived through this Act by returning 25% to the state where development takes place, 25% to the counties of origin, 15% is directed for the purposes of more efficiently processing permit applications and reducing the backlog of renewable energy permits, and 35% is deposited into a fund for sportsmen and conservation purposes, including increasing access and outdoor recreation like hunting and fishing.

Since federal lands are not taxable, state and local governments deserve a share of the revenues from the sales of energy production on lands within their borders. These resources will help local governments deliver critical services and develop much-needed capital improvement projects, such as road maintenance, public safety, and law enforcement.

Our nation's public lands must play a critical role in our country's energy future. We encourage you to become a cosponsor of the Public Lands Renewable Energy Development Act of 2015 and help the United States create jobs, make further progress towards energy independence, and preserve our nation's natural wonders.

Notable changes to the bill since last Congress:

- Removes the outdated pilot program provision. The new permit language is modeled after the oil and gas permitting pilot program established by Sec. 345 of the Energy Policy Act of 2005 and modernized last December by the bipartisan BLM Permit Processing Improvement Act of 2014.
- This Congress' bill includes an important provision that makes clear counties will not be penalized by the revenue sharing provisions in the bill and that such payments to counties are in addition to PILT payments.
- Establishes Variance Areas, additional federal lands identified by the Secretary of Interior that are suitable for responsible renewable energy development.

- Requires interagency coordination as well as coordination with states, tribes and local governments.

To cosponsor this legislation or if you have questions, please contact Jennifer George-Nichol at [Jennifer.George-Nichol@mail.house.gov](mailto:Jennifer.George-Nichol@mail.house.gov).

Sincerely,

Paul A. Gosar, D.D.S

# RENEWABLE ENERGY

## BLM Has Limited Assurance That Wind and Solar Projects Are Adequately Bonded

Statement of Anne-Marie Fennell, Director, Natural  
Resources and Environment

---

Chairman Gohmert, Ranking Member Dingell, and Members of the Subcommittee:

I am pleased to be here today to discuss our June 2015 report on the Bureau of Land Management's (BLM) policies and practices for bonding renewable energy development on federal land, which was released June 23, 2015.<sup>1</sup> The Department of the Interior's (Interior) BLM manages more federal land than any other agency—more than 245 million surface acres—and this land is increasingly being tapped to meet the nation's growing demand for energy. BLM plays a key role in managing energy produced on these lands, including energy from renewable resources. Through the Energy Policy Act of 2005, Congress encouraged the Secretary of the Interior to approve non-hydropower renewable energy projects, including wind and solar projects, with a total capacity to generate at least 10,000 megawatts of electricity on federal lands by 2015. In June 2013, the President proposed an expansion in renewable energy construction projects and set a new goal for Interior to approve a renewable energy capacity of at least 20,000 megawatts of electricity from projects on federal land, which would be enough capacity to power more than 6 million homes by 2020. Currently, about 1 percent of the nation's electricity generated from wind and solar energy comes from resources on federal land.

Projects to produce energy from renewable resources can affect thousands of acres of federal land and involve significant infrastructure. The projects may require developers to alter the land's topography or remove vegetation, physically or through the use of herbicides, and these actions may affect the site itself or have potential downstream or off-site effects. As a condition of BLM's authorization for renewable energy projects, the developer must agree to remove infrastructure elements and return the land to its predeveloped condition when the project terminates, a process called reclamation. To ensure compliance with applicable requirements, including requirements to reclaim project sites, BLM requires operators of wind and solar energy projects on federal lands to obtain bonds. If an operator fails to return the land to its predeveloped state, the bond can be used to cover any reclamation costs the federal government may incur. If the bonds are inadequate to cover reclamation

---

<sup>1</sup>GAO, *Renewable Energy: BLM Has Limited Assurance That Wind and Solar Projects Are Adequately Bonded*, [GAO-15-520](#) (Washington, D.C.: June 5, 2015).

---

costs and the federal government is unable to recover additional costs from the developer, the federal government may have to pay the reclamation costs.

Wind and solar projects on BLM land are subject to federal laws and regulations, as well as BLM policy. The Federal Land Policy and Management Act of 1976 authorizes BLM to issue rights-of-way on federal land for a variety of purposes, including systems for generating, transmitting, and distributing electric energy.<sup>2</sup> Right-of-way holders are required to restore, revegetate, and stabilize the land disturbed by wind and solar projects within a reasonable time, to a condition satisfactory to BLM, as approved by BLM in its Plan of Development.<sup>3</sup> For projects that may have a significant impact on the environment, the act requires applicants to submit a plan of construction, operation, and rehabilitation for the right-of-way that complies with applicable laws and regulations and the agency's stipulations. Federal regulations authorize BLM to require a right-of-way holder to provide a bond to secure the obligations imposed by the right-of-way. According to BLM policy, a bond is required for each wind and solar facility on federal land. BLM may require an increase or decrease in the value of an existing bond at any time during the term of the right-of-way, according to federal regulations.<sup>4</sup>

BLM manages and oversees wind and solar projects in part by maintaining data on each project electronically in two data systems—the Legacy Rehost 2000 System (LR2000) and the Bond and Surety System. LR2000 is BLM's electronic case recordation system that is used to capture information on the agency's land and mineral projects. In the case of wind and solar projects, BLM captures information such as the date the right-of-way was issued, acres authorized, project location, case status (e.g., authorized, expired, or closed), and the actions that have taken place. The system also contains bond information for wind and

---

<sup>2</sup>A right-of-way is an authorization to a qualified individual, business, or government entity to use a specific area of federal land for a specific amount of time for a certain purpose and with specific terms, conditions, and stipulations that, among other things, are intended to protect the environment, federal property and economic interests, and the public interest. Wind and solar projects can be composed of multiple rights-of-way.

<sup>3</sup>A Plan of Development is a detailed construction, operation, rehabilitation, and environmental protection plan.

<sup>4</sup>43 C.F.R. § 2805.12(g) (2014).

---

solar projects, including bond numbers, amounts, and bond actions, such as the date when a bond was filed, accepted, or returned. For wind projects, LR2000 contains the number of authorized turbines and towers. The Bond and Surety System contains bond information, such as the type and amount of bond, as well as actions taken, including the date when a bond was filed, accepted, or returned.<sup>5</sup> BLM staff enter data about wind and solar projects into LR2000, as well as information about bonds into the Bond and Surety System.

My testimony today highlights the key findings of our June 2015 report on BLM's policies and practices for bonding renewable energy development on federal land.<sup>6</sup> Accordingly, this testimony discusses (1) BLM's policies for the bonding of wind and solar projects on federal land; (2) the amount and types of bonds held by BLM for the reclamation of wind and solar projects, and how BLM tracks these bonds; and (3) the extent to which BLM ensures that bonds for wind and solar rights-of-way are adequate to cover reclamation costs.

To address these objectives, we reviewed the agency's policies regarding bonding, the reclamation activities that the bonds are to cover, and the frequency with which bonds are to be reviewed. We also reviewed BLM's Notice of Proposed Rulemaking—issued in September 2014—that would revise and codify the agency's current bonding policies for wind and solar projects. In addition, we obtained wind and solar project data, as of April 15, 2014, from BLM's LR2000 and its Bond and Surety System. We worked with BLM officials to resolve data discrepancies between the two systems and then analyzed the data to identify the bond amounts and types for each right-of-way. To determine how BLM tracks these bonds and understand how LR2000 and the Bond and Surety System are used, the frequency of updates, and the reliability of the data in each system, we interviewed officials in BLM headquarters and all 9 BLM state and 11 field offices with wind or solar energy development projects.

---

<sup>5</sup>A bond is considered filed when BLM receives the bond instrument from the right-of-way holder. A bond is considered accepted once BLM reviews the bond, determines that it has been executed properly, and notifies the right-of-way holder of the bond's acceptance. A bond is considered returned when BLM returns the bond to the right-of-way holder after the holder has successfully completed reclamation, at which time a bond is no longer necessary.

<sup>6</sup>[GAO-15-520](#).

---

To determine the extent to which BLM ensures that bonds for wind and solar rights-of-way are adequate to cover reclamation costs, we conducted an in-depth file review of all wind and solar energy development projects—45 in total—for which BLM held a bond on April 15, 2014, and interviewed BLM officials and other stakeholders. We compared the bond held with what is specified in BLM’s wind and solar policies, as well as reclamation cost estimates in the project files, and we then determined the extent to which documentation of the bond decision is consistent with government standards for internal control.<sup>7</sup> We also interviewed BLM officials to determine compliance with existing BLM policies, the depth and detail of reclamation cost estimates, the extent of documentation supporting bond amounts, and the types of staff involved in determining bond amounts. In addition, we analyzed whether BLM was conducting reviews to ensure that bonds are in place, as is called for in BLM policies. Our June 2015 report includes a detailed explanation of the methods used to conduct our work. The work on which this testimony is based was performed in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

## BLM Has Different Policies for Bonding Wind and Solar Projects, but a Proposed Rule Would Establish Consistent Requirements

As detailed in our report, in 2008, BLM issued a wind energy development policy that includes provisions for bonding wind energy projects on federal land.<sup>8</sup> Among other things, the policy established a minimum bond amount of \$2,000 per meteorological tower for site-specific and project area testing rights-of-way and \$10,000 per wind turbine for wind energy development rights-of-way.<sup>9</sup> BLM is to determine the bond amount for all wind energy development projects during the right-of-way authorization process “on the basis of site-specific and project-specific factors,” but the policy provides no further details on these factors or how to calculate the costs. BLM is to review all bonds for wind development rights-of-way at least once every 5 years to ensure that the bond amount is adequate.<sup>10</sup>

In 2010, BLM issued a solar energy development policy that includes provisions for bonding solar energy projects on federal land that differ from the bonding provisions of the wind policy.<sup>11</sup> Specifically, in contrast to the wind policy, the solar policy sets no minimum bond amount for solar energy development rights-of-way.<sup>12</sup> Rather, the policy states that BLM is to base the bond amount on a reclamation cost estimate provided by the right-of-way applicant that consists of three components: (1) environmental liabilities; (2) decommissioning, removal, and disposal of improvements and facilities; and (3) reclamation, revegetation, restoration, and soil stabilization. A reclamation cost estimate is an

---

<sup>8</sup>See Bureau of Land Management, IM 2009-043, *Wind Energy Development Policy* (Dec. 19, 2008).

<sup>9</sup>A wind site-specific testing right-of-way is an authorization to develop individual meteorological towers and instrumentation facilities with a term that is limited to 3 years. A wind project area right-of-way is an authorization to develop a larger site testing and monitoring area, with a term of 3 years that may be renewed. Both wind site-specific testing and wind project area testing rights-of-way are used to determine whether a site’s wind energy resources meet the potential for energy development. A wind energy development right-of-way is an authorization to develop wind energy facilities generally for a term of 30 years that may be renewed. Facilities include wind turbines, as well as onsite access roads, electrical and distribution facilities, and other support.

<sup>10</sup>A bond adequacy review is a review to determine whether the bond amount is sufficient to cover the cost of reclamation.

<sup>11</sup>IM 2011-003, *Solar Energy Development Policy* (Oct. 7, 2010).

<sup>12</sup>A solar energy development right-of-way is an authorization to develop solar energy facilities for a term not to exceed 30 years that may be renewed.

---

estimate of what it would cost a third party to reclaim the site.<sup>13</sup> The policy states that the applicant is to submit the estimate as part of the decommissioning and site reclamation plan—which defines the reclamation, revegetation, restoration, and soil stabilization requirements for the project area—and the overall Plan of Development. In addition, in contrast to the wind policy, BLM staff are to review annually all bonds for solar development rights-of-way to ensure that the bond amount is adequate to ensure compliance with the right-of-way authorization, including requirements to reclaim the disturbed land.

To help ensure compliance with provisions of the wind and solar bonding policies, BLM has two additional policies that direct BLM state directors to certify annually that all wind and solar energy rights-of-way within their respective states have the required bonds and that the bond data are entered into the Bond and Surety System.<sup>14</sup> This certification does not assess whether the amount of the bond would be sufficient to cover expected reclamation costs. Rather, the annual certification is intended to ensure that a bond has been provided or requested for each wind and solar right-of-way. The certification is to be submitted to BLM headquarters within 30 days after the end of the fiscal year. In addition, field office staff are to enter all bonds received for renewable energy projects into LR2000 and the Bonds and Surety System.<sup>15</sup>

In September 2014, BLM issued a Notice of Proposed Rulemaking related to wind and solar development on federal lands and requested public comment.<sup>16</sup> The proposed rule would revise and codify existing policies and establish consistent requirements for the bonding of solar and wind energy projects. Requirements would differ based on whether

---

<sup>13</sup>BLM's policy for mining operations on public lands, which is a reference tool for BLM's solar energy development policy, states that a bond must be sufficient to allow BLM to contract with a third party to reclaim the operations.

---

projects were located in certain preferred areas—called designated leasing areas.

- **Projects outside designated leasing areas.** The proposed rule would establish a minimum bond amount per turbine of \$20,000 for wind energy development projects—a doubling of the minimum amount currently set in BLM policy—and establish a minimum bond amount of \$10,000 per acre for solar energy development projects. The minimum bond amount for wind energy site-specific or project area testing projects would remain at the amount currently set in BLM policy, that is, \$2,000 per meteorological tower. The proposed rule would require both wind and solar right-of-way applicants to submit a reclamation cost estimate to help BLM to determine the bond amount, and it would outline specific bond components that must be addressed when determining the estimated costs. The proposed rule would not require BLM to conduct periodic reviews to assess whether the bonds remain adequate to cover potential reclamation costs, as is specified in the current wind and solar policies.
- **Projects inside designated leasing areas.** The proposed rule would establish a standard bond amount for wind energy development of \$20,000 per turbine and \$2,000 per meteorological tower, as well as a standard bond amount for solar energy development of \$10,000 per acre. BLM proposed a standard bond amount because these areas would be identified by BLM as areas with lesser and fewer environmental and cultural resource conflicts. According to BLM officials, when a project terminates inside a designated leasing area, the agency would potentially reoffer the site for new wind or solar energy development. As a result, these sites would require less reclamation than if they needed to be fully reclaimed to their predeveloped condition and the bond amount required would be lower. Under the proposed rule, right-of-way holders would not be required to submit a reclamation cost estimate.

A BLM official told us that the agency expects the proposed rule to be finalized by the end of 2015. Once finalized, the official said BLM plans to rescind the current wind and solar policies and replace them with policies that would address, among other things, the bonding process and adequacy reviews not covered in the proposed rule.

## BLM Has About \$100 Million in Bonds for Wind and Solar Projects, but the Systems for Tracking These Bonds Are Not Reliable

We found that BLM has about \$100 million in bonds—primarily in the form of letters of credit and surety bonds—to cover reclamation costs associated with 12 solar rights-of-way and 108 wind rights-of-way on federal land in nine western states, according to our analysis of BLM data. See table 1 for further detail on the values of bond held and table 2 for further detail on the types of bonds held.

**Table 1: Value of Bonds Held by the Bureau of Land Management for Wind and Solar Projects, by Project Type and Amount, as of April 15, 2014**

Project type	Amount	Percentage
Solar development	\$82,615,899	82.2
Wind development	\$17,106,164	17.0
Wind project area testing	\$720,216	0.7
Wind site-specific testing	\$36,000	<0.1
<b>Total</b>	<b>\$100,478,279</b>	<b>99.9</b>

Source: GAO analysis of Bureau of Land Management bonding data. | GAO-15-520

Note: Percentage does not equal 100 because of rounding.

**Table 2: Types of Bonds Held by the Bureau of Land Management for Wind and Solar Projects as of April 15, 2014**

Bond type	Amount	Percentage
Letter of credit	\$49,177,596	48.9
Surety	\$39,361,443	39.2
Personal, including cash	\$10,839,677	10.8
Treasury security	\$900,000	0.9
Guaranteed remittance	\$139,963	0.1
Undetermined <sup>a</sup>	\$47,600	<0.1
Time deposit	\$12,000	<0.1
<b>Total</b>	<b>\$100,478,279</b>	<b>99.9</b>

Source: GAO analysis of Bureau of Land Management bonding data. | GAO-15-520

Notes: Percentage does not equal 100 because of rounding.

<sup>a</sup>“Undetermined” means that BLM could not provide the bond type.

BLM tracks bonds through LR2000 and the Bond and Surety System, but we found that neither system was reliable for this purpose. Specifically, we found multiple instances in each system where information was missing, inaccurate, or had not been updated as follows:

- 
- **Missing information.** BLM's oversight and implementation plan for solar and wind energy policies directs field offices to enter all bonds received for renewable energy projects into LR2000 and the Bond and Surety System,<sup>17</sup> but we found instances where bonds had been entered into LR2000, but not into the Bond and Surety System. We also found instances where staff did not always enter in the remarks section of LR2000 the number of wind turbines or meteorological towers authorized and located on federal land, as directed by BLM's wind policy.
  - **Inaccurate information.** We found instances in LR2000 and the Bond and Surety System where the type of right-of-way entered for the project was incorrect. For example, one wind development project's right-of-way had been incorrectly entered in both systems as a road right-of-way.<sup>18</sup> As a result, the bond had not been included in the annual state bond certification. When BLM reviewed the bond, the agency determined that the bond amount was approximately \$90,000 less than the minimum set by BLM's wind policy.
  - **Information had not been updated.** We found instances where a bond's status or amount had not been updated in one or both systems. In some cases, the data were several years out of date. For example, in one case, LR2000 showed that a bond had been accepted for \$40,000 in 1994, and an additional bond for the same right-of-way had been accepted for \$160,000 in 2011, for a total bond amount of \$200,000. However, BLM had not updated the Bond and Surety System to show that the \$160,000 bond had been accepted, and the system contained no information on the \$40,000 bond.

The LR2000 data standards for BLM's mining program state that all data must be routinely entered within 5 business days of each action taking place.<sup>19</sup> However, there is no such standard for entering wind and solar project data into LR2000.<sup>20</sup> Furthermore, BLM has not issued data

---

<sup>17</sup>IM 2013-034, Attachment 1, *Oversight and Implementation Plan; Solar and Wind Energy Policies*.

<sup>18</sup>A road right-of-way is an authorization to construct a road on a segment of BLM land.

<sup>19</sup>Bureau of Land Management, *H-3809-1, Surface Management* (Sept. 17, 2012).

<sup>20</sup>Bureau of Land Management, *LR2000 Case Recordation Data Standards for the Lands and Realty Program* (revised Apr. 10, 2013).

---

standards for the Bond and Surety System. Because information in these two data systems was missing, inaccurate, or out of date, BLM has limited assurance that either system is reliable for tracking wind and solar bonds to ensure that bonding policies are being followed and that all projects have the required bonds.

BLM has taken some limited steps to improve its bonding data. Specifically, to reduce potential errors or omissions in the bonding data in LR2000 and the Bond and Surety System, BLM made changes to link certain data in the two systems. Starting in late September 2014, when an action code showing that a bond has been filed, accepted, or returned is entered into the Bond and Surety System for a particular right-of-way, the same information is automatically entered into LR2000. However, when a bond action code is entered into LR2000, the same information must still be entered manually into the Bond and Surety System. In addition, these changes only apply to data entered into the Bond and Surety System starting in September 2014, so all previously entered data will not be added to LR2000 unless manually entered.

---

## BLM Has Limited Assurance That Bonds for Wind and Solar Rights-of-Way Will Cover Reclamation Costs

BLM has limited assurance that bonds for wind and solar rights-of-way will cover reclamation costs. Specifically, we found that 14 wind and solar development rights-of-way were underbonded by as much as \$15 million in total. In addition, we found wide variation in how BLM staff documented bond decisions for wind and solar project rights-of-way. Further, BLM does not adequately ensure that wind and solar bond instruments are properly secured, handled, and stored. BLM also inconsistently adheres to its policies for the periodic review of the amounts of wind and solar bonds to verify their adequacy.

**Underbonding of wind and solar development projects.** We found that 14 out of 45 wind and solar development rights-of-way were underbonded by as much as \$15 million in total—approximately \$5.5 million for wind rights-of-way and as much as \$9 million for solar rights-of-way—according to our review of BLM project files and data.<sup>21</sup> Specifically, we identified 10 wind rights-of-way where the bond amount was lower than the \$10,000-per-turbine minimum established in BLM’s 2008 wind policy. These 10 rights-of-way were underbonded by a total of

---

<sup>21</sup>We reviewed all BLM wind and solar energy development projects—45 in total—for which BLM held a bond as of April 15, 2014.

---

approximately \$5.5 million. Nine of those rights-of-way were authorized prior to the 2008 policy; however, for rights-of-way that were authorized before the policy took effect, BLM officials told us they directed staff to obtain bonds that meet the \$10,000-per-turbine minimum. BLM officials told us that they are in the process of obtaining bonds for these 9 rights-of-way. One right-of-way was reauthorized in 2012 at about \$1,500 per turbine.<sup>22</sup> BLM's files show that the bond amount for the right-of-way was determined using salvage values of the equipment. While salvage values may be considered in estimating reclamation costs, BLM officials told us the 2008 policy does not permit salvage values to be used to reduce the bond below the \$10,000-per-turbine minimum.<sup>23</sup> BLM officials told us they are currently developing a reclamation cost estimate for this right-of-way, which will help them develop a revised bond.

We also found four solar rights-of-way that may be underbonded by as much as \$9 million. These rights-of-way were part of a single solar project with a total estimated reclamation cost of approximately \$27.5 million.<sup>24</sup> This figure includes \$18.5 million for decommissioning and removal of project structures and equipment and \$9 million for revegetation and restoration. However, the project is currently bonded at \$18.5 million, an amount that may only cover the decommissioning and removal of structures. BLM officials explained that because the project is in California—where recycling of materials is required—the \$9 million estimated for revegetation and restoration would be covered by the salvage value of project structures. While the salvage value presented in the documents we reviewed may be sufficient to cover those costs, the project's documentation did not indicate that BLM officials included these costs when setting the total bond amount.

**Unclear documentation of bond decisions.** We found wide variation in how BLM staff documented bond decisions for wind and solar project rights-of-way. Specifically, for 21 of the 33 wind rights-of-way we

---

<sup>22</sup>This right-of-way was underbonded by approximately \$3.9 million.

<sup>23</sup>BLM officials told us that they had originally sought to bond this project above the minimum, at \$25,000 per turbine based on the size of the turbines, but the right-of-way holder appealed the bond determination to the Interior Board of Land Appeals. The Interior Board of Land Appeals is an appellate review body for the Department of the Interior. According to BLM officials, the board decided to remand the decision to BLM.

<sup>24</sup>This project consists of four rights-of-way, each with their own bond.

---

reviewed, there was little or no documentation to support the bond amount. For some of these rights-of-way, there was no documentation because BLM staff defaulted to the minimum amount set by BLM's wind policy without conducting any site- or project-specific analysis. For the remaining 12 wind rights-of-way, the project files contained documentation that BLM officials used to support their bond decisions; however, this documentation varied widely. For example, for 1 right-of-way, the holder developed a reclamation cost estimate,<sup>25</sup> but the estimate did not reflect the current state of the project and the estimated costs were greater than the bond that BLM required. And for 6 rights-of-way, the documentation outlined the cost of decommissioning and removal of structures, but it did not include cost estimates for revegetation of the project site. We also found that BLM inconsistently documented bonding decisions for 2 solar rights-of-way. Specifically, for 1 right-of-way, the holder did not develop a reclamation cost estimate, as directed by BLM's 2010 solar policy. As a result, it was not clear from the project files what BLM considered in determining the amount of the bond that was in place. In another case, BLM allowed the right-of-way holder to provide the bond in phases as the project was constructed, but there was no documentation demonstrating how each phase's reclamation costs were estimated, or what the payment schedule and amounts of future bonds would be.

We also found discrepancies between information in the project files and what was recorded in LR2000 or the Bond and Surety System in 13 of the 45 wind and solar rights-of-way. For example, for 1 wind right-of-way, the files indicated the applicant's initial plan to build 24 turbines, but LR2000 showed the project had 20 turbines. A BLM official told us that since the right-of-way's original authorization in the 1980s, the type and number of turbines had changed over time. However, there was no documentation of these changes in the files, and the BLM official told us that, as a result of our inquiry, he had to go and physically inspect the right-of-way to confirm the type and number of turbines. Federal standards for internal control call for transactions and other significant events to be clearly documented and that the documentation should be readily available for examination.<sup>26</sup> BLM has not issued policies that direct BLM staff to

---

<sup>25</sup>BLM's wind policy does not direct applicants to develop a reclamation cost estimate for a wind project right-of-way. However, according to BLM officials, BLM may direct an individual applicant to develop a reclamation cost estimate or may develop one itself.

<sup>26</sup>[GAO/AIMD-00-21.3.1](#).

---

document information related to bond decisions in the project files. According to BLM officials, they will develop these policies once the proposed rule is finalized.

**Inadequate handling and storing of bonds.** BLM also does not adequately ensure that wind and solar bond instruments are properly secured, handled, and stored. BLM staff in two field offices told us bonds were stored in the files for the rights-of-way, rather than in a locked cabinet or safe. In one of these offices, a staff member told us that about 20 percent of the bond instruments were stored in the project files, and the remaining bond instruments were stored in a safe. However, in that office, that staff member told us that someone had mistakenly shredded the bond instruments kept in the safe because the individual did not know what they were. According to BLM's manual regarding records administration,<sup>27</sup> offices should ensure that appropriate internal controls and safeguards are in place to prevent the loss of official documentation. BLM has general guidance on records retention and storage, and at least one office within BLM's Energy, Minerals, and Realty Management Directorate has detailed guidance on the acceptance, assessment, and storage of bond instruments.<sup>28</sup> However, the National Renewable Energy Coordination Office, which oversees wind and solar energy projects, does not have policies or guidance related to the proper handling and storage of bond instruments. As a result, BLM cannot assure that all bonds are properly maintained and secured, leaving the federal government potentially at risk financially if reclamation costs are not covered by the right-of-way holders.

**Inconsistent adherence to periodic review policies.** BLM inconsistently adheres to its policies for the periodic review of wind and solar bonds to verify their adequacy. BLM's wind and solar policies direct officials to review the adequacy of wind bonds every 5 years and solar bonds every year. Of the 45 wind and solar rights-of-way we reviewed, 23 had bonds that were at least 4 months overdue for an adequacy review. Some BLM officials responsible for these reviews told us that they were not aware that bonds were supposed to be reviewed. Others told us they

---

<sup>27</sup>Bureau of Land Management, *BLM Manual, MS-1270: Records Administration* (October 1992).

<sup>28</sup>Bureau of Land Management, *Fluid Minerals Bond Processing User Guide* (December 1996).

---

were aware that bonds were to be reviewed but had not completed the reviews due to workload and staffing constraints. BLM officials told us that LR2000 contains information such as the authorization date that can be used to determine when a right-of-way is due for review. However, LR2000 does not automatically notify BLM officials that a right-of-way is due for its periodic review. Several BLM officials told us that it would be possible to set up an action code in LR2000 to provide such automatic notification. If reviews of bond amounts are not conducted in a timely manner, BLM officials cannot be sure that bonds in place are adequate to cover reclamation costs.

BLM does not have detailed policies to ensure that all bonds are properly maintained and secured and bond decisions accurately documented in project files. In addition, BLM has no standard for the timely entering of data of wind and solar project data into LR2000 and no data standards for the Bond and Surety System. As a result, BLM may not have accurate and complete information with which to track wind and solar bonds, and BLM has limited assurance that the bonds in place will be adequate to cover reclamation costs if the right-of-way holder does not meet its obligations. As a result of these findings and to help ensure that bonds are adequate to cover reclamation costs for wind and solar projects on federal land, we made five recommendations to the Secretary of the Interior in our June 2015 report. Specifically, we recommended that the Secretary direct the Director of the Bureau of Land Management to

- develop detailed policies for processing wind and solar bonds to ensure bonds are properly secured, handled, and stored;
- develop policies that detail how information related to bonding decisions should be documented in project files;
- develop a policy that all data for wind and solar energy projects be entered in LR2000 and the Bond and Surety System within 10 business days;
- establish data standards for the Bond and Surety System; and
- develop an LR2000 action code to automatically notify BLM staff that a right-of-way is due for a bond adequacy review.

In its comments on a draft report, the agency concurred with each of these recommendations.

---

Chairman Gohmert, Ranking Member Dingell, and Members of the Subcommittee, this completes my prepared statement. I would be pleased to answer any questions that you may have at this time.

## GAO's Mission

The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.

---

## Obtaining Copies of GAO Reports and Testimony

The fastest and easiest way to obtain copies of GAO documents at no cost is through GAO's website (<http://www.gao.gov>). Each weekday afternoon, GAO posts on its website newly released reports, testimony, and correspondence. To have GAO e-mail you a list of newly posted products, go to <http://www.gao.gov> and select "E-mail Updates."

---

## Order by Phone

The price of each GAO publication reflects GAO's actual cost of production and distribution and depends on the number of pages in the publication and whether the publication is printed in color or black and white. Pricing and ordering information is posted on GAO's website, <http://www.gao.gov/ordering.htm>.

Place orders by calling (202) 512-6000, toll free (866) 801-7077, or TDD (202) 512-2537.

Orders may be paid for using American Express, Discover Card, MasterCard, Visa, check, or money order. Call for additional information.

## **Cosponsor the Public Lands Renewable Energy Development Act, H.R. 2663**

**From: The Honorable Jared Polis**

**Sent By: [Jennifer.George-Nichol@mail.house.gov](mailto:Jennifer.George-Nichol@mail.house.gov)**

**Bill: H.R. 2663**

**Date: 6/15/2015**

*Support American energy security by encouraging development of renewable energy resources on public lands!*

**Sponsors and Original Cosponsors so far in the 114th Congress (30):** Paul Gosar\*, Jared Polis\*, Joe Heck\*, Mike Thompson\*, Trent Franks\*, Raul Ruiz\*, Dan Benishek, Rod Blum, Tony Cardenas, Matt Cartwright, Gerald Connolly, Kevin Cramer, Raul Grijalva, Michelle Lujan Grisham, Crescent Hardy, Mike Honda, Jared Huffman, Ann

*Kirkpatrick, Doug LaMalfa, Alan S. Lowenthal, Ben Lujan, James P. McGovern, Martha McSally, Steve Pearce, Matt Salmon, David Schweikert, Mike Simpson, Kyrsten Sinema, Dina Titus, Ryan Zinke.*

Dear Colleague:

Renewable energy sources like wind, solar and geothermal are an integral part of the United States' energy strategy. Our nation's public lands can play a critical role in supporting that mission, but uncertainty in the permitting process impedes or delays our ability to harness their renewable energy potential. To address this problem, we plan to reintroduce the Public Lands Renewable Energy Development Act (H.R.596 in the 113th Congress).

This legislation streamlines the permitting process for wind, solar and geothermal development on public lands and establishes a revenue sharing mechanism that ensures a fair return for all.

The bill in the 113th Congress had 61 cosponsors and was also supported by 60+ organizations including the Congressional Sportsmen's Foundation, NACo, the Western Governors' Association, as well as numerous county, sportsmen and local conservation groups.

Senators Dean Heller (R-NV), Martin Heinrich (D-NM), Jim Risch (R-ID), and Jon Tester (D-MT) introduced the Senate companion on May 21, 2015 and this bill contains the exact same text.

Public land management agencies need a permitting process tailored to the unique characteristics and impacts of renewable energy projects. This bipartisan bill removes government red tape and develops a streamlined process that will drive investment towards the highest quality renewable sources.

The legislation also establishes a revenue sharing mechanism that ensures a fair return for all. The Public Lands Renewable Energy Development Act distributes certain revenues derived through this Act by returning 25% to the state where development takes place, 25% to the counties of origin, 15% is directed for the purposes of more efficiently processing permit applications and reducing the backlog of renewable energy permits, and 35% is deposited into a fund for sportsmen and conservation purposes, including increasing access and outdoor recreation like hunting and fishing.

Since federal lands are not taxable, state and local governments deserve a share of the revenues from the sales of energy production on lands within their borders. These resources will help local governments deliver critical services and develop much-needed capital improvement projects, such as road maintenance, public safety, and law enforcement.

Our nation's public lands must play a critical role in our country's energy future. We encourage you to become a cosponsor of the Public Lands Renewable Energy Development Act of 2015 and help the United States create jobs, make further progress towards energy independence, and preserve our nation's natural wonders.

Notable changes to the bill since last Congress:

- Removes the outdated pilot program provision. The new permit language is modeled

after the oil and gas permitting pilot program established by Sec. 345 of the Energy Policy Act of 2005 and modernized last December by the bipartisan BLM Permit Processing Improvement Act of 2014.

- This Congress' bill includes an important provision that makes clear counties will not be penalized by the revenue sharing provisions in the bill and that such payments to counties are in addition to PILT payments.
- Establishes Variance Areas, additional federal lands identified by the Secretary of Interior that are suitable for responsible renewable energy development.
- Requires interagency coordination as well as coordination with states, tribes and local governments.

To cosponsor this legislation or if you have questions, please contact Jennifer George-Nichol at [Jennifer.George-Nichol@mail.house.gov](mailto:Jennifer.George-Nichol@mail.house.gov).

**Date:** Wednesday, July 01, 2015 11:44:26 AM  
**Attachments:** [BFEG July Mtg 2015 Draft Agenda.pdf](#)

---

Shirley,

I'm glad I got to talk to you this morning. Attached is the draft agenda for the upcoming BFEG meeting. There are several highlights that may be of interest to you and Senator Heitecamp.

- We will be discussing BFEG governance and decision making.
- There will be an update and discussion on Special Salary Rates.
- We are establishing a housing theme for the afternoon. HUD's North Dakota Field Office Director, Joel Manse will be joining us to discuss workforce housing programs.
- Chairman Fox of the Three Affiliated Tribes has been invited to speak.
- The afternoon will have a housing theme. We will be hearing from Vision West ND about their activities with an emphasis on housing. Joel Manske, North Dakota Field Office Director for the Department of Housing and Urban Development will be talking about workforce housing programs.

The BFEG meeting will be held in conjunction with the Patterson Lake Housing ribbon-cutting ceremony. That is scheduled for Thursday, 16 July at the Patterson Lake Housing project site. As you know, Patterson Lake is a success story of federal interagency collaboration. The Departments of Agriculture, Defense, and Interior pooled resources in response to the housing challenges of western North Dakota. The result is an effective recruitment/retention strategy that created temporary housing for federal employees.

Following the ribbon-cutting on Thursday, there will be a tour of the Theodore Roosevelt National Park South Unit near Medora, ND. Park Superintendent and BFEG member Wendy Ross will be our tour guide. We will talk about oil and gas development as it relates to the park known as the "Cradle of Conservation."

I hope you can join us for all or part of the event.

---

Thank you, Shirley. I can't figure out why the first message didn't go through, but I appreciate your help in connecting. The original message is below.

Shirley,

I'm glad I got to talk to you this morning. Attached is the draft agenda for the upcoming BFEG meeting. There are several highlights that may be of interest to you and Senator Heitkamp.

- We will be discussing BFEG governance and decision making.
- There will be an update and discussion on Special Salary Rates.
- We are establishing a housing theme for the afternoon. HUD's North Dakota Field Office Director, Joel Manse will be joining us to discuss workforce housing programs.
- Chairman Fox of the Three Affiliated Tribes has been invited to speak.
- The afternoon will have a housing theme. We will be hearing from Vision West ND about their activities with an emphasis on housing. Joel Manske, North Dakota Field Office Director for the Department of Housing and Urban Development will be talking about workforce housing programs.

The BFEG meeting will be held in conjunction with the Patterson Lake Housing ribbon-cutting ceremony. That is scheduled for Thursday, 16 July at the Patterson Lake Housing project site. As you know, Patterson Lake is a success story of federal interagency collaboration. The Departments of Agriculture, Defense, and Interior pooled resources in response to the housing challenges of western North Dakota. The result is an effective recruitment/retention strategy that created temporary housing for federal employees.

Following the ribbon-cutting on Thursday, there will be a tour of the Theodore Roosevelt National Park South Unit near Medora, ND. Park Superintendent and BFEG member Wendy Ross will be our tour guide. We will talk about oil and gas development as it relates to the park known as the "Cradle of Conservation."

I hope you can join us for all or part of the event.

*Jim*

Mr. Lies,

The Bakken Federal Executives Group (BFEG) will be meeting on Wednesday, 15 July 2015 at the Ramada Grand Dakota Hotel. Attached is the draft agenda. There are several highlights that may be of interest to you and Representative Cramer.

- We will be discussing BFEG governance and decision making.
- There will be an update and discussion on Special Salary Rates.
- Chairman Fox of the Three Affiliated Tribes has been invited to speak.
- The afternoon will have a housing theme. We will be hearing from Vision West ND about their activities with an emphasis on housing. Joel Manske, North Dakota Field Office Director for the Department of Housing and Urban Development will be talking about workforce housing programs.

The BFEG meeting will be held in conjunction with the Patterson Lake Housing ribbon-cutting ceremony. That is scheduled for Thursday, 16 July at the Patterson Lake Housing project site. As you know, Patterson Lake is a success story of federal interagency collaboration. The Departments of Agriculture, Defense, and Interior pooled resources in response to the housing challenges of western North Dakota. The result is an effective recruitment/retention strategy that created temporary housing for federal employees.

Following the ribbon-cutting on Thursday, there will be a tour of the Theodore Roosevelt National Park South Unit near Medora, ND. Park Superintendent and BFEG member Wendy Ross will be our tour guide. We will talk about oil and gas development as it relates to the park known as the "Cradle of Conservation."

Please contact me with questions. I hope you can join us for all or part of the event.

**Date:** Sunday, July 12, 2015 12:34:04 PM  
**Attachments:** [Questions - fracking rule - draft.docx](#)

---

Jill - attached are my initial thoughts on potential questions for Wednesday's hearing. Wanted you just to see which directions we might be headed.

Thanks,

--Steve

1. Director Kornze, the entire Republican argument seems to start with the conclusion that this rule will be astronomically expensive, imposing crushing operational and administrative burdens on oil and gas drillers. Your agency says that's not the case. How did you come up with your estimates? Did you just make them up to make the rule look affordable? [*Opportunity for an explanation of the economic analysis process, stressing the amount of rigor that goes into it*] Have you seen a similarly robust analysis for the industry's estimates of the expense of this rule? [*Potential opportunity to bring up the fact that Lynn Helms just made stuff up, and other industry estimates depend on a willful misreading of the rule.*]
2. Director Kornze, one of the themes of the EPA study on fracking, as well as the recently-released California Commission on Science and Technology Report, is that we need more data about fracking to really understand its risks. Would the BLM rule help us with this? [*Opportunity to discuss the various data gathering provisions, and potentially data on cementing failures in particular.*] Professor Wiseman, do you agree that the BLM rule would provide a wealth of new data about fracking?
3. Mr. Hetrick, the industry's extreme cost estimates seem to be based on the expectation that companies would need to set extra casing and do extra cementing to protect additional aquifers. But in a recent court filing, Steven Wells, the top oil and gas person at BLM, says the rule is very clear: if you have 200 feet of good cement above the area to be fractured, all aquifers above that are considered isolated and protected. Director Kornze, is that a correct interpretation of the rule? [*Answer*] Mr. Hetrick, how can the industry claim this rule will require new testing and casing when there's this very simple, easily met standard in the rule of 200 feet of cement above the zone to be fractured? [*Possible question about existing state regulations on cement above the production zone.*]
4. Ms. Wiseman, the states of Colorado and Wyoming use a line from one of your articles to support their argument that the Halliburton loophole in the 2005 Energy Policy Act was intended to keep the federal government out of fracking regulation entirely. Do you agree with that? [*Answer*] I'd like to point out that the states quote two Members of Congress from 2005 to support their argument: then-Congressman Markey and then-Senator Feingold, and [wait for potential quote from Markey's office]
5. [If there is a witness there who has made a SDWA argument] When the Safe Drinking Water Act was passed, the U.S. Geological Survey was in charge of regulating oil and gas operations on federal lands. The House Report on the Safe Drinking Water Act explicitly said, quote, "The Committee does not intend any of the provisions of this bill to repeal or limit any authority the USGS may have under any other legislation." Seems pretty clear – the Safe Drinking Water Act did not alter the Interior Department's authority to regulate oil and gas operations. Given that, what is your argument for why the Safe Drinking Water Act somehow excludes federal regulation of hydraulic fracturing by the Department of the Interior?

6. Director Kornze, the Department of the Interior has existing regulations that cover drilling, casing, cementing, logging, abandonment, and other issues, correct? *[Yep]* When DOI promulgated those, did it point to specific failures of casing and cementing on public lands, or other major incidents, to justify why it was issuing those regulations? *[Not to my knowledge – of course, preambles in the 40s are kind of nonexistent, so I can't be sure there weren't incidents DOI was reacting to. But the idea is to point out that the bulk of the existing regs were issued to be precautionary, not necessarily reactionary.]* Professor Wiseman, do you know if the states also had oil and gas regulations when DOI issued their oil and gas regulations? *[I would imagine the answer to this is yes]* To either of your knowledge, did the States ever challenge DOI's authority to issue those regulations, or did industry sue saying DOI hadn't demonstrated there was clear evidence that oil and gas drilling was unsafe? *[Not aware of any examples of this, but the idea here is to highlight that the "fracking is safe, so there's no need to federally regulate it" argument could have been made for oil and gas drilling for the better part of a century, but wasn't.]*
7. Director Kornze, the industry has complained they couldn't possibly meet the certification requirements in the rule, since the drillers don't have the secret chemical information that the service companies hold. Won't that make it impossible for industry to comply with the rule? *[Opportunity for an answer of how the rule works, with operators being able to pass along a certification from the owner of the info, and the operators only certifying that they will maintain the ability to get that data from the owner if necessary.]* Have you made this clear to industry? *[Opportunity to mention 5-27-15 NK letter to Halliburton that says, "the rule does not require that the [trade secret] information be submitted directly by the operator."]*
8. Professor Wiseman, industry insists that operators can't be held responsible for what their contractors do at a drilling site, since they're totally different companies with their own proprietary information. Does you believe that argument holds water? *[Should be no, since it's a longstanding tenant of federal oil and gas regulation that the operator is responsible for everything on the lease.]* Mr. Hetrick, do you agree with that? When Newfield is operating on a lease, is it ultimately responsible for what happens on that lease? *[He can either say yes, refuting one of industry's arguments in the court case, or he can say no, and indicate they're not following federal regulations.]*
9. Professor Wiseman, the industry has made an argument that BLM has improperly required information in the final rule to deal with frack hits – the increasingly common occurrence where fracking one well unexpectedly kicks fluid out of another one – because they didn't mention frack hits in the proposed rule. Do you think industry has a point there? *[No – two organizations, the Environmental Defense Fund and Sportsmen for Responsible Energy Development submitted comments during the comment period specifically asking BLM to address frack hits in the final rule, which meets the standards for logical outgrowth, or whatever the proper APA terminology is.]*

10. Professor Wiseman, the industry has argued that there are completely new requirements in the fracking rule because even though many of the requirements are the same as in Onshore Order Number 2, which was issued in 1988, that order can't have superseded the regulations issued in 1982. Do you think they're correct? *[No. The Onshore Orders are issued after notice-and-comment rulemaking, and in regulation the Onshore Orders are explicitly given the force of regulation.]*
11. Professor Wiseman, the states and the Majority have argued that the states have been doing a near-perfect, if not perfect, job of regulating fracking from many years now. Do you believe that states have demonstrated that there's no need for any federal role here, or are there ways that this rule can actually help improve how the states are regulating?
12. Director Kornze, the head of the North Dakota Industrial Commission ... state of North Dakota has said they think the fracking rule will delay permit reviews by six months or more. Do you agree with that?
13. Mr. Hetrick, has there ever been a case of faulty casing or cementing leading to groundwater contamination? *[He would have to say yes, and if he tries to avoid doing that, Wiseman or Kornze should be able to answer this.]*
14. Mr. Hetrick, when you drill a well on federal land, do you submit any information to BLM that you consider confidential business information? *[He should say yes – they submit a lot of data about geology and wells that is considered confidential.]* Are you aware of any cases where BLM has improperly divulged that information, for your company or for any company operating on federal land?
15. Director Kornze, it seems to me like the industry is almost willfully refusing to listen to the explanations that you give them about the ease of complying with this rule. It reminds me of the actors in infomercials who find it impossible to do really simple tasks, like pouring soda or hanging up clothes. You tell them they can comply with the rule by doing X, which they are already doing, and they'll say, "But what if we also have to do Y and Z and A through K and do words really have any meaning anyway?" Do you feel like the industry has been having trouble acknowledging some straightforward explanations your agency has been providing? *[Could be an opportunity to discuss things like trade secret protections, protection of usable water with 200 feet of cement, or other cases where industry seems to ignore clear statements in the preamble that explain how to comply, if BLM is interested in going there.]*
16. Director Kornze and Professor Wiseman, the states argue that for the federal government to regulate fracking is an infringement on their sovereignty. Does that make sense? And how would that regulation be an infringement on their sovereignty when all the other BLM oil and gas regulations apparently aren't?

17. Professor Wiseman, the states argue that the federal government has never regulated hydraulic fracturing. Do you agree with that statement? *[Opportunity to discuss the 1942 regulations that required DOI approval before all well stimulation activities on federal lands, then the change in 1982 to only require it for non-routine fracturing, when fracking was done very differently than it is today.]*
18. Director Kornze, there are concerns that BLM's staffing levels are inadequate to handle the additional work from the fracking rule. Now, it seems that Congress can react to that concern in two ways: we can argue that we shouldn't bother establishing baseline protections for public lands, or we can provide BLM with the additional resources it needs. I'd argue that we should provide your agency with the resources it needs. I know one of the challenges BLM has in hiring engineers is competition with private industry – is there anything Congress can do to help you with this issue? *[Lots of ways to ask this question – doesn't have to be about hiring authority, and is largely dependent on the latitude for potential answers regarding resources.]*
19. Director Kornze, opponents of the rule often say that it's unnecessary because over 99 percent of the wells drilled on public land are in states that already have fracking regulations. I guess that assumes that the places where people are drilling never changes. As you've mentioned, there are over 30 states with federal oil and gas leases, but only about half of those have fracking regulations. So if some new technology opens up previously inaccessible resources, we could see drillers moving into these states that are pretty quiet right now. That sounds familiar – hasn't BLM seen something like that in recent years? *[North Dakota experience]*
20. Director Kornze, the states say they're better positioned to regulate hydraulic fracturing because they understand the local geology and the local environment far better than BLM does. This sounds like you have a bunch of permit reviewers in Washington, DC, completely detached from where these wells are being drilled. Is that the case? *[No – opportunity to explain what a BLM Field Office is]*
21. Professor Wiseman, when my colleagues in the Majority complain about so-called duplicative regulation, they imply that the federal government should just stop regulating entirely and leave it to the states. Does that seem appropriate for public lands? *[Idea here is to point out that because these are public lands, BLM has a certain responsibility to those lands, a responsibility explicitly given to them through FLPMA. Simply leaving it to the states would be a violation of FLPMA, and an abrogation of BLM's responsibility.]*
22. Professor Wiseman [or Director Kornze], the Majority often refers to this rule as a “one size fits all” regulation, and BLM says they included the variance provision as a way to address that. But, in fact, aren't BLM oil and gas rules inherently extremely flexible, even aside from the variance provision in this rule? *[Yes – BLM regulations just set the floor, and even without a variance states are free to set additional regulations above the BLM's floor, and operators are required to follow those.]*

23. Director Kornze, my friend from Wyoming is very proud of the strong fracking rules her state has implemented, and is concerned that once the BLM rule goes into effect those strong rules would be overturned. I could certainly understand her concern if that was the case. But let's say your rule went into effect tomorrow. Would a company drilling on federal land in Wyoming need to stop doing those things the state requires in order to come into compliance with the BLM rule? *[Nope – unless the state wasn't being as stringent as the BLM rule. But as the state is bragging how much stronger their rules are, that wouldn't be an issue. And this is stressed in Steve Wells' 2<sup>nd</sup> Declaration, paragraphs 22 and 23.]*
24. Director Kornze, the states argue that long federal permitting times make companies avoid federal land, and that as a result drilling and oil production on federal lands is going down. Is that true? *[No. Onshore oil production is up 45 percent since 2008. And in North Dakota, the number of wells drilled has gone up five years in a row, more than doubling (2.6 times, to be exact) since 2009. And, in fact, companies have 356 excess drilling permits they haven't used in North Dakota (169 on federal lands and 187 on indian lands)]*
25. Director Kornze and Professor Wiseman, the Chairman of this Committee said recently that, quote, "the DOE and the EPA have both found fracturing safe." FactCheck.org has already pointed out this is not what the EPA found, but could either of you clarify what the Department of Energy has said? *[Chance to elaborate on the Secretary of Energy Advisory Board's recommendations that additional regulations were necessary.]*
26. Director Kornze, do we know how many blowouts occur during onshore oil and gas drilling each year? How about casing or cementing failures? [???
27. Mr. Hetrick, would you say we have a widespread, systemic problem of plane crashes in this country? [answer] I'd say we don't. I'd say we have an extremely safe aviation system, and crashes are extremely rare. Yet we have a very robust set of regulations in place regarding airline safety, which I believe most people strongly support. When we're dealing with oil and gas drilling, which has the potential for destroying people's drinking water, I don't think we should wait for a systemic problem to arise. We should be precautionary, and prudent, and enact strong regulations *before* problems arise. Because even a handful of incidents – and we have already seen more than a handful of incidents – demand action. *[According to the National Transportation Safety Board, there were over 9 million commercial departures in 2013, with only 9 fatalities from 2 accidents. There were only 23 accidents total. Which means, on average, one accident per 400,000 flights. On average, there are about 30,000-50,000 wells drilled in the United States each year – in 2013 there were 7,662 spills, leaks, blowouts, or other problems in the top 15 oil and gas states.]*

# Subcommittee on Energy and Mineral Resources

Doug Lamborn, Chairman

Hearing Memo

July 13, 2015

**To:** All Natural Resource Committee Members

**From:** Subcommittee on Energy and Minerals Staff (x5-9297)

**Subject:** Oversight hearing on “*The Future of Hydraulic Fracturing on Federally Managed Land*”

---

The Subcommittee will hold an oversight hearing on “*The Future of Hydraulic Fracturing on Federally Managed Land*” on **Wednesday, July 15, 2015 at 10:00 A.M. in Room 1324 Longworth House Office Building**. This hearing will focus on the Bureau of Land Management’s (BLM) final hydraulic fracturing rule, notably how it duplicates state efforts, causes unnecessary delays and burdens to operators, and is premised on questionable authority.

## Policy Overview

- Four states, Colorado, North Dakota, Utah, and Wyoming, energy trade associations, and two tribes, the Southern Utes and the Ute Tribe of Uintah and Ouray County, have filed lawsuits challenging the BLM’s final rule on hydraulic fracturing. Last month, a federal judge issued a stay delaying the effective date of the rule.
- The rule’s variance provision does not permit states to enforce more stringent state hydraulic fracturing regulations on federal lands; rather, it permits the BLM the opportunity to adopt and interpret state rules on federal land. As such, states with federal lands must choose to accept duplicative regulations that will further hamper the permitting process, or abandon their own regulations and adopt the BLM’s.
- Despite the BLM’s insistence that this rule provides a uniform set of regulations throughout the country, operators are reporting that BLM field offices are receiving inconsistent interpretations of the final rule, leading to conflicting messages from various state offices.
- The BLM vastly underestimated the costs of implementation, and the associated delays with the final rule. For instance, North Dakota predicts this rule will add six months or more to the process for an operator to produce on federal land, with a cumulative decrease on revenue to the state of at least \$300 million per year.

## **Witnesses Invited**

*Mr. Tom Fitzsimmons*  
Commissioner  
Wyoming Oil and Gas Conservation Commission  
Cody, WY

*Mr. Lloyd Hetrick*  
Operations Engineering Advisor  
Newfield Exploration Co.  
The Woodlands, TX

*Honorable Neil Kornze*  
Director  
Bureau of Land Management  
U.S. Department of the Interior  
Washington, DC

*Honorable James M. "Mike" Olguin*  
Council Member  
Southern Ute Indian Tribe  
Ignacio, CO

*Ms. Hannah Wiseman*  
Attorneys' Title Professor  
Florida State University College of Law  
Tallahassee, FL

## **Hearing Focus**

This hearing addresses the Bureau of Land Management's ("BLM") final rule on hydraulic fracturing (or "fracing"). Since the BLM first issued an advanced notice of proposed rulemaking, the rule has received sustained criticism from industry, states, and tribes. These entities and groups argue that the rule is premised on questionable statutory grounds, duplicates existing regulations, and would be overly burdensome. There is apparently merit to these claims, as a federal judge recently found that the rule imposed a credible threat of harm on the aforementioned stakeholders, and issued a stay for the effective date. This hearing will examine some of the more egregious issues raised by the stakeholders, and demonstrate that the BLM's final rule would unnecessarily venture into state authority.

## **Background**

Over the past five years, America has vaulted to the forefront of production of oil and gas, due to the technological combination of hydraulic fracturing (“fracing”) and horizontal drilling. This technology has enabled the United States to tap into its vast reserves of shale oil and gas, which in 2014 drove the United States to produce the most crude oil annually since 1986.<sup>1</sup> Fracing has been employed in the oil and gas industry since 1947, and is a “well stimulation technique” in which an “artificial fracture” is created and then “fluid [and propping agents] [are] pumped into the production casing, through the perforations (or open hole), and into the targeted formation at pressures high enough to cause the rock within the targeted formation to fracture.”<sup>2</sup> Fracing *only* refers to the well stimulation process, and *does not* include well completion, construction, or other associated activities.<sup>3</sup>

The majority of increased production has occurred on state and private lands, which in turn has prompted states to adopt new regulatory regimes to ensure that producers carry out hydraulic fracturing activities safely. It is under these state regulatory authorities that fracing on federal land has been successfully operating.

Citing public concern about whether fracing can contaminate underground water sources, whether there is adequate management of well, and whether chemicals used for fracing should be disclosed, the BLM undertook a rulemaking process to address fracing on federal lands.<sup>4</sup> The final rule was announced on March 20, 2015, and was to become effective on June 24, 2015.<sup>5</sup> However, the rule’s effective date has since been postponed due to the issuance of a stay by a Wyoming federal judge.<sup>6</sup>

A recent report by the U.S. Environmental Protection Agency (“EPA”) highlighted the fact that fracing has had no “widespread, systemic impacts on drinking water resources in the United States.”<sup>7</sup> Furthermore, the rule has been recognized as an overreach of the BLM’s statutory powers, and heavily duplicative of the practices of states that have been effective in addressing hydraulic fracturing on both state and federal lands.<sup>8</sup>

During the previous Congress, on multiple occasions the U.S. House of Representatives acted on and passed legislation that would explicitly grant primacy to the states or tribes that have established fracing regulatory regimes.<sup>9</sup> These legislative solutions recognized that states have successfully overseen the hydraulic fracturing processes, and uniquely understand the geographical challenges found within their boundaries. The legislation also further reiterated the congressional intent to remove hydraulic fracturing from the realm of federal regulation with the passage of the Energy Policy Act 2005 (“EPAAct 2005”).

<sup>9</sup> See e.g. H.R. 2728, Protecting States’ Rights to Promote American Energy Security Act, 113th Congress (2013).

## The Final Rule is Premised on a Lack of Statutory Authority or Justification

The BLM justifies its authority of the law under the statutory provisions of the Mineral Leasing Act (“MLA”) and the Federal Land Policy and Management Act (“FLPMA”).<sup>10</sup> Chiefly, the BLM argues that “[e]ach lease is expressly subject to existing and future regulations” and that the BLM “has authority to condition or to deny APDs,” and by extension, the BLM may extend that authority to proposals for hydraulic fracturing operations.<sup>11</sup> This reasoning is flawed, as the BLM’s chief justification for this rule is the protection of groundwater – a duty that belongs to the states and the EPA pursuant to the Safe Drinking Water Act.

Both the MLA and FLPMA are silent as to the protection of groundwater, and the use of hydraulic fracturing. In fact, the Congress – despite the repeated attempts of the House in the 113th – has acted only once on hydraulic fracturing. The EPA Act 2005 explicitly removed hydraulic fracturing from the purview of federal regulatory schemes, and intended the regulation of hydraulic fracturing to remain with the states.<sup>12</sup>

Even if the BLM did have express statutory authority, the need for this rule is highly suspect. As mentioned previously, the BLM argues that “public concern about whether fracturing can lead to or cause the contamination of underground water sources” prompted the necessity of the final rule.<sup>13</sup> However, the final rule references neither the numerous statements by Department of the Interior officials concerning the lack of evidence linking hydraulic fracturing to widespread groundwater contamination, nor a single instance of the process of hydraulic fracturing contaminating groundwater.

Thus, the BLM’s final rule is questionable at its foundation, and is contrary to the EPA’s study. Without express Congressional authority to act, the BLM promulgated a rule that treads on state authority, and ignores Congressional intent.

## The Final Rule Duplicates and Hinders State Regulatory Efforts

In defending the rule, the BLM relies on the argument that roughly half of the states that have producing wells on federally managed lands do not have hydraulic fracturing regulations.<sup>14</sup> Furthermore, the BLM asserts that over 90 percent of wells being drilled on federal land are hydraulically fractured.<sup>15</sup> Thus, the BLM concludes, this rule is needed to provide a baseline for those states without fracing regulations, and a failsafe for those states with regulations.

However, the BLM’s conclusion relies on a false narrative. First, the BLM, within the rule itself, acknowledges that at least 99.3 percent of the total well completions on federal and Indian lands nationwide

Comm. on Natural Resources*, 114th Con., March 24, 2015 (statement of Dir. Neil Kornze, U.S. Bureau of Land Management) (“The Bureau has oversight responsibility for federal oil and gas leases in 32 different States, yet only about half of those States have put rules in place to address modern hydraulic fracturing practices”).

<sup>15</sup> 80 Fed. Reg. 16131.

occur in states that have existing hydraulic fracturing regulations.<sup>16</sup> Indeed, Director Kornze, in his April testimony before the Senate Energy and Natural Resources Committee, stated that the fracturing rule codifies many of the regulations states are “already implementing.”<sup>17</sup> These facts and statements demonstrate that states and Tribes have proactively led the way in regulating hydraulic fracturing – the BLM now seeks to upend those regulations that have been effective in ensuring the safe production of oil and natural gas from federal lands.

The BLM attempted to mitigate state and tribal concerns by inserting a “variance” provision into the final rule. That provision permits a BLM state director to issue a variance for a state or tribal regulation if the director determines “that the proposed alternative meets or exceeds the objectives for which the variance is being requested.”<sup>18</sup> The BLM state director has the final say on whether a variance will be issued, and such determination cannot be appealed.<sup>19</sup>

While the variance provision was intended to respond to tribal and state complaints, the BLM acknowledged in the final rule, “[a] state or tribal variance is not a delegation of full or partial regulatory primacy.”<sup>20</sup> The practical application of obtaining a variance provides no benefit to the state – rather, the BLM’s provision grants the BLM a variance from its own rule. If the BLM finds that a state provision “meets or exceeds the objectives for which the variance is requested,” then the BLM will merely enforce the state rule on federal land. In other words, the BLM will interpret whether operators are complying with a state rule on federal land. In essence, the variance provision only increases duplication, and does not prevent the BLM from questioning State’s policy choices. Even if a state sought a variance, guidance has not been provided to state offices to direct how such a decision would be made, and as such, not a single variance has been granted to date.

The BLM’s rule is highly duplicative, and permits the BLM to make unilateral decisions concerning state regulations without appeal. For states with federal lands, this rule presents a major challenge, and may force the states to adopt the BLM’s less rigorous regulation, or to encourage operators to avoid federal land entirely.

### The Final Rule Will Force Unnecessary Costs and Unknown Delays to the Permitting Process

The BLM’s final rule predicts the rule will impact 2,800 to 3,800 hydraulic fracturing operations per year, at a cost of \$11,400 per operation.<sup>21</sup> This impact, the BLM asserts, will also accompany a 12 hour delay in processing time for the BLM. Both the cost per operation and the potential delays caused by the final rule have been heavily criticized by states, tribes and industry.

The cost of the rule per operation has been greatly underestimated. Both the Independent Petroleum Association of America and the Western Energy Alliance posit the rule only assumed *de minimis* values to the expense and time necessary to prepare and review applications for permission to conduct hydraulic fracturing.

---

<sup>16</sup> See 80 Fed. Reg. 16187.

<sup>17</sup> *Subcommittee Hearing on the Bureau of Land Management’s Final Hydraulic Fracturing Rule: Hearing before the Subcommittee on Public Lands, Forests, and Mining of the S. Comm. On Energy and Natural Resources*, 114th Con., April 30, 2015 (statement of Dir. Neil Kornze, U.S. Bureau of Land Management).

<sup>18</sup> 80 Fed. Reg. 16221.

<sup>19</sup> 80 Fed. Reg. 16221.

<sup>20</sup> 80 Fed. Reg. 16176.

<sup>21</sup> 80 Fed. Reg. 16195.

A study commissioned by the Western Energy Alliance predicted the proposed rule would impose costs of *at least \$345 million annually*, at an estimated cost of \$96,913 per well.<sup>22</sup>

An egregious example of the BLM undervaluing potential costs is their estimate concerning the requirement for operators to store recovered fluids in closed tanks, rather than open pits. A commenter on the final rule explicated this new regulatory imposition could cost potentially \$20 million more per year for a single operator,<sup>23</sup> whereas the BLM estimated a maximum cost to all operators of \$16.4 million.<sup>24</sup> This is an extreme variance, and demonstrates the BLM likely underestimated the costs for compliance.

Additionally, the BLM failed to assess all associated delays with compliance of the new rule. For instance, the rule imposes a new requirement that operators apply for a permit to frac.<sup>25</sup> Operators are able to submit this request as part of their APD, or as a standalone document. If operators choose the latter option, the permit to frac will implicate further National Environmental Policy Act (“NEPA”) analysis. Nowhere in the final rule is this additional NEPA process addressed, even though this alone could add significant delays to the permitting process.

Many conclude the BLM failed to consider all of the potential costs and delays that will affect operators. These aforementioned examples highlight some of the major flaws within the BLM’s rule, and they highlight the lack of foresight the BLM showed while drafting the final rule.

**BEFORE THE SUBCOMMITTEE ON  
ENERGY AND MINERAL RESOURCES**

**COMMITTEE ON NATURAL RESOURCES  
UNITED STATES HOUSE OF REPRESENTATIVES**

**Honorable James M. “Mike” Olguin  
Southern Ute Indian Tribal Council Member  
Southern Ute Indian Tribe**

**Oversight Hearing  
The Future of Hydraulic Fracturing on Federally Managed Lands  
July 15, 2015**

**I. Introduction**

Chairman Lamborn, Ranking Member Lowenthal and members of the subcommittee, I am Mike Olguin, an elected member of the Southern Ute Indian Tribal Council, which is the governing body of the Southern Ute Indian Tribe. I am honored to appear before you to provide testimony regarding the future of hydraulic fracturing regulation on federally managed lands, including Indian lands. For approximately four years, our tribe has actively opposed the Bureau of Land Management’s attempt to lump Indian lands and public lands into a “one size fits all” basket for purposes of approving and regulating hydraulic fracturing. To the unnecessary detriment of our tribal government, which relies upon energy related revenue, we believe the BLM’s approval requirements are poorly conceived. In order to nullify the BLM’s regulatory efforts on our tribe’s lands, we have exercised our sovereign rights by enacting our own hydraulic fracturing regulation. The Southern Ute regulation ensures prudent, environmentally sound practices in a much more reasonable and efficient manner than the BLM’s rule. Our tribal leaders hope that your intervention in the hydraulic fracturing debate will lead to respectful recognition of Indian tribal sovereignty in regulating activities on their own lands, regardless of Executive or legislative policy decisions applicable to federal public lands.

**II. Background**

The Southern Ute Indian Reservation consists of approximately 700,000 acres of land located in southwestern Colorado in the Four Corners Region of the United States. Our Reservation is part of the northern San Juan Basin, an area that has seen widespread oil and gas development over a period of almost 70 years. The revenues we receive from natural gas development of tribal lands on our Reservation are the tribe’s economic lifeblood. For decades, we have worked with industry and with federal agencies to ensure that oil and gas development occurs in an environmentally responsible manner on our lands.

The land ownership pattern within our Reservation is complex and includes parcels of tribal trust lands, parcels of allotted lands owned by individual Indians, parcels owned by non-Indians, federal lands and state lands. In many situations, non-Indian mineral estates are

adjacent to tribal mineral estates. This land ownership pattern is significant and magnifies the impact of differences between federal regulation of Indian lands and state regulation of neighboring non-Indian lands. The burden of unnecessary federal regulation provides a direct incentive for operators to lease and drill on offsetting non-Indian lands and to avoid development of tribal energy resources. The disincentive to develop tribal resources includes ever-increasing fees for processing Applications for Permits to Drill (“APDs”) and permit delays. The burden of federal regulation results in lost revenue to our tribe, as well as potential drainage of tribal minerals.

Hydraulic fracturing involves the underground injection of fluid and proppants under high pressure in order to propagate and maintain fractures and enhance the movement and recovery of oil and gas. Hydraulic fracturing is necessary for the continued development of energy resources from sandstones, shales and coal formations on our lands. Thousands of wells on our Reservation have been stimulated through hydraulic fracturing of sandstones and coalbeds. Preliminary studies also indicate that there are significant recoverable reserves associated with shale formations underlying our Reservation that will require hydraulic fracturing in order to be produced.

Over the course of the extensive history of hydraulic fracturing on our Reservation, there have been no documented cases of adverse environmental impacts resulting from such well stimulation. It should be noted that the hydrocarbon bearing zones on our Reservation are generally located at depths much greater (2,500 to 8,000 feet below surface) than useable water aquifers (typically 100 to 300 feet below surface). Further, the hydrocarbon bearing zones are separated from useable aquifers by thick strata with low permeability. Even with those natural safeguards in place, our tribe has led the effort to ensure that oil and gas development activities do not adversely affect surface or groundwater resources. Significantly, in the course of reviewing APDs on our lands, we have insisted upon regular Bradenhead testing of well integrity and have required cementing of well casings to surface.

In recent years, oil and gas companies have been able to recover oil and gas resources throughout the country from shales and tight formations previously considered unproductive. Technological advances in horizontal drilling and hydraulic fracturing stimulation spurred these resource recovery opportunities. The significant expansion of this activity into geographic areas not previously subject to oil and gas development has fostered debate regarding the environmental effects of hydraulic fracturing. These concerns have, in turn, led the Department of the Interior and the BLM to develop a response intended to ensure the public that, through government oversight and regulation, hydraulic fracturing occurring on federal and Indian leased lands will be undertaken in an environmentally safe and prudent manner. While this goal may appear reasonable, the process employed by the BLM in developing the regulations applicable to Indian lands was flawed and the ultimate set of regulations is objectionable.

### **III. The Process of Consultation with Affected Indian Tribes Was Inadequate.**

#### **A. The Initial Proposed Rule**

In mid- December of 2011, BLM’s Assistant Director for Minerals and Realty Management Michael D. Nedd sent a letter inviting our tribe and other tribes to engage in government-to-government consultation regarding BLM’s intent to develop regulations governing hydraulic fracturing on federal and Indian lands. We welcomed this initial invitation for early consultation. On January 19, 2012, a substantial contingent of our tribe’s staff, including representatives from our Energy Department, Natural Resources Department, and Environmental Programs Division, attended a BLM information session in Farmington, New Mexico, where representatives from the BLM provided basic information about hydraulic fracturing and asked for tribal input regarding the shape that any such regulations might take. We congratulated BLM on this seemingly fresh approach to visiting with tribes at the formative stages of regulation development. We also delivered at that time written comments from our now deceased Chairman, the late Jimmy R. Newton, Jr., that addressed three principal matters: (1) suggestions for process; (2) a summary of the importance of hydraulic fracturing to the tribe; and (3) a summary of potential environmental concerns and protection measures associated with hydraulic fracturing.

In commenting on process, Chairman Newton’s letter specifically urged that “the consultation process include not only an opportunity to comment on proposed BLM regulations but consultation on the formulation of proposed regulations.” Chairman Newton further suggested that “BLM circulate discussion drafts of possible regulations for review and comment before any proposed regulations are issued.” Only later did we learn that our concept of meaningful tribal consultation had been shortchanged from the outset by the BLM. Notwithstanding our requests and suggestions, BLM proceeded to develop draft proposed regulations in isolation and, without disclosing its activities to tribes, submitted those draft regulations to the Office of Management and Budget for publication approval in the Federal Register. This process truly was an example of the federal trustee’s train having left the station before Indian Country had a chance to know that the train was even moving. Within a month following BLM’s publication of the proposed regulation, we submitted written comments to the BLM on June 11, 2012, and expressed our deep concerns with many of the substantive proposals contained in those draft regulations. Our comments at that time reflected our ongoing concern that every extra regulatory step, every extra required report, and every extra approval imposed by the federal government on operators in Indian Country increases the costs of operating in Indian Country and decreases the ability of tribes to attract energy development dollars to our lands.

## **B. The Revised Proposed Rule**

In response to over 177,000 comments, the BLM issued a revised proposed rule on May 24, 2013. Again, our tribe weighed into the discussion, not just by submitting written comments, but by meeting with key officials within the Department of the Interior, the BLM, the Bureau of Indian Affairs (“BIA”), and the White House. Among our substantive comments to the revised proposed rule, we questioned the cost effectiveness of the BLM’s approval requirements; its capacity to interpret cement evaluation logs and cement bond logs; its approach to isolation of geologic zones containing unusable ground water; and the vague—but broad—discretion retained by the BLM to impose potentially unlimited conditions on hydraulic fracturing activities without any established time frames for issuing approval. Most significantly, we urged the BLM to separate its rulemaking on public lands from Indian lands. In calling for that separation, we

emphasized the dramatic differences in federal law and policy underpinning federal public lands and Indian lands, which had spawned separate regulatory regimes for Indian mineral leasing, royalty valuation and collection, and pooling and unitization of subsurface resources, as well as empowerment of tribes in implementing key environmental laws. Further, we specifically reminded the BLM that, under long-established regulations governing Indian mineral leasing, tribes organized under the Indian Reorganization Act of 1934 (“IRA”), like the Southern Ute Indian Tribe, retained the authority to supersede the BIA’s mineral leasing regulations, including incorporated BLM regulations made applicable to tribal lands. *See* 25 C.F.R. § 211.29. In its explanation of the revised proposed rule, however, the BLM stated that Congress had tied its hands and that it lacked the authority to separate tribal lands and public lands in developing the proposed rule. In response, we stated as follows:

For the BLM to suggest that it lacks the power to consider tribal lands and public land distinctly defies decades of statutory and regulatory treatment and is, frankly, insulting. Rather, the proper question is whether there is any reason to treat such lands differently, and, if reasonable grounds are provided for such different treatment, then the BLM should strive to do so.

*See* Comment Letter from Chairman Jimmy R. Newton, Jr. to BLM at 4 (Aug. 20, 2013).

As the subcommittee is fully aware, on March 26, 2015, the Assistant Secretary for Land and Minerals Management, Janice M. Schneider, approved the BLM’s final rule regulating hydraulic fracturing on federal and Indian lands. 80 Fed. Reg. 16128.

#### **IV. The Tribe’s Hydraulic Fracturing Regulation**

On June 16, 2015, the Southern Ute Indian Tribal Council adopted Resolution No. 2015-98, which approved the tribe’s regulation of hydraulic fracturing and chemical disclosure on lands within the jurisdiction of the tribe. As authorized by 25 C.F.R. § 211.29, the tribe’s regulation expressly states that it supersedes the BLM’s regulation. I will briefly summarize the key differences between the Southern Ute rule and the BLM rule. Under the Southern Ute rule, an operator must provide the Southern Ute Department of Energy forty-eight hours advance written notice of its intent to conduct hydraulic fracturing operations. The tribe’s Department of Energy may review operator information related to the proposed activity and may monitor that activity. Following the completion of hydraulic fracturing, the operator must provide the tribe with a detailed report describing the activities. In order to ensure that hydraulic fracturing occurs in an environmentally sound manner, an operator is required to cement all surface and intermediate casing with a continuous column from the bottom of that casing to the surface, and all production casing must be cemented from the bottom of the vertical portion of the production casing to at least fifty feet above the bottom of the intermediate casing. In that regard, the Southern Ute rule is more restrictive than the BLM rule or the state of Colorado’s cementing requirements. The Southern Ute rule provides a better safeguard to water quality and greater certainty to operators, while also eliminating the delays inherent in pre-approval. Like the BLM rule, however, the tribe’s rule also requires storage of wastewater in tanks and the public disclosure of the chemical composition hydraulic fracturing fluids.

In contrast, under the BLM rule an operator must obtain BLM *pre-approval* before the operator may proceed with hydraulic fracturing activities. There is no time period following submission of such an application within which BLM must issue its approval or disapproval. In granting approval, the BLM has the discretion to impose a wide variety of conditions, including the imposition of discretionary conditions that exceed those explicitly required in the rule. Critically, unlike the tribe's straight forward cementing requirement, the BLM rule's cementing requirement is based upon on the isolation of zones that contain useable water, which requires an interpretive water quality analysis. In addition to the inherent delay associated with securing discretionary agency approval, the act of approval for each well arguably triggers the need for a separate analysis under the National Environmental Policy Act ("NEPA"), which invites additional delays through third-party challenges and potential litigation by those opposed to oil and gas development.

In sum, we strongly believe that the Southern Ute rule provides a simpler and more effective way to regulate hydraulic fracturing activity on the tribe's lands than the BLM rule.

## **V. Southern Ute Indian Tribe v. Department of the Interior**

On June 18, 2015, several days before the BLM rule was to become effective, the Southern Ute Indian Tribe filed a lawsuit in the United States District Court for the District of Colorado. *Southern Ute Indian Tribe v. United States Department of the Interior, et al.*, Civil Action No. 1:15-cv-01303-MSK (D. Colo). In that case, the tribe has challenged the lawfulness of the rule, including its failure to recognize an IRA tribe's unconditional right to supersede the BLM final rule. We have also asserted that the rule should be vacated as arbitrary and unreasonable in its treatment of Indian tribes, whose powers of self-governance under statutes and policies have been repeatedly emphasized over the last forty years. The tribe's opening brief on the lawfulness challenge is due on July 23, 2015, and oral argument is scheduled for October 14, 2015.

## **Conclusion**

In conclusion, I am honored to appear before you today on behalf of the Southern Ute Indian Tribe. We recognize that your work involves broad oversight of BLM's role in energy development on public lands, and that energy development on Indian lands is not a matter on which you typically focus. To the extent you can do so, however, we hope that you will assist us in preserving our sovereign rights to regulate activities on our lands. We also hope that the common sense approach that we have taken with respect to our lands will assist you and the BLM in fashioning a reasonable approach to hydraulic fracturing regulation on federal public lands. We look forward to continuing our work with the subcommittee on this and other important matters.

At this point, I would be happy to answer any questions you may have.

**July 15, 2015**

Chairman Lamborn, Ranking Member Lowenthal and distinguished members of the Committee, my name is Lloyd Hetrick. I am a registered professional engineer and the Operations Engineering Advisor for Newfield Exploration Company based in The Woodlands, Texas.

I have more than 36 years of diverse experience spanning all phases of the exploration and production industry, including: drilling, completions, production, Health, Safety and Environmental (HSE), and mechanical integrity. I have served a leadership role in the standard setting process for hydraulic fracturing via multiple federal agency advisory panels and industry trade association committees working to develop and implement appropriate governmental regulations and standards.

Thank you for having me here today.

Newfield is a Fortune 500 independent energy company engaged primarily in crude oil and natural gas exploration and production onshore here in the United States. We are focused on developing unconventional oil and gas reservoirs in the Anadarko and Arkoma Basins of Oklahoma, the Bakken formations of North Dakota and the Uinta Basin of Utah. Roughly 55 percent of our wells drilled domestically during 2014 were administered by the Bureau of Land Management (BLM).

Newfield is the largest oil producer in Utah with more than 225,000 mineral acres in the Uinta Basin including federal, state, tribal and private leases. Our Uinta Basin operations include one of the largest federal secondary recovery units in the continental United States. We maintain a field office near Roosevelt, Utah, with more than 400 employees. Approximately 85 percent of our wells drilled in Utah during 2014 were administered by BLM.

All of our Utah development activities – regardless if conducted on federal, state, tribal or private leases – will ultimately be affected by BLM’s new hydraulic fracturing rule. As I’ll discuss further, there is no practical scenario in which Newfield can hold its state or private leases to a different standard than its federal or tribal leases and coherently manage a compliance program in its Utah operations.

Therefore, this rule impacts everything we do in Utah and adds significant uncertainty and cost to an already low-margin resource play to further complicate the future of hydraulic fracturing on federally managed lands.

The recent downturn in global crude oil prices has resulted in a reduction of Newfield’s investment and workforce in the Uinta Basin and has impacted peer companies similarly – significantly impacting the employment of local contractors and related commerce. At this same time last year, there were 28 rigs running in Utah. Today, there are seven. The economic realities of production in Utah are further undermined by the BLM rule.

This reduction in drilling and production has and will continue to adversely affect employment, wages, federal royalties, taxes and all of the related socioeconomic benefits enjoyed during times of robust development.

It is important to remember that every \$1 million of upstream capital expenditure by independent oil and gas producers results in \$1.1 million in total taxes, \$5.1 million in overall contribution to U.S. GDP and six direct and 33 total upstream jobs. When midstream and downstream factors are considered, America's oil and gas industry supports 9.2 million U.S. jobs and 7.7 percent of the nation's GDP according to the American Petroleum Institute. The industry pays almost \$86 million in federal rents, royalties, bonus payments and income tax payments daily.

Revenue in the form of royalties, rents, bonuses and other payments to American Indian tribes nationwide for the production of oil and gas in FY2014 was reported by the Office of Natural Resource Revenue (ONRR) to be more than \$1.1 billion.

America's oil and gas resources are among the nation's largest sources non-tax revenue to the federal government. For every dollar the government spends administering the federal onshore program, companies return \$83.69 in royalties and leasing revenue to the American taxpayer.

From Utah's federal onshore lands for Fiscal Year 2014, the ONRR reported oil and natural gas revenue in the form of royalties, rents, bonuses, and other payments to the U.S. Treasury in excess of \$302 million.

Unfortunately, the decline Utah activity has already occurred and may continue to negatively impact Utah and especially the Uinta Basin for the foreseeable future.

In addition to the negative economic effects caused by the downturn in crude oil prices, significant regulatory uncertainty already existed for Newfield and other Uinta Basin operators due to the lack of predictability associated with agency reviews mandated by the National Environmental Policy Act (NEPA). While outside the scope of this hearing, it is worth mentioning as an example that Newfield is now in its seventh year of agency review for an infill development Environmental Impact Statement (EIS).

BLM's hydraulic fracturing regulation creates an additional layer of regulatory uncertainty that will materially undermine the ability of the Uinta Basin to compete on an economic basis with other plays in the nation. When any operator is faced with such uncertainty, capital and resources will be redirected to areas where the regulatory process is more certain. This was not anticipated in the rulemaking process and is discussed further below.

I will not dwell on often-recited and *legitimate* arguments by industry that this new rule is unnecessary because of sufficient and continually improving state regulations and lacks appropriate data to justify these new rules. I would however, like to remind the Committee of the EPA's finding of "no widespread, systematic impacts" from hydraulic fracturing in their recently released "Assessment of the Potential Impacts of Hydraulic Fracturing for Oil and Gas on Drinking Water Resources."

I respectfully offer the Committee three categories of concerns and include Newfield-specific examples to support my assertion that if this new BLM regulation is to be implemented, it still needs more work.

I want to recognize my peers at BLM for reaching out to all stakeholders during the rulemaking process. Since 2012, BLM has listened to concerns from all sides and – to a large extent – attempted to find reasonable middle ground. The following arguments are not an indictment of the agency nor of those who have worked to craft the rule in response to direction from more senior political leadership, rather they reflect the complexity of this process.

**The BLM rule, in many cases, impacts non-federal minerals, causes delays and creates inefficiencies that were not properly addressed in the BLM's economic analysis:**

- For operations located in certain BLM regions like North Dakota and Montana operators with state or private leases that are combined within a drilling and spacing unit also including federal minerals, the entire unit becomes subject to the new rule. Other BLM regions such as Utah and Oklahoma limit the extent of the new rule to apply only when the federal tract is penetrated by the wellbore within the drilling and spacing unit.
- With most unconventional oil and gas plays in which horizontal extended reach wells are utilized to properly develop the lands, drilling and spacing units tend to be larger than the conventional vertical units and encompass more lands within the development drilling and spacing unit. Therefore, previously non-applicable minerals are more likely to fall under this new BLM rule. This particular scenario is most clearly demonstrated with the “checkerboard” federal mineral ownership pattern common across the western United States. Although only 50 percent of the checkerboard has federal minerals, 100 percent of the checkerboard becomes subject to the new rule. A similar, but more dramatic scenario exists in Newfield’s Oklahoma operations where a small amount of federal minerals causes a much larger area to become federal jurisdiction. Roughly 1 percent of our Anadarko position is federal minerals, yet even with this small subset of federal minerals, the new rule will apply to more than 10 times that amount. Neither the federal checkerboard nor the Oklahoma example was contemplated in BLM’s new rule.
- In some instances, inadequate cementing records or some potential technical disagreement on Cement Evaluation Log (CEL) interpretation – not a shortfall in well integrity – may result in a new well that cannot be hydraulically fractured or an existing well that cannot be refractured. The cost of such a problem ranges from a few hours of lost operational downtime up to the cost of a \$10 million well.
- Specific to the downtime referenced above, every hydraulic fracturing job requires at least a 48-hour notice to obtain BLM approval of cement-related assurances. However, BLM is barely staffed to provide support during a normal 40-hour work week, certainly not 24/7/365 support.
- Finally, the Office of the Inspector General has recognized that inefficiencies in the Department of Interior’s permit review process impede productivity and that neither BLM nor the operator can predict when permits will be approved. Since site-specific operational plans cannot often be finalized months in advance, operators may be forced to submit applications that include multiple scenarios to ensure operational flexibility. Although some of the proposed operational scenarios may never be implemented, an already overburdened BLM staff will be required to review all components of the new applications.

**This rule has portions that duplicate, contradict or increase confusion with respect to existing state regulations, or in some cases, presents perplexing requirements:**

- Duplication – Surface casing cementing rules are essentially the same in the new BLM rule as are required in all oil and gas producing states.
- Contradiction – The new BLM rule requires pressure measurement on all casing strings during hydraulic fracturing, but the North Dakota Industrial Commission requires the surface annulus to be kept open to protect the surface casing and provide pressure relief, in case a leak occurs.
- Deferral with Uncertainty – The BLM rule says *all* usable water must be protected and further defers the identification of what "usable water" must be protected to states and tribes. This deferral is unambiguous as long as states and tribes use a threshold of 10,000

mg/l TDS, but not all states use this threshold, nor do all states protect *all* usable water. Please remember that “usable” does not necessarily mean “useful” to plants, wildlife or humans.

- Deferral with Uncertainty – BLM recognizes the use of FracFocus for chemical disclosure, but adds additional onerous steps which limit a company’s ability to protect trade secrets and inhibits innovation in this technology-driven part of our business.
- Perplexing – The BLM rule requires that operators make seven illogical affirmations in order to claim trade secret protection when providing public disclosure for proprietary chemicals used during hydraulic fracturing.
- Perplexing – The BLM rule requires a certification that attests to a company’s compliance with all federal, state and local laws, rules and regulations. However, with increased local challenges and initiatives, this certification might be impossible to achieve without a time and date stamp.

**The BLM's strategy to use public review as a secondary regulator will create foreseeable challenges for BLM and the operator and confusion for the public:**

- BLM's *stated* incremental processing time for each new well application is only four hours, so there cannot be much technical analysis planned for the significant amount of new information submitted.
- Considering BLM statements that public access to this information will be facilitated, it appears BLM is promoting several predictable outcomes:
  - The public will be reviewing substantial technical and specialized industry information, of which many will not be familiar. Confusion about the technologies or the processes required to effectively achieve desired environmental and safety outcomes will result in further questions of, and petitions to, BLM and operators.
  - The predictable outcome will be a further-inundated regulator while the operator is faced with the ongoing task of educating the public that hydraulic fracturing has been, and will continue to be a safe well completion technique for almost seven decades.
  - In short, the rule will have failed to provide the public with assurances about the safety of hydraulic fracturing technology while adding delays, costs, and uncertainty for industry and consumers.

In conclusion, if this final BLM rule is to be applied, additional actions need to be taken to provide an economic analysis, operational clarifications and a fundamental clarification on the role of the BLM as the primary regulator for federal and tribal minerals.

Finally, Newfield wishes to associate itself with any written testimony submitted to the committee on this topic by the Independent Petroleum Association of America, the Western Energy Alliance, or the American Exploration & Production Council.

###

Hannah J. Wiseman,<sup>1</sup>

**Written Testimony for “The Future of Hydraulic Fracturing on Federally Managed Lands”**

July 15, 2015, U.S. House of Representatives, Committee on Natural Resources, Subcommittee on Energy and Mineral Resources

**Introduction**

This testimony addresses the Bureau of Land Management Final Rule entitled “Oil and Gas; Hydraulic Fracturing on Federal and Indian Lands” (described here as the “HF Rule”) issued on March 26, 2015.<sup>2</sup> After summarizing key provisions of the HF Rule, this testimony will describe the authority of the BLM to promulgate the rule, the lack of conflict between the HF Rule and other federal statutes, the environmental risks that the rule helps to address, and the ways in which the HF Rule and federal enforcement resources complement and improve upon state regulation of oil and gas development.

**I. Rule summary: The HF Rule addresses certain aspects of the casing and cementing of hydraulically fractured wells, the storage of fracturing wastes, and the disclosure of fracturing chemicals.**

The HF Rule primarily contains requirements for information collection and disclosure, mandating that well operators proposing to hydraulically fracture a well on federal or Indian lands submit data on the geology in the proposed area of the well;<sup>3</sup> existing conditions such as old wells, natural faults and fractures, and usable water in the area;<sup>4</sup> and proposed hydraulic fracturing design, water acquisition, waste management, and disposal practices.<sup>5</sup> After fracturing, operators—entities that drill and hydraulically fracture wells—must disclose data on well depth and fractures; actual water acquisition, waste management, and disposal practices; and the chemicals used in fracturing.<sup>6</sup> Operators can avoid public disclosure of certain chemicals used in the fracturing process by submitting an affidavit to the BLM with information indicating, *inter alia*, the importance of keeping the information confidential.<sup>7</sup> Operators also must collect data on the quality of cementing operations to show that the protective casing and cementing of wells is adequate, and they must monitor the pressure in wells during hydraulic fracturing to ensure that pressures do not compromise the structure (“integrity”) of the well and its casing and cement.<sup>8</sup> Substantive requirements include, *inter alia*, that operators take remedial action if it appears that well cementing was inadequate or that fracturing compromised well integrity<sup>9</sup> and that operators use tanks to store flowback water from fracturing, with certain exceptions.<sup>10</sup> Where state or tribal requirements achieve or exceed the goals of the HF Rule, the BLM may grant a regulation-specific variance from the BLM rule for all wells in the relevant jurisdiction or for individual wells;<sup>11</sup> as discussed below, however, these variances may be unnecessary because BLM rules are a floor, not a ceiling.

**II. The BLM has clear statutory authority to regulate hydraulically fractured oil and gas wells on federal lands.**

The BLM permits and oversees the use of federal lands for a variety of purposes, including grazing, recreation, and oil and gas development, among other purposes. In leasing federally-owned oil and gas,

the BLM—just like private owners of land and minerals—must protect the public’s interest in the minerals and land and ensure that fluid mineral development will not unduly interfere with other uses of land. Indeed, many private landowners include conditions in mineral leases in order to protect their property and natural resources.<sup>12</sup> However, in leasing federal oil and gas resources, the BLM represents broader public interests that diverge from those of most private mineral owners. Resources administered by the BLM are, by law, not managed solely, or even primarily, for pecuniary gain. The BLM’s core statutory mandate, contained within the Federal Land Policy and Management Act (FLPMA), is to manage public lands and resources in a manner that allows for multi-use development of lands, including “a combination of balanced and diverse resource uses,”<sup>13</sup> by current and future generations of people.<sup>14</sup> Congress has made clear that in managing public resources the BLM must give consideration to “the relative values of the resources and not necessarily to the combination of uses that will give the greatest economic return or the greatest unit output.”<sup>15</sup> The BLM therefore must regulate oil and gas development at the surface and belowground to protect its mineral interests and the many other interests that the agency represents on federal lands, such as grazing and recreational interests. Notably, it is also the express policy of Congress to protect “water resource . . . values” on federal lands.<sup>16</sup>

FLPMA responsibilities for managing public lands are baseline responsibilities that apply when the BLM leases minerals on public lands. Beyond this baseline law, the BLM must follow the specific directives of the Mineral Leasing Act (MLA), as amended, when it allows mineral development on public lands. This Act provides, *inter alia*, that the Secretary of Interior (whose responsibilities the BLM carries out) must regulate surface-disturbing activities from oil and gas development and ensure “restoration of any lands or surface waters adversely affected by lease operations” by the operator.<sup>17</sup> It also provides that the Secretary of the Interior shall regulate surface disturbing activities and determine reclamation and other actions required “in the interest of conservation of surface resources.”<sup>18</sup> Under this Act, the BLM may suspend leases where oil and gas operators have failed to protect the environment.<sup>19</sup> In addition to the BLM’s authority under FLPMA, the HF Rule falls clearly within the discretion granted to the BLM by the MLA.<sup>20</sup> Casing and cementing rules prevent oil and gas waste and protect surface (as well as underground) resources, as do rules for the use of flowback tanks.

Federal agencies have long regulated the casing and cementing of wells and other well development activities on public lands. On June 4, 1920, the Secretary of the Interior acting under MLA authority issued operating regulations for oil and gas wells requiring, *inter alia*, notification prior to well drilling, plugging, and abandonment; keeping of records relating to “kinds, length, and sizes of casings used in drilling the wells”; and operator correction of conditions causing damage to water-bearing or other formations or “dangerous to life or property.”<sup>21</sup> The U.S. Geological Survey (USGS)—one of the BLM’s predecessors in managing wells on public lands—provided in a 1942 regulation that the Supervisor could

<sup>16</sup> 43 U.S.C. § 1701(a)(8) (2012).

<sup>17</sup> 30 U.S.C. § 226(g) (2012).

<sup>18</sup> *Id.*

<sup>19</sup> See *Getty Oil v. Clark*, 614 F.Supp. 904, 916 (D. Wyo. 1985) (noting that the Secretary of the DOI may suspend a lease or condition a suspension as is “necessary to protect the environmental values of the leased property”).

<sup>20</sup> See 30 U.S.C. § 189 (2012) (authorizing the BLM “to do any and all things necessary to carry out and accomplish the purposes of this chapter”).

<sup>21</sup> See *Forbes v. United States*, 125 F.2d 404, 409 (9th Cir. 1942) (describing and quoting the regulations).

require the submittal of a well casing program and that drilling, well stimulation, and other well development activities could not occur “without first notifying the supervisor” of a plan.<sup>22</sup>

Many of the BLM’s rules for managing mineral resources on federal lands are more than two decades old,<sup>23</sup> and these rules, like the older USGS rules, have long regulated the casing and cementing of oil and gas wells.<sup>24</sup> Yet oil and gas development has changed dramatically in the past decade. U.S. companies have used hydraulic fracturing for more than sixty years,<sup>25</sup> but the type of fracturing used on many wells changed in the late 1990s and early 2000s.<sup>26</sup> During this time George Mitchell perfected a technique called “slickwater” (also called slick water or slick-water) fracturing in Texas’s “tight” gas formations, which are densely packed formations, and combined this technique with the horizontal drilling of wells.<sup>27</sup> Several years later, slickwater fracturing and similar unconventional fracturing combined with horizontal drilling rapidly spread around the country to other tight sandstone and shale formations,<sup>28</sup> enabling the development of thousands of new wells drilled into these formations—wells that, without unconventional fracturing and horizontal drilling, would not have been productive and would not have been drilled.<sup>29</sup> Although some oil and gas operators also continue to use conventional fracturing techniques, unconventional fracturing combined with horizontal drilling is very common and has triggered much of the recent boom in U.S. oil and gas development.<sup>30</sup>

The HF Rule, issued after the BLM proposed a draft rule and a revised draft rule<sup>31</sup> and received extensive public comments, addresses certain aspects of modern (unconventional) fracturing on land managed by the BLM, lands under which the BLM controls the minerals, and certain Indian lands.<sup>32</sup> This HF Rule does not exceed the BLM’s statutory authority; it has strong statutory support and helps the BLM to fulfill its statutory duties.<sup>33</sup>

FLPMA, the BLM’s organic act,<sup>34</sup> declares that it is “the policy of the United States” that “public lands be managed in a manner that will protect the quality of scientific . . . ecological, environmental, air

<sup>22</sup> 30 C.F.R. § 221.21 (1942); Regulations Applicable to Lands of the United States and All Restricted Tribal and Allotted Indian Lands (Except Osage Indian Reservation), 7 Fed. Reg. 4132, 4134-4135 (June 2, 1942).

<sup>23</sup> See Molly Feiden, Madeline Gottlieb, Alan Krupnick & Nathan Richardson, *Hydraulic Fracturing on Federal and Indian Lands: An Analysis of the Bureau of Land Management’s Revised Proposed Rule*, 29 J. LAND USE & ENVTL. L. 337, 339 (2013-2014) (noting that most of the BLM’s onshore oil and gas operations regulations “were last revised in the 1980s or early 1990s”).

<sup>24</sup> Prior to 2007, the BLM administered an eight-point rule for the casing and cementing of wells on BLM lands. It replaced this with a nine-point rule in 2007. Onshore Oil and Gas Operations; Federal and Indian Oil and Gas Leases; Onshore Oil and Gas Order No. 1, Approval of Operations, 72 Fed. Reg. 10,308, 10,310 (Mar. 7, 2007) (codified at 43 C.F.R. pt. 3160).

<sup>25</sup> See John M. Golden & Hannah J. Wiseman, *The Fracking Revolution: Shale Gas As A Case Study in Innovation Policy*, 64 EMORY L.J. 955, 968 (2015) (comparing sources that describe the first fracturing of wells as occurring in the late 1940s).

<sup>26</sup> See Hong Sun et al., *A Nondamaging Friction Reducer for Slickwater Frac Applications*, Soc’y of Petroleum Engineers, Conference Paper no. 139480 at 1 (2011).

<sup>27</sup> See *id.* at 975 (describing Mitchell’s involvement in helping to perfect horizontal drilling and slickwater fracturing). Techniques similar to the slickwater technique, characterized by large quantities of water and fewer gels and other chemicals, had been used in earlier decades but had not been applied to shales and typically had not been combined with horizontal drilling. Experts typically describe slickwater fracturing as a new, recent technology. See, e.g., Terrence Palisch, Michael Vincent & Patrick Handren, *Slickwater Fracturing: Food for Thought*, 25 SPE PRODUCTION AND OPERATIONS 327, 327 (2010).

<sup>28</sup> See Golden & Wiseman, *supra* note 25, at 966 (“In the past decade and a half, growth in shale gas production has been more than exponential.”).

<sup>29</sup> See, e.g., HALLIBURTON, U.S. SHALE GAS: AN UNCONVENTIONAL RESOURCE. UNCONVENTIONAL CHALLENGES at 1 (2008), available at <http://www.shaleenergyinsider.com/wp-content/uploads/sites/11/2014/01/H063771.pdf> (noting that the Barnett Shale, investigated “as early as 1981,” produced “gas at commercial rates” only when certain fracturing technologies became available).

<sup>30</sup> See U.S. Dept. of Energy, *Why Is Shale Gas Important?*, [http://energy.gov/sites/prod/files/2013/04/f0/why\\_is\\_shale\\_gas\\_important.pdf](http://energy.gov/sites/prod/files/2013/04/f0/why_is_shale_gas_important.pdf) (noting that “U.S. shale gas production has increased 12-fold over the last decade” and is projected to make up 49% of U.S. dry natural gas production by 2035). Experts estimated in 2004 that 30% of hydraulic fracturing jobs used slickwater fracturing. Palisch et al., *supra* note 27, at 327.

<sup>31</sup> Oil and Gas; Well Stimulation Including Hydraulic Fracturing, 77 Fed. Reg. 27,691 (proposed May 11, 2012); Supplemental Notice of Proposed Rulemaking and Request for Comment, 78 Fed. Reg. 31,636 (May 24, 2013).

<sup>32</sup> Oil and Gas; Hydraulic Fracturing on Federal and Indian Lands, *supra* note 2.

<sup>33</sup> See *infra* notes 35-36, 37, and accompanying text.

<sup>34</sup> See *New Mexico ex rel. Richardson v. Bureau of Land Management*, 565 F.3d 683, 688 n.1 (10th Cir. 2009).

and atmospheric, water resource, and archeological values.”<sup>35</sup> It also provides that in administering the Act, the BLM (acting for the Secretary of the Interior, or “Secretary”) must “establish *comprehensive* rules and regulations after considering the views of the general public.”<sup>36</sup> Congress has set out a specific process for the BLM’s leasing and management of federal oil and gas resources on behalf of the public. Congress directs the Secretary to “manage the public lands under principles of multiple use and sustained yield . . . .,”<sup>37</sup> meaning managing resources “so that they are utilized in the combination that will best meet the present and future needs of the American people” and in a manner “that takes into account the long-term needs of future generations for renewable and nonrenewable resources, including, but not limited to, recreation, range, timber, minerals, watershed, wildlife and fish, and . . . scientific and historical value.”<sup>38</sup> The BLM must write comprehensive land use plans, also described as “resource management plans,”<sup>39</sup> and its leasing of oil and gas resources must conform to these plans.<sup>40</sup> If an operator obtains a lease, the operator may apply to the BLM to develop a specific well by submitting an application for a permit to drill (APD).<sup>41</sup>

The BLM has specific regulations that guide its issuance or denial of permits to drill for oil and gas. FLPMA provides: “The Secretary shall issue regulations necessary to implement the provisions of this Act with respect to the management, use, and protection of the public lands, including the property located thereon.”<sup>42</sup> Congress also requires that the Secretary “by regulation or otherwise, take any action necessary to prevent unnecessary or undue degradation of the lands”<sup>43</sup> in managing public lands. It is the responsibility of the authorized BLM officer to regulate a host of issues associated with oil and gas drilling quite apart from the HF rule specifically. As provided by BLM regulations, these responsibilities and authorities include, *inter alia*, approving and monitoring operator proposals for drilling, development, or production and ensuring that operations are conducted in a manner that is environmentally responsible, that protects life and property, and that results in the maximum ultimate recovery of the resource with minimum waste.<sup>44</sup> Drilling plans must include “a description of the program, the surface and projected completion zone location, pertinent geologic data, expected hazards, and proposed mitigation measures to address such hazards.”<sup>45</sup>

As discussed further below, the HF Rule’s requirements, which operate in addition to these other rules, will help to protect ground water, surface waters, and soils on public lands, thus supporting other current and future uses of BLM lands such as grazing and recreation. By preventing leakage from wells, the requirements will also help to prevent the waste of oil and gas, for which the federal government and states receive royalties.<sup>46</sup> Causing waste of oil and gas resources is prohibited by the MLA.<sup>47</sup>

### **III. The HF Rule addresses known risks, prevents the waste of valuable federal oil and gas resources, and is not overly burdensome.**

The HF Rule follows Congressional mandates by taking modest steps to address important environmental externalities of oil and gas development and hydraulic fracturing and preventing the waste of federal mineral resources. Slickwater and other unconventional fracturing techniques that have become

common in the past decade, thus necessitating updated BLM rules, use larger volumes of water<sup>48</sup> and in some cases different types of chemicals<sup>49</sup> than other fracturing techniques, and they introduce certain new environmental risks to the oil and gas development process. Beyond causing more wells to be drilled and fractured, sometimes in sensitive environments or more populous areas,<sup>50</sup> slickwater fracturing produces large volumes of liquid “flowback” waste that must be stored on the well site surface and disposed of<sup>51</sup> and requires large volumes of water to be trucked or piped to well sites.<sup>52</sup>

The techniques of hydraulic fracturing (including slickwater fracturing) and horizontal drilling have produced very important economic benefits but also substantial costs—costs that could be reduced through careful management of the drilling and fracturing process. Hydraulic fracturing chemicals, and chemicals mixed with water, have spilled on well sites.<sup>53</sup> Wells have blown out during hydraulic fracturing, causing fracturing fluids to be discharged into surface waters.<sup>54</sup> In its draft assessment of the impacts of hydraulic fracturing on water quality, the Environmental Protection Agency observes that “[s]pills of hydraulic fracturing fluids have occurred across the country and have affected the quality of drinking water resources,”<sup>55</sup> and it estimates that spill rates of chemicals and hydraulic fracturing fluid

range from 0.4 and 12.2 spills for every 100 wells.”<sup>56</sup> Flowback from wells has also leaked, polluting soil, surface water, and other resources,<sup>57</sup> and, in one incident identified by the EPA, flowback and produced water have polluted ground water.<sup>58</sup> Some fractured wells also have deficient or defective underground casing and cement,<sup>59</sup> and inspectors have detected methane coming out of these wells at the surface.<sup>60</sup>

The HF Rule addresses these and other externalities of oil and gas drilling and fracturing. By requiring data such as the geology where wells will be drilled and fractured, existing natural faults and fractures, old wellbores near the proposed well, nearby sources of usable water, and the proposed depth of the well and fractures,<sup>61</sup> the BLM will better understand (and be able to manage) how the drilling and fracturing of a well could potentially cause the leakage of methane or other substances into nearby faults or old wells—leakage that could potentially allow substances to migrate to the surface and impact surface water and soil in addition to underground resources.<sup>62</sup> By requiring monitoring of cementing operations, the preparation of cement evaluation logs where cement does not reach the surface of the well, and remedial action where it appears that cement is inadequate,<sup>63</sup> the HF Rule helps to ensure that wells—which will be subjected to high pressures as a result of hydraulic fracturing—will not leak, again helping to prevent the possible contamination of underground and surface resources. The portions of the HF Rule addressing the casing and cementing of wells also help to ensure that gas and oil will not escape wells and that water will not mix with oil and gas,<sup>64</sup> thus preventing the waste of valuable federal resources and

Peer-reviewed sources have estimated rates of well failure for all Marcellus wells to be 2.58%, 3.4%, or 6.2%. *See* Richard J. Davies, Sam Almond, Robert S. Ward, Robert B. Jackson, Charlotte Adams, Fred Worrall, Liam G. Herringshaw, Jon G. Gluyas & Mark A. Whitehead, *Oil and Gas Wells and Their Integrity: Implications for Shale and Unconventional Resource Exploitation*, 16 MARINE AND PETROLEUM GEOLOGY 239, 243 (2014) (comparing the estimates from peer-reviewed publications).

<sup>61</sup> Oil and Gas; Hydraulic Fracturing on Federal and Indian Lands, *supra* note 2, at 16,218-16,219.

<sup>62</sup> *See* Davies, *supra* note 60, at 240.

<sup>63</sup> Oil and Gas; Hydraulic Fracturing on Federal and Indian Lands, *supra* note 2, at 16,219-16,220.

<sup>64</sup> *See* GROUND WATER PROTECTION COUNCIL, STATE OIL AND NATURAL GAS REGULATIONS DESIGNED TO PROTECT WATER RESOURCES at 12, 19 (2009),

money earned from those resources. Further, by requiring the disclosure of chemicals used in fracturing,<sup>65</sup> the BLM helps to inform the public, including other users of public lands, of the chemicals that are stored on site and contained in the flowback. And the BLM achieves multiple environmental goals, including operator compliance with the Migratory Bird Treaty Act,<sup>66</sup> Bald and Golden Eagle Protection Act,<sup>67</sup> Clean Water Act (CWA),<sup>68</sup> and Resource Conservation and Recovery Act (RCRA),<sup>69</sup> by requiring tank storage of flowback.<sup>70</sup>

Furthermore, in balancing the importance of oil and gas development with other values on federal lands, including environmental protection, the rule is not overly onerous. As discussed in Part V, some states already require cementing tests that are more stringent than BLM rules. Further, many oil and gas operators already report a range of well data including fracturing chemicals used through FracFocus,<sup>71</sup> and some oil and gas operators already use tanks. For example, Encana reports: “In most of our operations, we use closed-loop fluid handling systems. . . . Because drilling and fracturing fluids do not come into contact with the ground surface, there is less likelihood of groundwater contamination.”<sup>72</sup>

#### **IV. No federal environmental statutes preclude or displace the HF Rule.**

In addition to having strong support in FLPMA and the MLA, the HF Rule is not precluded or displaced by other federal statutes that apply to, or exempt, some oil and gas activities from certain federal environmental regulations. The BLM has long regulated the casing and cementing of wells on federal lands,<sup>73</sup> among other regulations, and other federal statutes have not precluded these regulations—nor do these statutes now preclude the updated regulations. The relevant federal environmental statutes that apply to certain aspects of oil and gas development and fracturing are, *inter alia*, the Safe Drinking Water Act (SDWA), RCRA, the CWA, and the Emergency Planning and Community Right-to-Know Act (EPCRA). The SDWA applies to certain entities that inject substances underground and requires those entities to obtain a permit that ensures that injection will not endanger underground sources of drinking water.<sup>74</sup> The Act exempts from the definition of “injection” any hydraulic fracturing that is done without the use of diesel.<sup>75</sup> The EPA also exempts most oil and gas exploration and production (E&P) wastes from Subtitle C of RCRA—a subtitle that requires cradle-to-grave tracking of the generation, transport, and disposal of hazardous wastes and sets standards for transport and disposal.<sup>76</sup> Under the CWA, the EPA prohibits certain discharges of oil and gas wastes into surface waters<sup>77</sup> and has proposed to prohibit discharge of flowback from unconventional wells to certain wastewater treatment plants.<sup>78</sup> Finally, the

<sup>78</sup> Effluent Limitations Guidelines and Standards for the Oil and Gas Extraction Point Source Category, 80 Fed. Reg. 18557 (proposed Apr. 7, 2015).

EPCRA requires hydraulic fracturing operators to keep records of hazardous substances that are stored on site<sup>79</sup> but does not require these operators to annually report releases of these substances.<sup>80</sup>

The HF Rule does not conflict with any of these federal rules or exemptions. The rule is not precluded by other federal statutes and exemptions for three reasons. First, Congress includes limited, individual oil and gas exemptions in statutes that address different types of pollution and that are administered by different agencies. In providing these exemptions, Congress has not indicated an intent to preclude regulation by different agencies under different statutes. Second, environmental statutes are commonly structured to include discrete exemptions: Congress often exempts an activity from a statute knowing that the activity is or might be regulated under a different statute. Third, the purpose of the environmental statutes in question is primarily to limit the environmental externalities of certain private entity and local government activities without unduly limiting the productive use of private property; it is not to limit a federal agency's authority to manage *federally-owned and federally-managed* land in a manner consistent with its statutory mandate.

A. *Existing federal environmental statutes indicate no Congressional intent to exempt hydraulic fracturing, casing and cementing, or waste storage from BLM rules. Exemptions under various generally applicable environmental statutes do not exempt hydraulic fracturing activities from all federal regulation of federally-managed land.*

The question of whether one federal statute precludes the application of another (such as whether the SDWA precludes BLM regulation of oil and gas development and fracturing under FLPMA and the MLA) is one of congressional intent,<sup>81</sup> to be ascertained through statutory interpretation.<sup>82</sup> It is certainly within Congress's power to exempt hydraulic fracturing from all federal regulation; to date, however, it has (wisely) not chosen to do so,<sup>83</sup> and such a blanket exemption cannot be manufactured from the limited exemptions already in place. An exemption of an industrial activity from one federal environmental statute does not immunize that activity from other federal environmental statutes unless the statutory language clearly shows Congressional intent for such immunity.<sup>84</sup> Indeed, an exemption or partial exemption from one statute may promote effective regulation under another statute, thus making the laws complements.<sup>85</sup> The federal laws that partially apply to the subject matter of the BLM hydraulic fracturing rules, or that exempt hydraulic fracturing from certain aspects of federal law, do not show any intent to block federal agencies like BLM from regulating to accomplish their specific statutory mission.

In exempting hydraulic fracturing from the definition of "injection" under the SDWA, the Energy Policy Act of 2005 amends the SDWA to read as follows: "*For purposes of this part:* (1) Underground injection . . . (B) excludes-- . . . (ii) the underground injection of fluids or propping agents (other than diesel fuels) pursuant to hydraulic fracturing operations related to oil, gas, or geothermal production activities."<sup>86</sup> The Act simply makes clear that under the SDWA hydraulic fracturing is not an injection

<sup>82</sup> *POM Wonderful LLC v. The Coca-Cola Company*, 134 S.Ct. 2228, 2236 (2014).

<sup>83</sup> In their briefs opposing the BLM rule, petitioners quote one of my statements out of context. See Motion for Preliminary Injunction (Wyoming and Colorado) at 10, *Wyoming v. U.S. Dept. of the Interior*, No. 15-CV-00043-SWS (D. Wyo. May 29, 2015); Hannah Wiseman, *Untested Waters: The Rise of Hydraulic Fracturing in Oil and Gas Production and the Need to Revisit Regulation*, 20 *FORDHAM ENVTL. L. REV.* 115, 145 (2009)) (noting that "the Act conclusively withdrew fracturing from the realm of federal regulation" to indicate that Congress exempted hydraulic fracturing from the SDWA, but not to suggest that many other well development stages associated with fracturing, such as flowback disposal and discharge, are exempt from federal laws). Notably, my article also does not address the separate authority of the BLM to regulate fracturing on federal lands.

<sup>84</sup> Cf. *POM Wonderful*, 134 S.Ct. at 2236-2237 (in a case interpreting two federal food labeling statutes, refusing to adopt either a test that would require that full effect be given to each statute and only bar the application of one statute if there is irreconcilable conflict, or a test that would "reconcile" the laws by finding that one law narrows the other, but finding that even under the "reconciliation" test, the best result in the case was not to bar the application of a portion of one statute).

<sup>85</sup> Cf. *POM Wonderful*, 134 S.Ct. at 2238 ("When two statutes complement each other, it would show disregard for the congressional design to hold that Congress nonetheless intended one federal statute to preclude the operation of the other.").

<sup>86</sup> 42 U.S.C. § 300h(d)(1) (2012) (emphasis added).

activity that must be permitted by the EPA or states. It does not address how fracturing may or should be regulated under other acts or by other agencies. Furthermore, the SDWA's legislative history shows that Congress did not "intend any of the provisions of this bill to repeal or limit any authority," of the U.S. Geological Survey (USGS), one of the BLM's predecessors in regulating federal oil and gas wells.<sup>87</sup>

The SDWA is inapplicable to both drilling and fracturing of oil and gas production wells; it does not apply to the injection of substances like drilling muds and fluids and fracturing fluids underground, as these activities do not count as injection pursuant to the provision in the Energy Policy Act of 2005 and other provisions.<sup>88</sup> But states and federal agencies regulating oil and gas drilling and fracturing have other ways to ensure the safety of these practices. Therefore, many other acts, which I introduce above, address drilling, casing, and cementing of wells to ensure that substances do not leak underground and pollute surface and underground water. Many states regulate the casing and cementing of both fractured and conventional oil and gas wells—not under delegated SDWA authority, but rather under their independent regulatory authority to protect the public health, safety, and welfare.<sup>89</sup> Similarly, the BLM may regulate the casing of fractured and conventional wells to fulfill its MLA and FLPMA responsibilities, and, as indicated above, it has long regulated the casing of conventional wells and well stimulation.<sup>90</sup>

Additionally, the SDWA applies to the protection of drinking water and potentially usable water.<sup>91</sup> The Act indicates no intent to regulate fracturing and the cementing and casing of oil and gas wells for the purpose of preventing oil and gas waste and protecting soil and other surface resources, or wildlife. The BLM's rules for the casing and cementing of wells help to achieve all of these results.

Similarly, in exempting certain oil and gas E&P wastes from RCRA in 1988, the EPA indicated no intent to preclude regulation of these wastes under other acts, such as BLM's requirement under the HF Rule that flowback be stored in tanks. Indeed, the EPA indicated that it would rely on other acts like the SDWA (which applies to the disposal of liquid wastes from oil and gas wells, including fractured wells), the CWA, and subtitle D of RCRA, to help improve waste management.<sup>92</sup> Nor did the EPA in the RCRA exemption indicate an intent to prevent other entities from regulating these wastes under other Acts.<sup>93</sup>

With respect to the CWA, the EPA regulates oil and gas waste rather than exempting it, and the HF Rule and other BLM rules help operators comply with CWA rules, such as limits on flowback and produced water discharges.<sup>94</sup> Finally, with respect to chemical disclosure, the EPCRA already requires the maintenance of material safety data sheets for fracturing chemicals at oil and gas sites (with certain trade secret exemptions)<sup>95</sup> and does not indicate an intent to preclude other disclosure regulations implemented by other federal agencies.

*B. Federal environmental statutes are structured in a manner that anticipates that activities will be regulated under certain statutes and exempted from others.*

The argument that an exemption of an activity from one environmental statute exempts it from similar protections under other statutes administered by other agencies cuts against the very purpose of having

<sup>87</sup> H.R. REP. NO. 93-1185 at 32 (1974), as reprinted in 1974 U.S.C.C.A.N. 6454, 6494.

<sup>88</sup> States have argued that the SDWA is the only Act under which the injection of substances may be regulated based on one line from a federal case. That case states, "[I]t is clear that Congress dictated that *all* underground injection be regulated under the [SDWA]." *Legal Envtl. Assistance Found., Inc. v. U.S. Envtl. Protection Agency*, 118 F.3d 1467, 1474 (11th Cir. 1997). This statement does not indicate that *only* the SDWA may regulate underground injection. Rather, it indicates that all underground injection activities are subject to the SDWA. The case does not address whether underground injection activities might also be subject to other federal acts, particularly when injection occurs on federal lands.

<sup>89</sup> See Ground Water Protection Council, *supra* note 64; Wiseman, *Risk and Response*, *supra* note 49 (describing state casing and cementing regulations).

<sup>90</sup> See *supra* note 24.

<sup>91</sup> See, e.g., H.R. REP. NO. 93-1185, *supra* note 87, at 1 ("The purpose of the legislation is to assure that water supply systems serving the public meet minimum national standards for protection of public health.")

<sup>92</sup> Regulatory Determination, *supra* note 76, at 25,456.

<sup>93</sup> The EPA indicated that it would help the states improve their oil and gas waste regulations. Regulatory Determination, *supra* note 76, at 25,456. As discussed in Part IV of this testimony, state oil and gas regulations still vary and might leave gaps.

<sup>94</sup> 40 C.F.R. §§ 435.50, 435.52 (2013).

<sup>95</sup> 2 U.S.C. §§ 11021–11022 (2012); 29 C.F.R. § 1910.1200(i) (2013).

varied federal statutes that address discrete issues, as implemented by various agencies with various missions. For example, some discharges of waste do not count as “solid waste” under RCRA, which regulates the generation, transport, and disposal of waste, because these discharges are instead regulated under the CWA.<sup>96</sup> Indeed, certain environmental statutes contain an explicit “anti-duplication” provision; in one case a federal district court noted that the “the pollution discharges at issue in this case are exempted from the coverage of the Recovery Act because they are instead regulated by the Clean Water Act.”<sup>97</sup> In the oil and gas context, despite the RCRA subtitle C exemption for oil and gas E&P wastes,<sup>98</sup> an oil and gas operator that causes contamination of land with certain oil and gas E&P wastes is liable for the costs of clean-up under the Comprehensive Environmental Response, Compensation, and Liability Act.<sup>99</sup> And if the BLM is concerned that management of these wastes would contaminate these public lands and prevent their future productive use for grazing or other purposes (and generate CERCLA liability), it may regulate the management of these wastes under its FLPMA and MLA responsibilities.

*C. Federal environmental statutes aim primarily at private actors and do not comprehensively address the unique responsibilities of federal agencies to protect public natural resources.*

The CWA, SDWA, Clean Air Act, and other federal environmental statutes primarily address the many corporations and other entities that engage in profitable activity while also producing externalities in the form of pollution. These acts were not designed with the primary intent of addressing additional responsibilities of federal agencies managing activities that occur on *public* lands—lands that the agencies must manage for multiple uses for current and future generations. There are, as a result, numerous examples of activities that are exempt from at least one federal environmental statute but are regulated by the BLM. For example, the CWA exempts soil runoff from certain agricultural and timber harvesting operations from certain CWA requirements administered by the Environmental Protection Agency and states.<sup>100</sup> However, the BLM regulates soil runoff from farming, ranching, or certain timber harvesting to protect waters and federally-protected endangered species in those waters.<sup>101</sup> Indeed, a failure of the BLM to regulate the environmental impacts of these activities might violate Congressional directives for the agency, which require, *inter alia*, regulation of land use to protect environmental resources.<sup>102</sup> Similarly, a failure of the BLM to regulate the environmental impacts of oil and gas extraction on public lands, simply because certain aspects of oil and gas extraction are exempt from the SDWA, RCRA, and other federal acts, would be an abdication of the BLM’s statutorily-defined responsibilities on public lands.

**V. The HF Rule does not duplicate state regulations and will augment state regulation and enforcement in useful ways.**

In addition to providing important environmental protection and following statutorily-defined duties to enable multi-use development of public lands, the HF Rule beneficially augments state regulation of oil and gas development, including fracturing. The rule provides an important overlay above various (and

<sup>100</sup> *See* 33 U.S.C. § 1342(l) (2012) (exempting from the Clean Water Act National Pollutant Discharge Elimination System permitting requirement “silviculture activities,” including “harvesting operations,” and “agricultural return flows”); 33 U.S.C. § 1362(14) (2012) (exempting from the definition of a “point source” of pollution “agricultural stormwater discharges and return flows from irrigated agriculture”). These sources are regulated as nonpoint sources, particularly where a total maximum daily load has been established for a water into which the sources discharge.

<sup>101</sup> *See, e.g.*, Bureau of Land Mgmt., U.S. Dep’t. of the Interior, Draft Resource Management Plan/Environmental Impact Statement: Western Oregon at 3-908 (2015), *available at*, [http://www.blm.gov/or/plans/rmpswesternoregon/files/draft/RMP\\_EIS\\_Volume3.pdf](http://www.blm.gov/or/plans/rmpswesternoregon/files/draft/RMP_EIS_Volume3.pdf) (in management directions for forested lands and timber harvesting, prohibiting mechanical treatments on “steep slopes” or “sensitive soils” to protect “[p]erennial and fish-bearing streams”).

<sup>102</sup> *See supra* Part II of this testimony.

variable) state requirements. The portions of the HF Rule that are not more stringent than existing state and tribal regulations will likely not require variances<sup>103</sup> because BLM rules already serve as a floor, not a ceiling, to state rules.<sup>104</sup> And the HF Rule portions that are more stringent than state regulations protect important federal values without imposing a one-size-fits all approach. For example, if the BLM determines that well integrity was compromised during fracturing or that cement in the well was inadequate, a remediation strategy will be formed on a case-by-case basis.<sup>105</sup>

Several portions of the BLM rule demonstrate how the rule is more stringent than certain state requirements and less stringent than others, thus revealing the variability of state regulations that currently apply to oil and gas operations. For example, Colorado requires operators to run a cement bond log—a specific type of cement evaluation log—when operators use certain types of casing,<sup>106</sup> and New Mexico requires these logs in some counties.<sup>107</sup> Other states do not require these logs.<sup>108</sup> But in states where evaluation logs have been required, oil and gas development does not appear to have been inhibited.<sup>109</sup> Thus, the HF Rule provides a consistent requirement for fracturing on federal lands without imposing an unduly burdensome requirement.

In another example of a portion of the HF Rule that is equally as stringent as certain state regulations and more stringent than others, the rule (as discussed above) generally requires the use of tanks for the storage of flowback,<sup>110</sup> subject to certain exceptions. Colorado requires operators to use tanks for drilling and/or fracturing within a certain number of feet of a public water system,<sup>111</sup> and New Mexico allows pits but requires operators using pits to obtain a permit and to follow specific siting, construction, and operational guidelines for pits or tanks.<sup>112</sup> Although Utah does not appear to require tanks for flowback, the state requires oil and gas operators to “[m]aintain [flowback] tanks in a workmanlike manner that will preclude leakage and provide for all applicable safety measures . . . .”<sup>113</sup>

To the extent that portions of the HF Rule duplicate state or tribal requirements, operators have several options. A variance may be granted (or may be unnecessary) if the state or tribal rule meets or exceeds the objectives of BLM regulation. Further, because most of the HF Rule requirements are informational—requiring information about geology, fracturing chemicals used, and cement evaluation logs prepared, for example—operators can meet any duplicative state requirements by submitting the same information to the BLM and to the state or tribe.<sup>114</sup> Indeed, the HF Rule requires much of the information to be submitted through the website FracFocus, just as many states do. By inputting information into FracFocus, the operator will comply simultaneously with certain state, tribal, and federal requirements.

Just as the HF Rule provides consistent requirements for drilling and fracturing on federal lands above varied state requirements, the BLM’s enforcement resources can help complement what are often limited state enforcement resources. In a number of states, inspectors have done an admirable job of

<sup>103</sup> Oil and Gas; Hydraulic Fracturing on Federal and Indian Lands, *supra* note 2, at 16,221.

<sup>104</sup> Second Declaration of Steven Wells ¶ 22, Wyoming v. U.S. Dept. of the Interior, No. 2:15-CV-43-SWS (D. Wyo. June 12, 2015).

<sup>105</sup> Oil and Gas; Hydraulic Fracturing on Federal and Indian Lands, *supra* note 2, at 16,219-16,220.

<sup>106</sup> 2 COLO. CODE REGS. § 404-1:317(p) (2015).

<sup>107</sup> N.M. ADMIN. CODE R. §§19.15.39.8, 19.15.39.9 (2015).

<sup>108</sup> For example, Utah requires well completion or recompletion reports but does not appear to require a specific cement evaluation log. UTAH ADMIN CODE R. § 649-3-21 (2015). It appears that Wyoming only requires a description of the cementing program. WYO. RULES AND REGS., OIL GEN. CH. 3 § 8(c)(8).

<sup>109</sup> For natural gas wells alone, in 2014 Colorado had 32,371 producing gas wells, and New Mexico had 27,957 producing gas wells. Energy Info. Admin., Number of Producing Gas Wells, [http://www.eia.gov/dnav/ng/ng\\_prod\\_wells\\_s1\\_a.htm](http://www.eia.gov/dnav/ng/ng_prod_wells_s1_a.htm) (last visited July 5, 2015).

<sup>110</sup> Oil and Gas; Hydraulic Fracturing on Federal and Indian Lands, *supra* note 2, at 16,220.

<sup>111</sup> 2 COLO. CODE REGS. § 404-1:317B (2015).

<sup>112</sup> N.M. ADMIN. CODE R. § 19.15.17.9 (2015).

<sup>113</sup> UTAH ADMIN CODE R. § 649-3.1.2.4 (2015).

<sup>114</sup> For example, Wyoming (like the BLM in its HF Rule) requires information on the geologic formation into which well stimulation fluids will be injected, well stimulation design including anticipated pressures, the base fluid for fracturing, and chemicals used in fracturing. WYO. RULES AND REGS., OIL GEN. CH. 3 § 45(c)-(e) (2015).

visiting more well sites and noting potential violations of state laws at these sites in the midst of a drilling and fracturing boom. But state resources are limited, in part due to funding limitations. For example, in 2012 Colorado had approximately 36 oil and gas inspectors and 49,062 active conventional and unconventional oil and gas wells, whereas New Mexico had approximately 12 inspectors for 56,366 active conventional and unconventional wells.<sup>115</sup> The most important inspections occur during the drilling, completion, and fracturing of the well, and a far smaller number of wells are drilled, fractured, and completed each day than the total number of active wells listed. But active, producing wells, too, can cause environmental problems, such as leaking oil, condensate, or produced water from tanks<sup>116</sup> or from on-site equipment that does minimal processing.<sup>117</sup> Thus, inspectors' time must be split between wells being drilled, completed, and fractured and those under production, and enforcement resources are often thin. States often fund oil and gas enforcement programs through permitting fees and other fees, and where these fees are statutorily prescribed, they have in some cases not been adjusted for inflation for many years.<sup>118</sup> As a result of these and other state deficiencies, "[e]nforcement rates for spills and other shale gas waste pollution incidents are low, and the punishment may not be deterring risky behavior."<sup>119</sup>

While the BLM, too, has limited enforcement resources,<sup>120</sup> combining the expertise and resources of the BLM with states can help to ensure that wells on federal lands are regularly inspected and that violations—which can sometimes result from vandalism, weather, or other issues beyond the direct control of the operator—are quickly and effectively addressed. Between Fiscal Year 2007 and 2012, the BLM increased the number of environmental inspections of wells “by approximately 63 percent” and conducted a total of 17,866 environmental inspections in Fiscal Year 2012.<sup>121</sup>

## Conclusion

The BLM's HF Rule provides a needed update to federal oil and gas rules that have not kept up with rapid changes in U.S. oil and gas development. The BLM has long regulated the casing and cementing of wells, storage of oil and gas wastes, and provision of data to federal authorities to follow its statutory requirements—namely, to ensure that oil and gas development is compatible with other uses of federal lands for current and future generations and to protect water and environmental resource values, among other values. The HF Rule further achieves these goals. Primarily through informational requirements, the rule informs BLM officials about potential problems with wells, such as wells drilled in areas with old wells—which could pose a risk if fracturing intercepted other wells—and wells that have inadequate cement to secure casing and prevent leakage of substances from and into the well. The rule augments rather than conflicts with other federal requirements, fulfilling agency-specific mandates that are not contained within other federal environmental statutes. The HF Rule also complements and improves upon state requirements and provides a variance provision in the event that duplicative informational rules—which could simply require an operator to submit the same report to a state and federal official—are deemed onerous and unnecessary.

**Tom Fitzsimmons, PE,**  
**Commissioner, Wyoming Oil and Gas Conservation Commission**  
**COMMITTEE ON NATURAL RESOURCES**  
*“The Future of Hydraulic Fracturing on Federally Managed Lands”*

**July 15, 2015**

Chairman Lamborn, Ranking Member Lowenthahl and Members of the Committee: thank you for the opportunity to appear before you today.

I serve as a Commissioner on the Wyoming Oil and Gas Conservation Commission as well as Chairman of the Wyoming Enhanced Oil Recovery Commission. When not serving in these roles, I provide expert witness testimony in business and technical matters concerning the oil and gas industry. Prior to my involvement in the state commissions, I was actively involved in fracturing several hundreds of oil and gas wells as a producer and service provider. I have over 32 number years in the oil and gas industry in Wyoming, Montana and across the west.

The State of Wyoming, through the Wyoming Oil and Gas Conservation Commission (hereinafter WOGCC), has in place a comprehensive and time-tested hydraulic fracturing regulatory program. Implemented in 2010, Wyoming’s Hydraulic Fracturing rule has been modelled by other state regulatory agencies and has been referred to by the Secretary of the Interior as a “standard” for other states to follow. The Bureau of Land Management (BLM) hydraulic fracturing rule that was set to become effective last month is unnecessary and is a threat to our state’s economy.

**State Agencies are Best Suited to Manage Hydraulic Fracturing**

Successful regulatory oversight hinges upon a focused approach. As mentioned, Wyoming’s rule on hydraulic fracturing is comprehensive. From the Rule’s inception, it was designed to be robust. It requires disclosure and covers many aspects of well stimulation including, but not limited to, ground water protection through downhole design and testing and baseline groundwater testing for chemical additives. In addition, the WOGCC governs the recovery of resources so that oil and gas is optimally developed with the guiding principle and legislative mandate to avoid waste.

Wyoming’s cohesive team of industry experts reside in a single office overseen by the Commissioners, located in the center of Wyoming. The team, led by Oil and Gas Supervisor, Mark Watson is experienced, and efficient. The Wyoming team understands the regional oil and gas potential made possible through technologies such as enhanced oil recovery while balancing the needs of the environment and responsible development. In contrast, the BLM has 10 field offices located across many miles in Wyoming – each staffed to serve a wide variety of needs – but not focused to regulate hydraulic fracturing. This is not a condemnation of BLM staff, but rather an insight of the value in allowing the

states to apply a focused, local approach to regulation as opposed to disjointed federal agency lead by Washington DC that promotes a “one size fits all approach”.

BLM’s draft resource management plan for the Big Horn Basin contained, in my opinion, had two critical flaws when it was released. The flaws were: 1) the pipeline corridor infrastructure was not tied to adjoining basin pipeline corridors; and 2) the BLM failed to recognize almost 2.0 billion barrels of reserve potential through enhanced oil recovery. These flaws were errors of omission due to lack of focus, time and industry expertise in the agency at every level.

The lack of focus and expertise within the BLM results in long delays in the permitting process. Although the cost of permitting for a federal APD is 190 times higher than the cost of a state permit, it still takes two to five times longer to approve a federal APD. With the addition of the BLM’s Hydraulic Fracturing rule, we can only expect permitting delays to increase even more. Further, the lack of regulatory focus has many operators shifting their investment to fee and state managed minerals. As mentioned above the legislative mandate of the WOGCC is to minimize waste. Sparse development on federal minerals will result in waste. Promoting waste through developing more unnecessary bureaucratic “red tape” through unnecessary rules is not the way to best develop America’s abundance of oil and natural gas or maximize revenue for the federal government for the benefit of all American citizens.

### **Confusion in Regulatory Authority Results in Avoidance of Mineral Development**

Michael Madrid (BLM Deputy State Director for Minerals) testified before the Legislature’s Select Committee on Federal Natural Resource Management on July 9, 2015 in Cheyenne, WY. Mr. Madrid conceded that it would be very difficult to manage Hydraulic Fracturing rules by two agencies on the same well. We should listen to the people who are on the front line of this issue. Overlapping rules complicates development when the permitting and the reporting process are doubled. Other challenges that create confusion include;

The possibility exists for the BLM to disapprove a hydraulic fracture stimulation already approved by the WOGCC simply because portions of the Wyoming approved procedure may differ from the BLM rule even though certain portions of the Wyoming rule exceeded BLM requirements.

When it comes to chemical disclosure and trademark protection, Wyoming has a well-thought-out approach that allows service companies to prequalify their trade secret products before being used on a fracture treatment. Wyoming’s single application process is efficient for both the state and the industry. In contrast, the BLM process presents a risk to service companies that their proprietary information may be compromised if the trade secret status is rejected after the fact, leaving no recourse other than litigation to protect proprietary information.

Further, the BLM rules will require that the operator submit a new and complete trade secret request for each hydraulic-fracture-treatment, in which a trade secret protected product is used, even if they

have previously submitted numerous trade secret requests for that same product. This requirement places an unnecessary data management burden on all involved with no additional benefit. The objective of this requirement could be managed more efficiently. All of this uncertainty results in fewer companies willing to risk their investment on development of federal minerals. The economic impacts to the State of Wyoming and its cities, towns and counties will be profoundly negative and can be avoided.

### **Prevention of Waste is Vital**

The Wyoming Oil and Gas Conservation Commission is well known for its transparency of lease, production and well data presented on an easy to use web platform. This platform allows oil and gas operators to evaluate other offset wells and thus improve their practices. For example, this transparency enables an engineer to learn from competitors and improve well performance which results in higher ultimate recovery from future wells. The BLM's hydraulic fracturing rule fails to consider the need for combining fracture treatment data with production performance. This oversight will make it nearly impossible to analyze the large volumes of data associated with production and well construction.

### **HF Regulation Should be at State Level**

For all these reasons, the members of the Wyoming Oil and Gas Conservation Commission believe it has effective hydraulic fracturing regulations in place that are carried out by highly skilled professionals who solely focus on these important matters as public servants. Wyoming's state regulations aim to protect our environment, maximize recovery of resources and promote responsible development. In addition, our baseline water testing requirements and chemical additive disclosure regulations help ensure public safety. The BLM rule is unnecessary, lacks focus and fails to adequately promote responsible development. Wyoming has been a leader in the regulation of Hydraulic Fracturing. Wyoming's state rules were developed by industry, government, conservationists as well as other stakeholders working side by side to find the right balance. It is critical that the federal government defers jurisdiction to states with rules similar to Wyoming's to ensure timely development with reduced waste and confusion.

Thank you for the opportunity to appear before you today and I look forward to your questions.

Respectfully,

Tom Fitzsimmons  
Commissioner  
Wyoming Oil and Gas Conservation Commission

**Date:** Tuesday, July 14, 2015 11:33:45 AM

July 14, 2015

Dear Friend,

This past month the Supreme Court released two monumental decisions on the same sex marriage and the Affordable Care Act (ACA).

In *King v. Burwell*, the Supreme Court once again ruled that the ACA is constitutional, upholding that all Americans, no matter where they live, can access premium tax credits for quality, affordable health care. Since the ACA was passed, we have spent far too much time fighting over the law, both in Congress and in the courts. This ruling should settle once-and-for-all that the ACA is the law of the land. With this decision now behind us, and the ACA standing on firm constitutional ground, we need to begin working across the aisle to build on the law's important reforms so that all Americans can have access to quality, affordable health insurance.

Then, in a major victory for equality, the Supreme Court ruled that same-sex couples have a constitutional right to marry nationwide. People should be able to marry the person they love. Our country is a better and more equal place because of this ruling.

### Charleston Shooting

This past month, our nation also witnessed an act of pure hatred and evil in Charleston, South Carolina. Nine lives were cut short when a gunman opened fire during a bible study at an historic black church. I was proud to represent our district in Charleston, South Carolina as we honored those whose lives were tragically cut short in the horrific shooting.

This is a time to mourn the victims, to pray for their families, and for a community to heal. It's also time for Congress to come to grips with the fact that the unchecked and widespread gun violence we too often see in our country is both unacceptable and preventable.

30-plus people are killed every day by someone using a gun. Mass shootings are becoming almost commonplace. And yet we continue to do nothing. No legislation will stop every tragedy. But passing commonsense gun laws will at least stop some.

We should start by expanding background checks. It's our first line of defense against criminals & the dangerously mentally ill getting guns. A recent poll released by Public Policy Polling indicates that Americans want commonsense laws that keep guns away from criminals and the dangerously mentally ill. In fact, 90 percent of those polled support criminal background checks.

We don't know what laws, if any, could have prevented the shooting in Charleston. But we do know that every day background checks stop more than 170 felons and some 50 domestic abusers from buying a gun. We know they help keep guns from dangerous people – and that saves lives.

It's time to bring commonsense, bipartisan reforms like my bill to expand criminal background checks up for a vote.

### Events and News around the District

This month, I had the special honor of presenting long overdue service medals to fellow Vietnam veterans James Hilderbrand of Benicia and John Allen of Santa Rosa. James served in the Air Force where he was assigned to U-Tapao Air Base, Thailand to support combat missions flown into Vietnam from 1971-1973. John joined the Navy in 1967 and was in Vietnam in 1969 during which time he served on three ships – two ships which were in the rivers of Vietnam and a repair ship. Many thanks to James, John, and all of our veterans for their brave service.

I also had an excellent time at the Napa Valley Horsemen's Association Mustang Day. This is a special community event where families and children can come see some beautiful horses, learn a little history and have a lot of fun. Many thanks to the Napa Valley Horsemen's Association – the oldest running horse club in California – for all of their work. This Mustang Day is unique for two reasons. First, this is the first time that the Mustangs themselves were available for adoption in Napa. And second, the training the Mustangs have received is one-of-a-kind. Through a partnership between the Bureau of Land Management and the Sacramento County Sherriff's office, inmates at Rio Cosumnes Correctional Center take wild horses and provide them with initial training. Through this training they make the animals easier to handle for adopters. Not only does this program provide inmates with job skills that translate to the outside world, it helps make sure horses are adoptable, can find good homes, and have good lives.

Once again, Martinez's King of the County BBQ was fantastic. Many thanks to all those who make this wonderful community event possible.

I attended the [Congressional Sportsmen's Foundation](#) 2nd Annual 'California Wine, Wings & Wildlife,' event in Sonoma County. As an outdoorsman and two-time chair of the Congressional Sportsmen's Caucus, the foundation is close to my heart. They care deeply and work tirelessly to protect our outdoor traditions by preserving our open spaces, and I am proud to support their efforts. I also attended the California Waterfowl 24th Annual Rodeo/Crockett Steak & Prawn Feed about the importance of preserving our outdoor heritage. Many thanks to all of those who came out to support our conservation efforts, and to California Waterfowl for honoring all the veterans in attendance. This is my first waterfowl event since becoming the first representative on the Migratory Bird Commission from the Pacific Flyway.

I had the great pleasure of presenting a U.S. Flag flown over the Capitol in Washington, D.C. to NASCAR star and Vallejo's own Jeff Gordon. Many thanks to Jeff for all he does to give back to our community.

I was proud to be a part of Vallejo's annual Juneteenth celebration, a wonderful event that commemorates Emancipation Day, Freedom Day, and the first victory in a long fight towards equality that we are still waging today. I will continue working with people in our community to make sure all Americans have equal opportunities to vote, to graduate, get a job, buy a house and save for retirement, and to walk through their communities without becoming a victim of violent crime or the target discrimination.

It was an honor to attend the Scholarship Gala hosted by the Sonoma County Hispanic Chamber of Commerce. Congratulations and thank you to the Sonoma County Hispanic Chamber of Commerce and everyone who helped make the event a wonderful success. Special thanks to the Diaz brothers of McFarland USA fame for being there to share their story with all of us. The brilliant, and sure to be successful, scholarship recipients will make us all proud!

It was a pleasure to tour two businesses in the district, Benicia Fabrication & Machine Shop and Rankin Performance Machine in Martinez. Benicia Fabrication & Machine Shop is a great business in our district specializing in the repair, maintenance and new construction of pressure vessels, heat exchangers, and other industrial equipment. Rankin Performance Machine is a full-service engine restoration machine shop. Thank you to our local businesses and all they do for our community.

Finally, it was a great honor to celebrate 10 years of fantastic work by the Children’s Health Initiative (CHI), who is working to achieve 100 percent, universal health care coverage for kids in Napa County. In the last ten years, CHI successfully completed more than 16,000 health insurance applications – increasing enrollment for previously uninsured Napa County children by nearly 80 percent. Every year, CHI successfully enrolls 1,500 new children and re-enrolls 4,500 children. Not only is this great for our kids, it’s great for our economy and broader health care costs. Had these children been uninsured, it would have cost our community \$27 million in uncompensated care. Congratulations to CHI on 10 years of outstanding work.

## My Legislation

As chair of the House Gun Violence Prevention Task Force, I introduced the *Safer Communities Act of 2015* (H.R. 2994), legislation aimed at reducing and preventing gun violence by keeping guns away from people we all agree should not have them. While those suffering from mental illness are far more likely to be victims than perpetrators of violent crimes, we must recognize that improving our mental health system, and keeping firearms from those with other risk factors such as a history of substance abuse disorders and violence, goes hand-in-hand with reducing and preventing gun violence. By improving intervention services, boosting evidence-based research, and giving our law enforcement officers more tools to get guns out of dangerous hands, we can make our country safer and get people the help they need, while also respecting the rights of law-abiding gun owners.

This month, along with Paul Gosar (R-AZ), Trent Franks (R-AZ), Joe Heck (R-NV), Jared Polis (D-CO) and Raul Ruiz (D-CA), I introduced bipartisan legislation called the *Public Lands Renewable Energy Development Act* that would remove unnecessary red tape and streamline renewable energy projects on public lands. This bill will help put Californians back to work and further support an all-the-above energy approach.

Additionally, I introduced the *Medicare Secondary Payer and Workers' Compensation Settlement Agreement Act*, which is intended to protect injured workers whose compensation claims overlap with Medicare coverage. Unfortunately, these claims are frequently subjected to lengthy and roundabout reviews by the Centers for Medicare and Medicaid Services (CMS) to determine appropriate amounts to pay for future medical costs. Bureaucratic red-tape shouldn't keep hardworking Americans from getting the money they need to cover their costs following a work-related injury. Injured workers deserve peace of mind and the system needs to work quickly and seamlessly.

I also re-introduced bipartisan legislation to level the energy playing field by giving investors in renewable energy projects access to a corporate tax structure that is currently available only to investors in fossil fuel-based energy projects. By treating renewable energy the same way we do oil and gas, we can create jobs, strengthen our national security, reduce our dependency on foreign oil and move closer to energy independence.

I introduced H.R. 2948, the Medicare Telehealth Parity Act of 2015. The bipartisan legislation will expand coverage of telehealth services under Medicare by putting them on the path toward parity with in-person health care visits. By passing this commonsense bill we can expand telehealth services and make sure the best care and the best treatments are available to all Americans, no matter where they live.

Finally, I introduced the *Furthering Access to Stroke Telemedicine (FAST) Act*, which expands access to stroke telemedicine (also called "telestroke") treatment in Medicare. This bill will save lives by allowing stroke patients to be treated quickly via telemedicine no matter where they are located.

### **This Month in Congress**

This month, the State of South Carolina removed the Confederate battle flag from its Capitol grounds. I commend the state legislators for this bold step. Unfortunately, House Republicans in Washington, D.C. are moving in the opposite direction by offering legislation that would preserve this racist flag on our federal lands. The Confederate battle flag is a symbol of hatred and division. It has no place in our society.

On June 18h, I voted NO on the House's Trade Promotion Authority legislation. American workers deserve a stronger deal than the "fast track" bill that passed the House. We should do all we can to grow exports because it means more jobs, but it cannot be done at the expense of American workers, health and safety, and the environment. I will continue pushing for a strong, fair trade deal that grows our economy and creates good American jobs.

I was honored, along with Scott De Leon of the Lake County Water Resources Department, at the second annual Reduce Risks from Invasive Species Coalition (RRISC) Congressional Reception and Awards Program. I received the "Outstanding Leadership by an Elected Official in Protecting America's Environment and Energy Award" while Scott received the "Outstanding Achievement by a Local Government Agency" award.

I spoke outside the U.S. Capitol about the importance of the Land and Water Conservation Fund (LWCF), which expires in less than 100 days. Since the program was established 50 years ago, \$10 million of LWCF funds have protected more than 18,000 acres of land in our district alone, providing recreational opportunities, supporting outdoor recreation and tourism, protecting critical habitat for endangered species,

and preserving pristine habitats for future generations to explore. Congress shouldn't let the sun set on this important program.

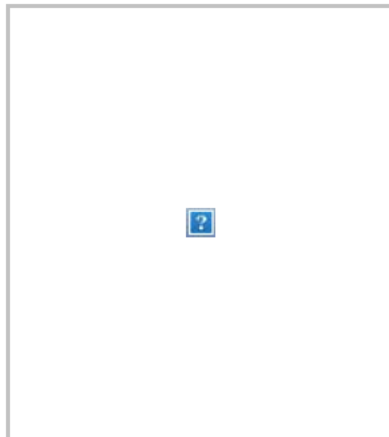

### **Important Funds for our Communities**

This month, I was pleased to announce a \$730,000 water conservation grant for Los Carneros Water District. The grant will go towards funding the water district's Irrigation Efficiency Partnership Project, which will help conserve water during one of the most severe droughts in our state's history. The grant will fund projects designed to help users avoid waste and increase efficiency, such as the installation of technologically advanced metering, monitoring and reporting systems.

Additionally, I announced a \$10,856,088 U.S. Department of Health and Human Services (HHS) grant for Child Start, Inc., which will be used to provide Head Start and Early Head Start services to children and families throughout Napa and Solano Counties. The services provided through Child Start, Inc. make sure our kids have a foundation for success that's rooted in education and strong, healthy development. I am proud to support Child Start, Inc. and this grant which will allow them to continue doing great work in our community.

### **Final Word**

I hope everyone had a happy and safe Independence Day. It was great seeing so many people in our community at parades in Penngrove, Hercules, Napa and Benicial

As always, it is a privilege to represent the district I am fortunate enough to call my home. Thank you for staying updated and please look for my newsletters in the months to come.

Sincerely,

All,

Attached is the BLM's testimony for tomorrow's oversight hearing on, "The Future of Hydraulic Fracturing on Federally Managed Lands."

Thank you,  
Jill

**Statement of  
Neil Kornze  
Director  
Bureau of Land Management, U.S. Department of the Interior  
House Natural Resources Committee  
Subcommittee on Federal Lands**

**“Bureau of Land Management’s Final Hydraulic Fracturing Rule”**

**July 15, 2015**

Chairman McClintock, Ranking Member Tsongas, and Members of the Subcommittee, thank you for the opportunity to discuss the Bureau of Land Management’s (BLM) final hydraulic fracturing regulations and their application to Federal, tribal, and Indian trust mineral resources. The BLM oil and gas program’s highest priority is ensuring that the operations it authorizes on public and tribal lands are safe and environmentally responsible. This rule is critical to meeting that responsibility as we continue to offer millions of acres of public land for minerals development each year.

The BLM’s rule establishes a consistent set of requirements designed to prevent problems in these complex hydraulic fracturing operations before they occur. It also will provide as much information as possible to the public about these operations that affect their public lands. The goals of the rule – safe and environmentally responsible operation and resource protection – are goals that we know the BLM shares with industry, states, tribes, and the American public. The expertise brought to these issues by those who participated in the rulemaking process was essential to producing a rule that will achieve these goals, and we are very appreciative of the time and skill invested by all concerned.

**Background**

The BLM is responsible for protecting the resources and managing the uses of our nation’s public lands, which are located primarily in 12 western states, including Alaska. The BLM administers more land – over 245 million surface acres – than any other Federal agency. The BLM also manages approximately 700 million acres of onshore Federal mineral estate throughout the nation, including the subsurface estate overlain by properties managed by other Federal agencies such as the Department of Defense and the U.S. Forest Service. In addition, the BLM, together with the Bureau of Indian Affairs (BIA), provides permitting and oversight services under the Indian Mineral Leasing Act of 1938 to approximately 56 million acres of land held in trust by the Federal government on behalf of tribes and individual Indian owners. The BLM works closely with surface management agencies, including the BIA and tribal governments, in the management of these subsurface resources. We are also mindful of our agency’s responsibility for stewardship of public land resources and Indian trust assets that generate substantial revenue for the U.S. Treasury, the states, tribal governments, and individual Indian owners.

In support of President Obama’s balanced approach to energy, the BLM is committed to promoting safe, responsible, and environmentally sustainable domestic oil and gas production in

a manner that will protect consumers, human health, and the environment, and reduce our dependence on foreign oil.

In Fiscal Year (FY) 2014, onshore Federal oil and gas royalties exceeded \$3 billion, approximately half of which were paid directly to the states in which the development occurred. In FY 2014, tribal oil and gas royalties exceeded \$1 billion with all of those revenues paid to the tribes or individual Indian owners of the land on which the development occurred.

The BLM works diligently to fulfill its role in securing America's energy future, coordinating closely with partners across the country to ensure that development of oil and gas resources occurs in the right places and that those projects are managed safely and responsibly. In recent years, the BLM has overseen a significant increase in oil production from public lands, while also supporting continued natural gas production. Oil production from Federal and Indian lands in 2014 rose twelve percent from the previous year and is now up 81 percent since 2008 – 113 million barrels per year in 2008 to 205 million barrels per year in 2014. For comparison, nationwide oil production over the same period increased 73 percent. The BLM continues to make public lands available for oil and gas development in excess of industry demand. Additionally, today the BLM has responsibility for more than 100,000 existing oil and gas wells.

### **Hydraulic Fracturing Technology**

Hydraulic fracturing involves the injection of fluid under high pressure to create or enlarge fractures in the rocks containing oil and gas so that the fluids can flow more freely into the wellbore and thus increase production. The number of wells on BLM-managed public lands and on Indian lands that are stimulated by hydraulic fracturing techniques has increased steadily in recent years. Of wells currently being drilled, over 90 percent use modern hydraulic fracturing techniques for well completion.

These new well completions are typically significantly more complex than the wells drilled in the past. Modern hydraulic fracturing operations are often considerably deeper and coupled with relatively new horizontal drilling techniques to create greater wellbore volume in the reservoir, unlike those that occurred in the past which were used on a relatively small scale, to complete or to re-complete wells. The increasingly common combination of long lateral wellbores with the types of hydraulic fracturing used today has facilitated larger-scale operations that allow greater access to oil and gas resources in shale, tight gas, coalbed methane and conventional reservoirs across the country, sometimes in areas that have not previously or only recently experienced significant oil and gas development

### **Hydraulic Fracturing Rulemaking Considerations**

The Mineral Leasing Act of 1920 (MLA), as amended, directs the Secretary of the Interior to lease Federal oil and gas resources, and authorizes her to regulate the resulting oil and gas operations on those leases. The BLM has used this authority to develop regulations governing all aspects of oil and gas operations, including requirements related to surface-disturbing activities, production measurement, and well construction. The Indian Mineral Leasing Act extends this regulatory authority and the resultant rules to Indian oil and gas leases on trust lands (except those lands specifically excluded by statute). Finally, the Federal Land Policy and Management Act of 1976 (FLPMA) directs the BLM to manage the public lands using the

principles of multiple use and sustained yield and to take any action necessary to prevent unnecessary or undue degradation. In fulfilling these objectives, FLPMA requires the BLM to manage public lands in a manner that protects the quality of their resources, including ecological, environmental, and water resources. On net, this statutory regime requires the BLM to balance responsible development with protection of the environment and public safety. The BLM works hard to ensure the appropriate balance is struck and that the applicable regulations and requirements are applied and enforced fairly and consistently across all the lands where the BLM has oversight responsibilities.

Prior to the issuance of the hydraulic fracturing rule, the BLM rules applicable to hydraulic fracturing were last updated over 30 years ago, and had not kept pace with the significant technological advances in hydraulic fracturing techniques and the tremendous increase in its use. The new rule is the culmination of four years of work by the BLM that began in November 2010 when it held its first public forum on this topic. Since that time, the BLM has published two proposed rules and held numerous meetings with the public and state officials, as well as many tribal consultations and meetings. The public comment period was open for a cumulative period of more than 210 days, during which time the BLM received and analyzed comments from more than 1.5 million individuals and groups. During this period, the BLM also studied state and tribal regulations, and consulted with state and tribal agencies, industry, and the public, including communities affected by oil and gas operations.

### **Hydraulic Fracturing Rule Requirements**

Informed by the experience of its experts and the technical expertise and concerns of state regulators, tribes, industry, and the public, the BLM's hydraulic fracturing rule strengthens its existing oversight procedures and provides all stakeholders with additional assurance that operations are being carried out safely and responsibly.

Key components of the rule include provisions for ensuring the protection of groundwater supplies through requirements related to wellbore integrity. These include the placement of competent cement barriers between the wellbore and any potentially usable water zones through which the wellbore passes, which protects groundwater both from hydraulic fracturing fluids during drilling and from hydrocarbon contamination during production. The rule requires the interim storage of recovered waste fluids from the hydraulic fracturing operation in tanks, unless, under certain restrictive circumstances, specific approval for the use of pits has been granted to the operator, in order to minimize the potential for produced water spills that puts soil, water, and wildlife at risk. Additional measures requiring companies to submit more detailed information on the geology, depth, and location of pre-existing wells prior to drilling will lower the risk of cross-well contamination, which has become more prevalent as the use of horizontal drilling has significantly increased. To increase transparency, as much of this information as possible will be made available to the public. Finally, the rule requires companies to publicly disclose information about the chemicals used in their hydraulic fracturing processes on public lands within 30 days of completing the operations, subject to exceptions for information demonstrated to be a trade secret. Any information claimed to be a trade secret can be obtained by BLM for review of that claim.

These requirements were developed based on BLM's experience and technical expertise and work done by states, tribal authorities, and industry. During the four years the BLM spent preparing the rule, it benefited from the expertise of state and tribal regulators, and many provisions of the final rule reflect existing state standards. None of these requirements impose undue delays, costs, or procedures on operators.

### **Work with States & Tribes**

The BLM has established and maintained regulations governing oil and gas operations on public lands for decades, and has worked successfully with operators, tribes and state governments to avoid duplication and delay in the enforcement and monitoring of these regulations. The ultimate implementation of the hydraulic fracturing rule will continue this longstanding practice while also ensuring the BLM satisfies its obligations to ensure federal standards are met. As explained above, the rule builds upon and updates the BLM's existing regulations to address an evolving technology, in order to provide consistent parameters for the conduct of hydraulic fracturing operations on BLM-managed public lands nationwide and Indian trust lands.

Of the 32 states with the potential for oil and gas development on federally managed mineral resources, slightly more than half have rules in place that address hydraulic fracturing, and those rules vary widely from state to state. Recognizing the expertise and experience that state and tribal authorities possess and consistent with its standard practice of ensuring the efficient implementation of its rules, the BLM had been working with states and tribes that have standards in place for hydraulic fracturing that meet or exceed those set by the BLM's rule to establish variances from those aspects of the BLM rule. That work has temporarily paused as a result of the litigation explained below. Following BLM approval of a variance, the BLM will enforce the specific state or tribal standard as part of its hydraulic fracturing regulatory program. In addition, the BLM will continue its coordination with states and tribes to establish or review and strengthen existing agreements related to oil and gas regulation and operations.

The BLM's overall intent for these coordination efforts is to minimize duplication and maximize efficiency, while also ensuring the applicable federal standards are met. As this rule is implemented, the BLM will continuously work with states, tribes, and operators to maximize coordination and efficiency.

### **Implementing the Rule**

The rule is expected to cost industry about \$11,400 per hydraulic fracturing operation on average, which equates to no more than one-quarter of one percent of the cost of drilling a well. This is a modest cost considering the typical hydraulically fractured well costs between \$5-10 million to develop, the public interest in ensuring that these operations are conducted in an environmentally sound and safe manner, and in light of the high cost of remediating contaminated aquifers. The BLM is aware that industry, states, tribes, and the public share the same goal of safeguarding local communities, water quality, wildlife, and other resources from potential harm. For this reason, the BLM rule not only incorporates requirements from existing state and tribal rules, but industry best practices as well. In many cases, operators have voluntarily undertaken the best practices reflected in the BLM's rule. The rule ensures that those practices are maintained and adopted by all. As a result, the rule achieves a cost-effective path

towards consistent permitting requirements and disclosure protocols for hydraulic fracturing operations.

The BLM has been taking a number of steps both internally and externally to prepare for the implementation of the rule in advance of its scheduled effective date. Internally, recognizing the central role wellbore integrity plays in maintaining safe operations, the BLM partnered with the Society of Petroleum Engineers to add more technical training for the BLM's engineers that emphasizes cementing and other critical aspects of hydraulic fracturing operations. The BLM will continue to offer, develop and refine these technical training modules.

Externally, the BLM has undertaken outreach efforts to states, operators, trade associations, and other interested stakeholders. The BLM State Offices have been meeting with their state counterparts, undertaking state-by-state comparisons of regulatory requirements in order to identify opportunities for variances, and to establish Memorandums of Understanding (MOUs) that will realize efficiencies and allow for successful implementation of the rule. To date, the BLM has had discussions with: the North Dakota Industrial Commission; the Wyoming Oil and Gas Commission; and the states of Alaska, California, Colorado, New Mexico, Nevada, and Utah. The BLM also gave a presentation on the rule this past May at the Interstate Oil and Gas Compact Commission's meeting. As discussed above, some activities that would actually implement the rule have been temporarily paused as a result of litigation, but BLM intends to resume them at the appropriate time.

Similarly, communication with industry has also been ongoing, but has been paused to the extent consistent with the Court's order. Our offices have reached out to local or regional industry organizations and local operators to address their questions related to the implementation process. On April 7, 2015, BLM Washington hosted a nationwide industry outreach session that over 200 people participated in to explain the rule and answer questions about its implementation. Since that time, similar sessions have been held or set up at the local level. BLM State and Field Offices have coordinated and held training opportunities with associations representing producers in Wyoming, Utah, Colorado, Montana, and North Dakota. Finally, we are also working closely with the Ground Water Protection Council (GWPC) to finalize a MOU that will ensure that the chemical disclosures provided by industry can be easily searched and downloaded from the GWPC's publicly available hydraulic fracturing database, FracFocus.

### **Legal Challenges to the Rule**

As you know, two industry associations (Independent Petroleum Association of America and the Western Energy Alliance) and a number of the States (Wyoming, Colorado, North Dakota, and Utah), and the Ute Tribe of the Uintah and Ouray Reservation have challenged the rule in the U.S. District Court in Wyoming. The Sierra Club and five other environmental organizations have intervened in that litigation to defend the rule. A separate suit was filed by the Southern Ute Indian Tribe in the U.S. District Court in Colorado. These suits are still in the early phases, and we are vigorously defending the rule and strongly believe it is clearly and fully consistent with the applicable legal authorities and consistent with the BLM's statutory obligations.

In the Wyoming litigation, the court held a hearing on June 23, 2015, on the motions of several of petitioners for a preliminary injunction. At the end of six and a half hours of testimony and argument, the court did not issue a preliminary injunction against the rule. The court did, however, postpone the effective date of the rule until the administrative record is filed by the BLM, the parties annotate their briefs with citations to the record, and the court has time to render a decision on the preliminary injunction motions. In the Colorado litigation, the court has denied the Southern Ute tribe's motion for a temporary restraining order, and has set a schedule for litigation going forward.

The BLM has been working diligently with other offices of the Department and with a contractor to prepare and file the administrative record with the Wyoming and Colorado courts, which is currently due to be filed on July 22, 2015, and August 24, 2015, respectively. In the meantime, the rule remains on hold consistent with the Wyoming Court's order until record is filed.

### **Conclusion**

The BLM's hydraulic fracturing rule provides a much-needed update to the BLM's existing regulations. It establishes commonsense standards governing modern hydraulic fracturing operations that reflect the technological advancement of the process over time. It also provides opportunities for the BLM to coordinate standards and processes with States and Tribes to reduce administrative costs and improve efficiency. These new regulations are essential to our efforts to protect the environment and local communities, while also ensuring the continued conscientious development of our federal oil and gas resources. Thank you for the opportunity to present this testimony. I will be pleased to answer any questions you may have.

## Democrats Dismantle Flawed Republican and State Arguments Against BLM Fracking Rule, Highlight Intentional Misquotes

**July 15, 2015**

Media Contact: Adam Sarvana  
(202) 225-6065 or (202) 578-6626

*Washington, D.C.* – At today’s Subcommittee on Energy and Mineral Resources hearing on the Bureau of Land Management’s (BLM) final rule for hydraulic fracturing operations on Federal and Indian lands, Subcommittee Ranking Member Alan Lowenthal, Full Committee Ranking Member Raúl M. Grijalva and multiple witnesses rebutted fracking rule opponents’ misleading arguments and stressed that the rule would have no impact on states with stronger fracking standards.

“The oil and gas industry is making a big deal out of nothing,” Grijalva said ahead of the hearing. “State regulations in Utah, Colorado, Wyoming and North Dakota are already stronger than BLM’s, as they pointed out in court arguments, so companies in those states can go on with business as usual. The BLM rule is so lenient that companies should be thanking BLM for issuing it. Our focus should be on the American people whose air and water are at risk of contamination, not on whether industry is getting enough special deals. House Republicans are looking out for fracking profits instead of public health and misrepresenting the debate to benefit corporate interests. It has to stop.”

States challenging the BLM fracking rule in federal court have argued that the BLM does not

have the authority to regulate fracking because of the “Halliburton loophole” inserted by Republicans in the Energy Policy Act of 2005, which exempts most hydraulic fracturing from regulation under the Safe Drinking Water Act. To make their case, states have pointed to remarks from Florida State University Professor Hannah Wiseman and then-Rep. Edward J. Markey (D-Mass.).

At today’s hearing, Wiseman said the states have taken a single line from one of her articles out of context and reiterated that the BLM’s fracking rule “has strong statutory authorization, is not precluded by other statutes, addresses known risks, and usefully complements state regulation.”

In a statement today, Sen. Markey also directly challenged the states’ interpretation of comments he made in 2005: “Only the oil industry could try to argue that the Halliburton loophole to exempt hydraulic fracturing under the Safe Drinking Water Act is not large enough. Congress didn’t write a get-out-of-any-regulation-forever-free card for fracking. Any attempt to extract any other reading out of the Congressional Record clearly fractures credulity.”

In opening remarks at today’s hearing, Ranking Member Lowenthal stated that the BLM rule “is nothing but a modest modernization of longstanding BLM regulations to take into account how the industry currently operates. [ . . . ] On federal lands, BLM sets the floor. The states are free to put the ceiling wherever they want. And, yes, even on federal lands companies must meet those state standards.”

BLM Director Neil Kornze, a witness at the hearing, pointed to BLM’s longstanding authority to regulate oil and gas on public lands, which dates back to 1920, and stated in written testimony that BLM’s existing fracking rules “were last updated over 30 years ago, and had not kept pace with the significant technological advances in hydraulic fracturing techniques and the tremendous increase in its use.”

He pointed out that under BLM’s oversight, oil production from Federal and Indian lands is [up 81 percent](#) since 2008.

Good Afternoon LA's,

Attached please find this week's hearing memos from the Natural Resources Democrats. Includes:

- Full Committee Oversight Hearing on **Wednesday July 22<sup>nd</sup> at 10:00 AM in Longworth 1324** on: *"An Analysis of the Obama Administration's Social Cost of Carbon"*
- Indian, Insular and Alaska Native Affairs Subcommittee Legislative Hearing on **Wednesday July 22<sup>nd</sup> at 2:00 PM in Longworth 1334** on the following bills:
  - [H.R. 1880](#) (Rep. Michelle Lujan Grisham), To require the Secretary of the Interior to take into trust 4 parcels of Federal land for the benefit of certain Indian Pueblos in the State of New Mexico. *"Albuquerque Indian School Land Transfer Act"*
  - [H.R. 2388](#) (Rep. Don Young), To reverse the designation by the Secretary of the Interior and the Secretary of Agriculture of certain communities in the State of Alaska as nonrural. *"Subsistence Access Management Act of 2015."*
- Federal Lands Subcommittee Oversight Hearing on **Thursday July 23<sup>rd</sup> at 10:00 AM in Longworth 1324** on: *"New and Innovative Ideas for the Next Century of Our National Parks"*
- Water, Power and Oceans Subcommittee Legislative Hearing on **Thursday July 23<sup>rd</sup> at 10:30 AM in Longworth 1334** on the following bills:
  - [H.R. 564](#) (Rep. Herrera Beutler), *"Endangered Salmon and Fisheries Predation Prevention Act"*
  - [H.R. 1772](#) (Rep. Carney), *"Delaware River Basin Conservation Act of 2015"*
  - [H.R. 2168](#) (Rep. Herrera Beutler), *"West Coast Dungeness Crab Management Act"*

Please remember that these memos are for the use of Committee Democratic Members and their staff only.

As a reminder, the Natural Resources Democratic Staff will be holding *our weekly LA briefing today at 4:00 PM in Longworth 1334.*

Thank you.

**RE: OVERSIGHT HEARING – July 23, 2015**

---

On **Thursday, July 23, 2015 at 10:00 a.m. in room 1324 Longworth House Office Building**, the Subcommittee on Federal Lands will hold an oversight hearing entitled, “*New and Innovative Ideas for the Next Century of Our National Parks.*”

**Witnesses**

John Nau, Vice Chairman  
National Park Foundation, Board of Directors

Derrick Crandall, Counsellor  
National Park Hospitality Association

Jim Fram, President and CEO  
Greater Hot Springs Chamber of Commerce

Craig Obey, Senior Vice President  
National Parks Conservation Association

**Background**

This hearing is billed as a conversation about innovative ways to fund and operate the National Park System. With the upcoming Centennial in 2016, the majority wants to explore “Big Ideas for America’s Best Idea” with an eye on identifying methods to increase revenue from private and non-traditional sources.

Drawing nearly 300 million visitors each year, America’s national parks are a source of pride all over the country, but they have been chronically underfunded for years, leading to aging infrastructure in need of investment and repair. In fact, the National Park Service’s (NPS) budget, as appropriated by Congress, has declined by 22%, or approximately \$500 million in today’s dollars, over the past ten years. Declining appropriation outlays have led to an increasing backlog of maintenance projects, which has recently been estimated at approximately \$11.5

billion. Nearly \$6 billion of the backlog consists of paved roads and other transportation infrastructure managed by NPS. While Congress has failed to adequately invest in the future of NPS, the investment in parks continues to have a significant economic impact. In 2013 alone, visitors to national parks spent \$14.6 billion in gateway communities. This activity contributed 238,000 jobs and contributed \$26.5 billion in economic output.

Despite the challenges presented by a shrinking budget, NPS continues to protect and promote the resources found within national parks. Programs that leverage federal funds with matching private contributions, partnering with local business and government, utilizing volunteers, and philanthropic efforts driven by the National Park Foundation are some of the tools utilized by NPS to enhance their stewardship efforts.

### **New and Innovative Ideas**

In 2013, the National Parks Conservation Association and the National Park Hospitality Association partnered with the Bipartisan Policy Center to host a forum intended to explore supplemental funding strategies for the national parks. Below is a brief summary of the 16 white papers.

**Enhancing Park Experiences Through Fees:** Currently, user fee revenues are used to pay for a portion of the costs of facilities, programs, and cost of collection. Numerous ideas to enhance fee revenues should be explored including adjusting the law to allow charging higher fees to foreign tourists and raising the America the Beautiful pass cost. Additionally important is working with key park partners to ensure successful reauthorization of FLREA to guarantee continuation of fee revenue.

**Penny for the Parks and the Great Outdoors:** Adding an additional penny per gallon federal tax on the existing motor fuels tax would generate \$1.5 billion annually, and the amount collected would remain stable for a decade. These earmarked ‘Penny for the Parks’ funds could be used to make repairs to the 90 percent of the 9,450 miles of park roads in fair to poor condition to help ensure Americans have improved access to campgrounds, rivers, and other sites. This action would require action by Congress and would involve multiple committees.

**Park Legacy Partnership Fund: Leveraging Public Dollars:** Similar to the Historic Preservation Act and its Historic Preservation Fund, approximately \$350 million in annual revenue could be garnered from two sources: oil, gas, and mineral production on federal lands and waters, and private, philanthropic donations. These funds could be automatically directed to the NPS from the Treasury after Congressional review of proposed infrastructure projects. New legislation would be required to establish the Legacy Partnership Fund.

**Expanded Visitor Services Through Concessioners:** Fees from concessionaires could bring in more revenue through market-driven increases in sales of goods and services within national parks. Currently, concessionaires pay \$100 million in fees on gross revenues of \$1.2 billion. Increasing visitor services could increase franchise fees by 50% in three years. NPS should assess this option through Concessions Management Advisory Board.

**National Park Endowment:** In addition to appropriations, an endowment could be created with a goal of raising \$1 billion from federal and non-federal sources in connection with the centennial. Endowment legislation would need to be developed and the White House should begin the process of recruiting and appointing individuals who can help design and build a successful endowment.

**Expanding Use of Historic Tax Credits:** NPS can increase the number of partnerships with private parties on long term historic leases under Section 111 of the National Historic Preservation Act as a way to fund rehabilitation and use of significant historic buildings. NPS presently has a \$3 billion deferred maintenance cost for historic buildings within NPS units. NPS and partners should evaluate how to expand the use of HTC.

**Expansion of Guest Donation Exports:** The current Guest Donation Program will generate \$1 million in donations in 2013 at approximately 12 park units and could be expanded and restructured to collect around \$10 million annually by 2016. The program would need an internal NPS champion to spearhead it. Additionally, a task force with representatives from concessionaires, friends groups, the National Park Foundation and NPS should be established.

**Expanded Cooperation with Destination Marketing Organizations:** Revenue derived from state and local taxes on lodging, food, and other services is in the billions of dollars annually. NPS would receive funds directly for some services provided to visitors and would have additional costs reduced by services provided by Destination Marketing Organizations. Funding potential is estimated at \$20 million annually. NPS should work with DMAI and NCSTD to create a plan for ten pilot efforts.

**Conservation Service Corps:** With high unemployment among seniors and young people, the NPS can utilize volunteer skills to increase capacity and see significant cost savings through the 21st Century Conservation Service Corps. NPS Park Facility Management Division found that using corps provided a costs savings of over 50%.

**Non-Appropriated Fund Instrumentalities:** Non-Appropriated Fund Instrumentalities (NAFIs) can be utilized for investment of concessionaire fees and NPS leasing fees, allowing fees to earn interest. The program would need NPS and DOI champions to make it work, and a joint concessionaire/NPS task force should be charged with further research into this option and its funding potential.

**Park Zone Taxes:** Tax/fee revenues from businesses near parks generated from sales, property, or other taxes. Park Zone Taxes could be modeled after city initiatives to fund local parks such as “self tax” commercial areas of the city that collect fees from property owners to provide services and programs. Park Zone taxes would need to be approved by local governments, and in some cases state governments. Engaging tax experts as well as members of Congress with national parks in their district will be important to making this work.

**Energy Savings and Utilities:** Offset national park operating expenses by developing renewable energy on NPS units. Accelerating installation of solar PV systems could produce sufficient energy to offset costs and may provide enough energy to be sold back to the grid. PV technology and installation is already occurring in many park units, but in order to sell electricity back to the grid, legal authority would be needed.

**Bonds, Revolving Loans and More:** Bonds, loan guarantees, and revolving funds provide a means to encourage the use of public and private capital for investments in NPS service buildings and infrastructure for renovation, maintenance, and energy efficiency. A wide range of federal programs exist to authorize the use of loans, bonds, etc., to encourage investments, but these mechanisms are not currently available for use in national parks. The NPS could partner with private interests to establish mechanisms to take advantage of these options.

**Increases in Volunteerism:** NPS has benefited from 2.5 million visitors since 2008, providing an estimated value of over \$2.1 billion in services. NPS should coordinate national and regional volunteer program partners to develop a business case for volunteerism, pilot programs, and include volunteerism in strategic components of the 2016 Centennial marketing campaign.

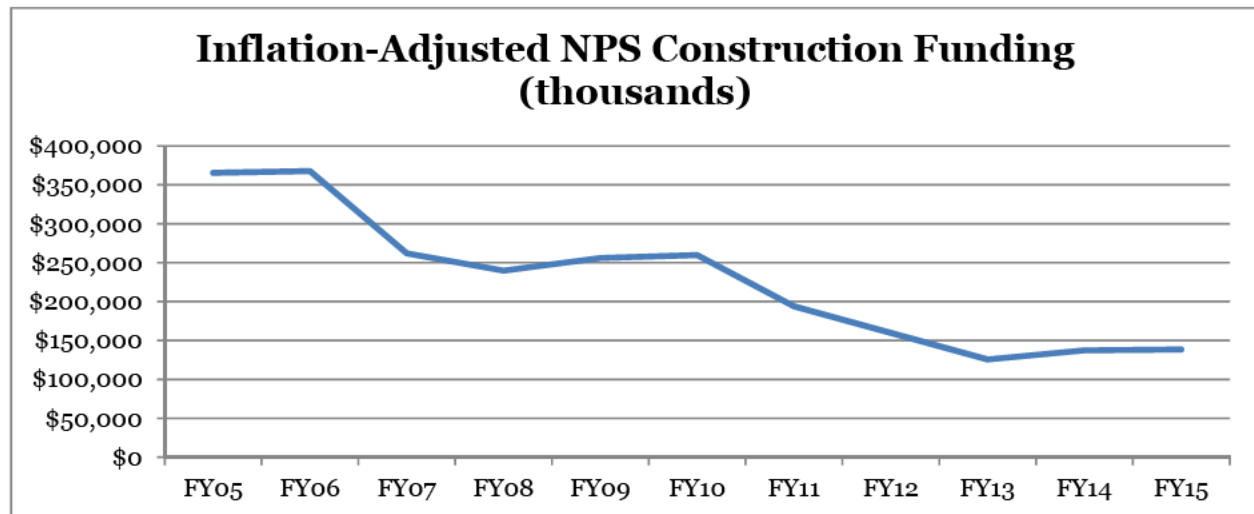

**Commemorative Coins/Stamps:** \$12.25 million in revenue for the NPS can be generated from the sale of a series of commemorative coins matched dollar for dollar by the National Park Foundation. A bill has been introduced to mint a centennial park coin (HR 627), passage of this or a similar bill would be necessary for the program to begin.

**Special Fundraising Events:** Special events such as concerts and festivals could be held at select NPS units with revenues from ticket sales going directly to the NPS or from the event organizer as specified in an RFP. Estimated net proceeds are \$50,000 to \$200,000, with a realistic annual goal of \$2 million.

## **Republican Rhetoric**

Declining appropriations for construction have not stopped Republicans from criticizing NPS and other agencies for a perceived inability to stop or slow down growth of the backlog. Critics identify misaligned priorities, a focus on land acquisition, and the creation of new parks, as the reason for the growing backlog.

Establishment of new parks, which can only be done by Congress, does not contribute to the maintenance backlog or drain resources away from the construction account. Over the past ten years, the annual budgets of new parks accounted for approximately \$10 million of NPS funding. This is insignificant compared to the annual \$350 million growth of the maintenance backlog.

Additionally, this argument ignores that half of maintenance backlog at NPS (approx. \$6 billion) is comprised of transportation projects that require funds from the Federal Highway and Transportation Act. About 90% of NPS managed paved roads are in “fair” to “poor” condition and require attention to restore their condition to ensure visitor safety. NPS also manages a number of heavily used bridges, including the Arlington Memorial Bridge in Washington, D.C., which require significant investment to rehabilitate their condition. In total, 28 bridges managed by NPS are “structurally deficient.” Addressing the NPS’s transportation needs is a serious public safety concern that Congress must address.

However, the funds authorized under the Moving Ahead for Progress in the 21<sup>st</sup> Century Act (Map-21), capitalize the Federal Lands Transportation Program at \$300 million per year, with NPS receiving \$240 million. NPS needs \$460 million per year just to maintain existing condition its core transportation infrastructure.

The President’s FY16 budget request includes a total of \$441.9 million for the Second Century Infrastructure Investment, which will enable NPS to address the growing maintenance backlog. The request also includes \$100 million for the Public Lands Centennial Fund. This program will

allow the four Federal land management agencies to compete for funding to address critical maintenance backlog projects. If the Majority is serious about addressing deferred maintenance on public lands, they would fund these requests.

**FY2016 Budget Proposal**

Public-private partnerships and other programs to bolster revenue for NPS are important. There are not, however, an adequate replacement for appropriated dollars. Private money or corporate sponsorships will not finance large transportation infrastructure projects which make up over half of the maintenance backlog. For example, NPS has several “mega-projects,” like rehabilitation of the Arlington Memorial Bridge, estimated to cost approximately \$250 million, or more. Projects of this scale and cost are not met by the current transportation allocation for NPS, or donated dollars, and require Congress to invest in the future of national parks.

**The National Park Service Centennial Initiative** is a central focus of this year’s budget request. The request for the Centennial Initiative includes a discretionary increase of \$326.3 million, which features \$8 million to increase seasonal staffing, \$20 million for youth engagement, \$13.5 million to support new parks, and \$2 million for volunteer coordination. In addition, the \$326.3 million funding increase includes \$242.8 million for the operations and construction accounts to revitalize and repair 6,735 identified high priority assets in 10 years.

**Centennial Initiative Increases for FY 2016**

(\$ in millions)	<b>Discretionary</b>	<b>Mandatory</b>
Operation of the National Park System	+174.4	+0.0
Centennial Challenge	+40.0	+100.0
Construction (Second Century Infrastructure Investment)	+111.9	+300.0
<b>Subtotal, National Park Service</b>	<b>+326.3</b>	<b>+400.0</b>
Public Lands Centennial Fund	+0.0	+100.0
<b>Total, Centennial Initiative</b>	<b>+326.3</b>	<b>+500.0</b>

**\$50 million for the NPS Centennial Challenge**, a matching grant program designed to improve parks by increasing youth engagement and community involvement. Congress appropriated \$10 million in FY15 for the Centennial Challenge. This year’s request for the matching program is a \$40 million increase to \$50 million, which would generate an additional \$50 million through private contributions. NPS requests \$100 million of mandatory funding per year for three years. Over the next three years, if authorized by Congress, the Centennial Challenge could fund \$600 million in construction, maintenance, and education projects, only half of which would come from appropriated funds.

**A total of \$441.9 million for the Second Century Infrastructure Investment** will enable NPS to address the growing maintenance backlog. For this initiative, NPS requests a \$111.9 million discretionary increase to the construction account and \$300 million in an annual mandatory funding for the next years.

**\$100 million for the Public Lands Centennial Fund** will allow NPS to compete with the other three Federal land management agencies for funding to address critical maintenance backlog projects.

The Administration plans to present Congress with a bill to fund and authorize these priorities.

**JULY 20, 2015**

**MEMORANDUM**

**TO: DEMOCRATIC MEMBERS AND STAFF  
SUBCOMMITTEE ON INDIAN, INSULAR AND ALASKA NATIVE AFFAIRS**  
**FROM: NATURAL RESOURCES DEMOCRATIC COMMITTEE STAFF (5-6065)**  
**RE: LEGISLATIVE HEARING ON H.R. 1880 AND H.R. 2388**

---

On Wednesday, July 22, 2015, at 2:00 p.m., in room 1334 Longworth House Office Building, the Subcommittee on Indian, Insular and Alaska Native Affairs will hold a legislative hearing on the following bills:

- **H.R. 1880 (Lujan Grisham, D-NM)**, To require the Secretary of the Interior to take into trust 4 parcels of Federal land for the benefit of certain Indian Pueblos in the State of New Mexico. *“Albuquerque Indian School Land Transfer Act”*
- **H.R. 2388 (Young, AK)**, To reverse the designation by the Secretary of the Interior and the Secretary of Agriculture of certain communities in the State of Alaska as nonrural. *“Subsistence Access Management Act of 2015.”*

**WITNESSES**

- **Mr. Mike Canfield**, President and CEO – Indian Pueblo Cultural Center & Indian Pueblo's Marketing, Albuquerque, NM. *(H.R. 1880)*
- **Ms. Julie Kitka**, President – Alaska Federation of Natives, Anchorage, AK. *(H.R. 2388)*
- **The Honorable Lee Wallace**, President – Organized Village of Saxman, Ketchikan, AK. *(HR 2388)*
- **Ms. Jacqueline Pata**, Vice-Chair – Sealaska Corporations, Juneau, AK. *(HR 2388)*
- **Mr. Mike Black**, Director – Bureau of Indian Affairs, U.S. Department of the Interior. *(H.R. 1880, H.R. 2388)*

## **H.R. 1880 – THE ALBUQUERQUE INDIAN SCHOOL LAND TRANSFER ACT (LUJAN GRISHAM, D-NM)**

On April 16, 2015, Representative Lujan Grisham of New Mexico introduced H.R. 1880, which will take into trust 4 parcels of Federal land for the benefit of the Nineteen Pueblos<sup>1</sup> in the state of New Mexico. Its Senate companion, S. 986, cosponsored by both Senator Udall and Senator Heinrich, was reported favorably out of the Senate Committee on Indian Affairs on May 13, 2015.

H.R. 1880 is cosponsored by the entire New Mexico delegation.

### **Background and Need**

The Executive Order of October 3, 1884 set aside a tract of land in Albuquerque, New Mexico for the construction of the Albuquerque Indian School. The Albuquerque Indian School provided an education to Indian students until the 1980's, when the school's programs were transferred to the Santa Fe Indian School.

In 1969, the United States started the process of converting the 1884 Albuquerque Indian School Reserve into land under the jurisdiction and control of the Nineteen Pueblos of New Mexico. Starting in 1969, the U.S. Government conveyed 11 acres of the Reserve to the Pueblos for the construction of what became the Indian Pueblo Cultural Center. In 1993, the United States Government placed an additional estimated 44 acres of the former Albuquerque Indian School Reserve in trust for the Nineteen Pueblos.

Since then, Congress has enacted legislation in 1978,<sup>2</sup> 2008,<sup>3</sup> and 2011<sup>4</sup> to convey additional land from the Reserve in trust for the Nineteen Pueblos.

The United States Bureau of Land Management (BLM) conducted a new survey of the former school properties pursuant to Public Law 110-453. The final survey report issued in April 2011 identified minor discrepancies in the legal descriptions from previous trust deeds. The survey also identified the correct boundaries of two additional tracts of land the Bureau of Indian Affairs (BIA) no longer needed for its administrative functions.

This bill would address the technical discrepancies identified by the 2011 BLM final survey report and place in trust two additional parcels formerly used by BIA for administrative functions.

### **Legislation**

H.R. 1880 would direct the Secretary of the Interior to convey the following tracts of land to the United States to be held in trust for the Nineteen Pueblos:

- Tract 1: A strip of land totaling 0.41 acres, in the southwest corner of the tract placed in trust in 1993.

---

<sup>1</sup> The 19 Pueblos are the Acoma, Cochiti, Isleta, Jemez, Laguna, Nambe, Ohkay Owingeh (San Juan), Picuris, Pojoaque, San Felipe, San Ildefonso, Sandia, Santa Ana, Santa Clara, Santo Domingo, Taos, Tesuque, Zia, and Zuni.

<sup>2</sup> Public Law 95-232

<sup>3</sup> Public Law 110-453

<sup>4</sup> Public Law 111-354

- Abandoned Indian School Road: A strip of land totaling 0.83 acres along the south boundary of the tract placed in trust in 1993.
- Tract B West: A parcel of land totaling 3.69 acres immediately south of abandoned Indian School Road and immediately west of one of the parcels placed in trust in 2012 pursuant to Public Law 110-453.
- Tract D South: A parcel of land totaling 6.18 acres immediately south of Tract D North, which was placed in trust in 2012 pursuant to Public Law 110-453. Tract D North and Tract D South are located south of Interstate 40.

The land taken into trust shall be used for the educational, health, cultural, business and economic development of the Nineteen Pueblos.

It is anticipated that the Administration will testify in support of the bill.

## **H.R. 2388 – THE SUBSISTENCE ACCESS MANAGEMENT ACT OF 2015 (YOUNG, R-AK)**

On May 15, 2015, Representative Young of Alaska introduced H.R. 2388, which would reverse the designation by the Secretary of the Interior and the Secretary of Agriculture of certain communities in the State of Alaska as nonrural. The Senate companion bill (S.1154) was introduced by Sen. Murkowski on April 30, 2015.

It currently has no cosponsors.

### **Background and Need**

Under Title VIII of the Alaska National Interest Lands Conservation Act (ANILCA)<sup>5</sup> the Secretary of the Interior and the Secretary of Agriculture jointly implement the Federal Subsistence Management Program.

The Program provides a preference to rural Alaskan residents for taking fish and wildlife resources for subsistence uses on Federal public lands and waters in Alaska. To administer the program, the Federal Subsistence Board was established, which is comprised of:

- A Chair appointed by the Secretary of the Interior with concurrence of the Secretary of Agriculture;
- The Alaska Regional Director of the U.S. Fish and Wildlife Service;
- The Alaska Regional Director of the U.S. National Park Service;
- The Alaska State Director of the U.S. Bureau of Land Management;
- The Alaska Regional Director of the U.S. Bureau of Indian Affairs;
- The Alaska Regional Forester of the U.S. Forest Service; and
- Two public members appointed by the Secretary of the Interior with concurrence of the Secretary of Agriculture.

The board members participate in the development of program regulations, which, among other things, sets forth eligibility and harvest seasons and determines which areas of Alaska are rural and nonrural. Alaskan residents living in areas determined to be nonrural are not eligible to participate in the program. The rural or nonrural status of communities is reviewed every 10 years, beginning with the 2000 census data.<sup>6</sup>

The final rule on rural and nonrural designations, based on data from the 2000 census, was published in the Federal Register on May 7, 2007.<sup>7</sup> Among other provisions, this rule added the Village of Saxman to the Ketchikan nonrural area, thereby moving Saxman out of the subsistence program. The rule allowed until May 7, 2012 (5 years) for compliance. This date was later extended until after the Secretary-mandated review of the rural determination process and the decennial review are complete, or in 5 years, whichever comes first.<sup>8</sup>

According to the final rule from 2007, “Saxman is directly adjacent to Ketchikan, connected by road, and surrounded by the outlying Ketchikan development. Visually, the only distinguishing feature to indicate the boundary between Ketchikan and Saxman is a sign on the South Tongass

<sup>6</sup> 36 CFR 242.15 and 50 CFR 100.15

<sup>7</sup> 72 FR 25688

<sup>8</sup> 77 FR 12477

Highway. ...[T]he need for consistency of application of the criteria for grouping of communities, and the information on Saxman relative to those criteria, the Board grouped Saxman with the nonrural Ketchikan area.”<sup>9</sup>

Many in the region feel this decision is flawed, as Saxman is a small, independent community with its own Tribal government and way of life, and should not be lumped in with the larger and more urban Ketchikan.

Another proposed rule published in late January 2015 would allow the Federal Subsistence Board more flexibility when deciding which communities should be considered rural for subsistence purposes.<sup>10</sup>

### **Legislation**

HR 2388 would undo the final rule from May 7, 2007, in order to reestablish Saxman as rural.

It would also require Congressional approval for any new proposal to redesignate a community from rural to nonrural – and no change will be official or effective until Congress formally approves it. It does provide federal subsistence regulators the authority to transition a community back to rural subsistence status without any outside involvement.

Finally, it would require that the Secretaries publish an interim final rule amending any regulations that are inconsistent with the bill within 30 days of its enactment, and would require that, once each year, the Secretaries publish a list of communities and areas designated as rural and nonrural in the Federal Register.

**FROM: Water, Power, and Oceans Subcommittee Staff (5-6065)**  
**SUBJECT: WPO Legislative Hearing on H.R. 564, H.R. 1772, H.R. 2168**

---

The Subcommittee on Water, Power, and Oceans will hold a Legislative Hearing, **Thursday, July 23, 2015 at 10:30 a.m.**, in room **1334** of the Longworth House Office Building on the following bills:

- **H.R. 564** (Endangered Salmon and Fisheries Predation Prevention Act), To amend the Marine Mammal Protection Act of 1972 to reduce predation on endangered Columbia River salmon and other nonlisted species, and for other purposes.
- **H.R. 1772** (Delaware River Basin Conservation Act of 2015), To direct the Secretary of the Interior to establish a non-regulatory program to build on and help coordinate funding for restoration and protection efforts of the 4-State Delaware River Basin region, and for other purposes.
- **H.R. 2168** (West Coast Dungeness Crab Management Act), To make the current Dungeness crab fishery management regime permanent and for other purposes.

**WITNESSES**

- **Barry Thom**, West Coast Deputy Regional Administrator, National Marine Fisheries Service
- **Wendi Weber**, Northeast Regional Director, U.S. Fish and Wildlife Service
- **Mr. Dale Beasley**, President, Columbia River Crab Fisherman's Association
- **Mr. Carlos Smith**, Chairman, Columbia River Inter-Tribal Fish Commission
- **Collin O'Mara**, *President and CEO, National Wildlife Federation (Minority witness)*

## **H.R. 564: ENDANGERED SALMON AND FISHERIES PREDATION PREVENTION ACT**

H.R. 564 was introduced by Representative Herrera Beutler (R-WA) on January 27, 2015. Identical bills were introduced in the 112<sup>th</sup> (H.R. 3069) and 113<sup>th</sup> (H.R. 1308) Congresses, both of which were reported out of the Natural Resources Committee but never brought to the floor. On June 13, 2013, the Subcommittee on Fisheries, Wildlife, Oceans and Insular Affairs held a legislative hearing on H.R. 1308. For additional background, please see memo dated June 13, 2011 and the Additional Views dated December 11, 2013.

This bill would amend the Marine Mammal Protection Act (MMPA) to authorize the Secretary of Commerce to issue annual permits to Washington, Oregon, Idaho and five tribal groups (Nez Perce, Umatilla, Warm Springs, Yakama, and the Columbia River Inter-Tribal Fish Commission) to lethally take sea lions. The bill is intended to reduce the effect of predation by sea lions on salmon listed under the Endangered Species Act (ESA) and *any* nonlisted fish. Under H.R. 564, as many as 85 sea lions could be taken in a year. H.R. 564 also waives the application of Section 102(2)(c) of NEPA to the permit process, which would eliminate the requirement that the Secretary consider the environmental impacts associated with the permit, and alternatives to the permitted action.

### ***Status of the Stock: Colombia River Salmon***

The Columbia River and its tributaries are home to 13 distinct populations of salmon and steelhead that are listed under the Endangered Species Act and, collectively, are called salmonids.<sup>1,2</sup> The decline of these populations, and their potential for recovery, is related to many factors. Due to the complex nature of salmon species' life histories, it is difficult to quantify the relative impact of each of the following factors on these populations. However, the threats to these species are well-documented,<sup>3</sup> and include hydropower development and habitat loss, fishing pressure, interactions with hatchery fish, climate change, pesticide exposure, and predation.

### ***California Sea Lions (CSLs) and salmon predation***

The CSL is found from southern Mexico to southwestern Canada. The breeding areas of the CSL are on islands located in southern California in the U.S. and in western Baja California and the Gulf of California in Mexico. In normal years, adult and juvenile males migrate as far north as British Columbia, Canada while females and pups remain in southern California waters in the

---

<sup>1</sup> Salmon are not listed under the ESA as species, but as individual stocks identified by region and timing of their return to freshwater. These stocks are known as "evolutionarily significant units."

<sup>2</sup> NOAA Fisheries, Office of Protected Resources. Marine/Anadromous Fish Species under the Endangered Species Act (ESA). (2011). Available at <http://www.nmfs.noaa.gov/pr/species/esa/fish.htm>.

<sup>3</sup> Upper Columbia Salmon Recovery Board. 2007. Upper Columbia Spring Chinook, Salmon and Steelhead Recovery Plan.

non-breeding season. In warm water (El Niño) years, some females are found as far north as Washington and Oregon, presumably following prey.

CSL numbers have grown since the 1970s and the U.S. population was estimated to be 238,000 animals<sup>4</sup> in 2011. CSLs in the U.S. are not listed as "endangered" or "threatened" under the Endangered Species Act (ESA) or as "depleted" under the Marine Mammal Protection Act (MMPA). CSLs populations, while growing, are susceptible to environmental stressors such as harmful algal blooms as well as human-caused stressors. Human-caused stressors include mortalities from shootings, direct removals, commercial fishing, recreational hook and line fisheries, tribal takes, and entrainment in power plant intakes.

Though it has never been demonstrated in the scientific literature that sea lion predation has played a significant role in the overall decline of Pacific salmon stocks, there is concern that sea lion predation can be a localized threat to specific runs of fish.<sup>5</sup> Recent peer-reviewed literature suggests that marine mammal culling programs can reduce the local density of marine mammal populations,<sup>6</sup> but that the effects of that culling are sometimes unpredictable, hard to evaluate, and dependent on removing a large proportion of the predator population (>50%). In fact, removing marine mammals sometimes had no clear effects on the catch of fisheries species, and, at times, the abundance of fisheries species decreased with marine mammal culling.<sup>7</sup>

The salmon predation rate by CSLs (predation as a percent of the salmon run) below Bonneville Dam from January-May has declined each year since 2007 from 4.2 percent to 0.6 percent in 2012, and then slightly increased in 2013 (1.2 percent) and 2014 (1.3 percent).<sup>8</sup> Except for the previous 2 years, 2014 had the lowest CSL predation on salmonid since 2003.

The observed predation rate has never exceeded 4% at the dam and, in recent years, has averaged about 1-1.5% of the run. A news story from July 16, 2015 reported that, "[t]he 359,506 adult spring and summer chinook counted at the dam to date is the third largest total since at least 1938. The record is the 454,603 fish counted from Jan. 1-July 15, 2001."<sup>9</sup> Clearly sea lion predation is not crashing the spring and early summer salmon runs.

<sup>7</sup> Morissette, Christensen, Pauly (2012) Marine Mammal Impacts in Exploited Ecosystems: Would Large Scale Culling Benefit Fisheries? *PLoS ONE* 7(9): e42966 doi:10.1371/journal.pone.0043966

<sup>8</sup> Army Corps of Engineers (2014) Evaluation of pinniped predation on adult salmonids and other fish in the Bonneville Dam tailrace, 2014.

<sup>9</sup> <http://www.seattletimes.com/sports/record-breaking-columbia-river-salmon-run-news-now-a-daily-occurrence/>

The MMPA offers special protections to marine mammals, including the CSL, regardless of whether they are listed as “threatened” or “endangered” under the ESA. Generally, MMPA prohibits the “take”<sup>10</sup> of marine mammals, with very few exceptions.

In 1994, Congress amended the MMPA to include Section 120, which authorizes the Secretary of Commerce to issue permits to States for the intentional lethal take of individually identifiable seals and sea lions that negatively impact ESA-listed salmon stocks, as well as stocks that are in danger of being listed under the ESA, or stocks that migrate through the Ballard Locks at Seattle, Washington. Section 120 directs the Secretary to establish a Pinniped-Fishery Interaction Task Force to recommend to the Secretary whether the State’s application should be approved or denied. This provision does not apply to Stellar Sea Lions (SSLs), which are listed as “threatened” under the ESA.

On December 7, 2010, Oregon and Washington requested a reinstatement of the authorization to lethally remove CSLs at the Bonneville Dam. On May 12, 2011, the NMFS approved this new authorization and provided additional legal justification for its authorization to address the deficiencies that were highlighted in a Ninth Circuit court case on November 23, 2010<sup>11</sup>. Since the Court held that the original NEPA compliance work was legally sufficient, the NMFS did not prepare any supplemental NEPA documentation to authorize the lethal removal of sea lions.

On May 20, 2011, the Humane Society of the United States (HSUS), Wild Fish Conservancy, and two individual citizens filed suit over this new authorization. The Plaintiff’s claimed that the NMFS failed to require Oregon and Washington to produce a new Section 120 application; failed to convene the Pinniped-Fishery Interaction Task Force to make recommendations to approve or deny the authorization request; and addressed new data and information not previously considered without accepting public comment. On February 15, 2013, a federal district court in Oregon dismissed HSUS’ challenge. The District Court in Oregon held that the NMFS “did not act arbitrarily or capriciously” when it re-authorized Oregon, Washington, and Idaho’s ongoing program to lethally remove sea lions. The court also backed the government’s argument that fishery managers can scale back fishing when runs are low, but can do little to deter sea lion consumption short of the lethal take program. NMFS plans to assess the program again after 2016.

Barring a successful appeal, the states are authorized to remove specific CSLs eating threatened salmon and steelhead in the Columbia River. The authorization stays in effect until June 1, 2016. The authorization allows the states to remove up to 93 CSLs a year. However, proponents of H.R. 564 argue that the bill is necessary because the take authorization only covers CSLs that

---

<sup>10</sup> Under the MMPA, “take” means to “harass, hunt, capture, or kill, or attempt to harass, hunt, capture, or kill any marine mammal” (16 U.S.C. 1362(13)).

<sup>11</sup> <https://www.federalregister.gov/articles/2011/09/12/2011-23266/marine-mammals-pinniped-removal-authority#h-9>

have been observed feeding on salmon at or near the Bonneville dam. Additionally, they believe tribes and states should be allowed to remove sea lions from any part of the river.

### **H.R. 1772: DELAWARE RIVER BASIN CONSERVATION ACT OF 2015**

H.R. 1772 was introduced by Representative Carney (D-DE) on April 14, 2015. Very similar versions of this bill were introduced by Representative Carney in the 112<sup>th</sup> (H.R. 2325) and 113<sup>th</sup> (H.R. 664) Congresses, but this will be the first time a hearing is held in the House. The major difference with the previous versions of this bill is that H.R. 1772 authorizes \$5 million a year to be appropriated to carry out this Act, whereas previous versions used existing funds within the U.S. Fish and Wildlife Service (USFWS) budget authority. An identical bill has been introduced in the Senate (S. 921) by Senator Carper (D-DE).

#### ***Background***

The Delaware River Basin is national treasure of cultural, environmental, ecological and economic importance. It covers 12,500 square miles in Delaware, New Jersey, New York, and Pennsylvania, and more than 2000 tributary rivers and streams. The area is home to over 8 million people, and the Basin provides clean drinking water to 16 million people, including to New York City and Philadelphia. In addition, the Basin contributed \$25 billion in economic activity and is responsible for over 600,000 jobs directly or indirectly. The Delaware River and Delaware Bay are home to more than 200 species of animals, including sturgeon, horseshoe crabs, red knots, and many recreational sport fishing species. Eastern oysters also support a \$4 million commercial fishery. Despite these benefits, it does not have dedicated federal support or a coordinated conservation strategy, unlike other major U.S. watersheds like Chesapeake Bay, the Great Lakes, and Puget Sound).

#### ***H.R. 1772: The Delaware River Basin Conservation Act***

H.R. 1772 requires the USFWS to establish the Delaware Basin Restoration Program, which is composed of two elements: 1) a non-regulatory restoration program in the Delaware River Basin, and 2) voluntary competitive grant and technical assistance programs. The four-state Delaware Basin region includes all of Delaware Bay and portions of Delaware, New Jersey, New York, and Pennsylvania located in the Delaware River watershed. The restoration program will:

- Draw on management plans for the Basin or portions of the Basin and work in consultation with applicable management entities, including representatives of the Partnership for the Delaware Estuary, the Delaware River Basin Commission, the federal government, other state and local governments, and regional and nonprofit organizations,

to identify, prioritize, and implement restoration and protection activities within the Basin.

- Adopt a Basin-wide strategy that supports the implementation of a shared set of science-based restoration and protection activities, targets cost-effective projects with measurable results, and maximizes conservation outcomes with no net gain of federal full-time equivalent employees
- Establish voluntary grant and technical assistance programs.

In addition, H.R. 1772 would require the USFWS to establish the Delaware River Basin restoration grant program, which would provide competitive matching grants to carry out restoration and protection activities within the Basin. The bill also requires USFWS to develop criteria for the grant program to ensure that funded activities accomplish specified purposes and advance the implementation of priority actions or needs identified in the strategy adopted under this Act. For these purposes, the bill authorizes the USFWS to contract with the National Fish and Wildlife Foundation or other organizations that offer grant management services.

H.R. 1772 authorizes \$5 million for each of the years 2016 to 2021, and at least 75% funds must be used for the grant and technical assistance programs. This funding level represents only 7% of the funding for restoration in the Chesapeake Bay (\$73 million) and less than 2% of the funding for the Great Lakes (\$300 million). Projects dealing with water quality improvements, habitat restoration and protection, flood mitigation, resiliency enhancement, public access, recreation, outreach and education, and monitoring and research would all benefit from the Delaware River Basin Conservation program.

### **H.R. 2168: WEST COAST DUNGENESS CRAB MANAGEMENT ACT**

H.R. 2168 was introduced by Representative Herrera Beutler (R-WA) on April 30, 2015. The bill amends Section 203 of Public Law 105-384 “An act to approve a governing international agreement between the United States and the Republic of Poland, and for other purposes” ([16 U.S.C. 1856 note](#)). Section 203 provides authority to Washington, Oregon, and California to manage the Dungeness crab fishery. Each of these states may currently adopt and enforce state laws and regulations governing fishing and processing in the exclusive economic zone (EEZ) in any Dungeness crab (*Metacarcinus magister*) fishery for which there is no fishery management plan under the Magnuson-Stevens Fishery Conservation and Management Act (MSA).

H.R. 2168 strikes paragraph (i) of this section, which reads as follows:

*“(i) Sunset. - This section shall have no force or effect on and after September 30, 2016.”*

By removing the sunset clause of this Act, the Public Law 105-384 and state authority of this fishery becomes permanent, rather than having to be periodically re-authorized (usually every 5 years).

Providing for this law to become permanent is acceptable for two reasons. First, the state management of the Dungeness crab fishery has been biologically and economically sustainable<sup>12,13</sup>. Large fluctuations in catch of Dungeness crab are natural<sup>14</sup> and responses to these are more efficiently addressed at the state level. Secondly, if there is a systemic problem with the state management of the Dungeness crab fishery, the Pacific Fishery Management Council could implement a fishery management plan under the MSA which would supersede the state authority and return management to federal agencies.

The fact that the Pacific coast states are currently successfully managing Dungeness crab fisheries may be used by the Majority as a reason to implement state management for red snapper in the Gulf of Mexico. However, several important contrasts between these two fisheries are important to note. First, the red snapper in the Gulf is currently still recovering from a long history of over-exploitation. This means it is in a much more vulnerable state than Dungeness crabs and therefore a cautionary approach is warranted. Secondly, California, Oregon and Washington have demonstrated a history of sustainable management, with several accountability measures, close monitoring, and ongoing science. Although the Gulf red snapper commercial fishery has strict accountability measures in place so that catch can be monitored, the large number of recreational anglers makes the recreational sector much harder to monitor. Therefore, there is a lot of uncertainty in the recreational catch, and, as a result, there is uncertainty in the estimate of fishing mortality, which leads to large buffers aimed at minimizing the risk of overfishing. Finally, management of red snapper in federal waters is currently restrictive (this year the recreational season for retaining red snapper was 10 days) in response to the very liberal season lengths in State waters. In summary, these are very different fisheries with very different histories and current stock sizes, targeting very different species. What works for one, may not necessarily work for the other.

**JULY 20, 2015**

**TO: DEMOCRATIC MEMBERS AND STAFF,  
FULL COMMITTEE**

**FROM: COMMITTEE STAFF (x5-6065)**

**RE: OVERSIGHT HEARING ON THE SOCIAL COST OF CARBON**

---

The Full Committee will hold an oversight hearing on **Wednesday, July 22, 2015, at 10:00am, in Longworth House Office Building Room 1324** on “An Analysis of the Obama Administration’s Social Cost of Carbon.”

**WITNESSES:**

- Scott Segal, *Partner, Bracewell and Giuliani*
- Kevin D. Dayaratna, Ph.D., *Senior Statistician and Research Programmer, Center for Data Analysis, Heritage Foundation*
- Patrick J. Michaels, Ph.D., *Director, Center for the Study of Science, Cato Institute*
- Michael K. Dorsey, Ph.D. (Minority witness), *Interim Director, Energy & Environment Program (Joint Center for Political & Economic Studies) & Co-Founder (US Climate Plan)*

**WHAT IS THE SOCIAL COST OF CARBON?**

The social cost of carbon (SCC) is an estimate of the additional economic damage done by the emission of one additional ton of CO<sub>2</sub>. According to the White House, the purpose of the SCC is to “allow agencies to incorporate the social benefits of reducing carbon dioxide emissions into cost-benefit analyses of regulatory actions that impact cumulative global emissions. ... It is intended to include (but is not limited to) changes in net agricultural productivity, human health, property damages from increased flood risk, and the value of ecosystem services due to climate change.”<sup>1</sup> The SCC can indicate a cost to society when CO<sub>2</sub> emissions increase as a result of a rule or it can show a benefit when CO<sub>2</sub> emissions decrease as the result of a rule. The current central estimate of the SCC is \$36 per ton of CO<sub>2</sub>.

**WHEN IS THE SCC USED?**

Executive Order 12866 requires federal agencies, to the extent permitted by law, “to assess both the costs and benefits of the intended regulation and, recognizing that some costs and benefits are

---

<sup>1</sup> [Response to Comments: Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866](#), Interagency Working Group on Social Cost of Carbon, United States Government, July 2015

difficult to quantify, propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify the costs.”

The SCC has already been used to help inform the cost-benefit analyses of many proposed federal rules. Without the SCC, the assumed cost of increasing CO<sub>2</sub> emissions would be zero, even though the health and economic impacts of climate change have been thoroughly documented.

**SCC DERIVATION METHODS**

The benefits from reduced (or costs from increased) emissions in any future year can be estimated by multiplying the change in emissions in the year in question by the SCC value appropriate for that year. The net present value of the benefits can then be calculated by multiplying each of these future benefits by an appropriate discount factor and summing across all affected years. The SCC was estimated using three integrated assessment models (IAM) called FUND, DICE, and PAGE, each of which are widely cited in the peer-reviewed literature and which are used by the Intergovernmental Panel on Climate Change.

**Revised Social Cost of CO<sub>2</sub>, 2010 – 2050 (in 2007 dollars per metric ton of CO<sub>2</sub>)<sup>2</sup>**

Discount Rate Year	5.0% avg	3.0% avg	2.5% avg	3.0% 95th
2010	10	31	50	86
2015	11	36	56	105
2020	12	42	62	123
2025	14	46	68	138
2030	16	50	73	152
2035	18	55	78	168
2040	21	60	84	183
2045	23	64	89	197
2050	26	69	95	212

The Interagency Working Group on the Social Cost of Carbon (IWG), which derived the estimates, “selected four SCC estimates for use in regulatory analyses... The first three estimates are based on the average SCC across models and socio-economic and emissions scenarios at the 5, 3, and 2.5 percent discount rates, respectively. The fourth value is included to represent the higher-than-expected impacts from temperature change further out in the tails of the SCC distribution. For this purpose, we use the SCC value for the 95th percentile at a 3 percent discount rate.”<sup>3</sup>

<sup>2</sup> [Technical Support Document: Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866](#), Interagency Working Group on Social Cost of Carbon, United States Government, February 2010

<sup>3</sup> *ibid*

## **SCC DERIVATION PROCESS**

The IWG describes the process for deriving the SCC as follows: “An interagency group convened on a regular basis to consider public comments, explore the technical literature in relevant fields, and discuss key inputs and assumptions in order to generate SCC estimates. Agencies that actively participated in the interagency process include the Environmental Protection Agency, and the Departments of Agriculture, Commerce, Energy, Transportation, and Treasury. This process was convened by the Council of Economic Advisers and the Office of Management and Budget, with active participation and regular input from the Council on Environmental Quality, National Economic Council, Office of Energy and Climate Change, and Office of Science and Technology Policy. The main objective of this process was to develop a range of SCC values using a defensible set of input assumptions that are grounded in the existing literature. In this way, key uncertainties and model differences can more transparently and consistently inform the range of SCC estimates used in the rulemaking process.”<sup>4</sup>

The first SCC estimates were released in February, 2010. Two updates to the SCC were issued in 2013, reflecting mostly changes made to the three IAM models by their respective authors. Another update, which changed the central estimate from \$37 to \$36 was released in July 2015. There were dozens of opportunities for public comment about the SCC directly and about rules that incorporated the SCC. Detailed responses to comments on the SCC were released in July 2015. At the same time, the IWG announced that “To help synthesize the technical information and input reflected in the comments, and to add additional rigor to the next update of the SCC, the IWG plans to seek independent expert advice on technical opportunities to improve the SCC estimates, including many of the approaches suggested by commenters and summarized in this document. Specifically, the IWG plans to ask the National Academies of Sciences, Engineering, and Medicine to examine the technical merits and challenges of potential approaches to improving the SCC estimates in future updates.”<sup>5</sup>

In July 2015, the IWG also described and responded to the comments it received since the November 2013 update.<sup>6</sup> Responses to the criticisms of the SCC can be found there.

## **IS THE SCC AN UNDERESTIMATE?**

The current SCC estimate of \$36 is considered by many to be an underestimate according to public comments and published, peer-reviewed articles. Comments released in February 2014 from a number of organizations recommend using a declining discount rate, improving the incorporation of uncertain catastrophic damages, more fully considering CO<sub>2</sub> fertilization benefits, the inclusion of two additional models to three already in use by the IWG, and updating the IWGs socio-economic assumptions.<sup>7</sup> Implementing these changes would likely result in a higher SCC.

<sup>6</sup> *ibid*

<sup>7</sup> [Comments Submitted by Environmental Defense Fund, Institute for Policy Integrity at the New York University School of Law, Natural Resources Defense Council, and Union of Concerned Scientists](#), on Docket ID No OMB-

A study published in *Nature Climate Change* by Stanford University researchers found that the SCC is not \$36 per ton but \$220 per ton.<sup>8</sup> Another article in *Nature Climate Change* pegged the number at over \$100.<sup>9</sup> Economists Frank Ackerman and Elizabeth Stanton estimate it at almost \$900.<sup>10</sup>

## WITNESSES

The majority will make its case in the hearing using no independent witnesses. Mr. Segal is a lobbyist for electric utilities.<sup>11</sup> The other two majority witnesses have ties to the climate change counter-movement (CCCM),<sup>12</sup> known colloquially as the climate denier campaign. Dr. Dayaratna works for the Heritage Foundation, which is one of the biggest ideological recipients of CCCM funding.<sup>13</sup> Patrick Michaels is a known climate denying scientist who has also attacked the mainstream scientific position on the depletion of the stratospheric ozone layer.<sup>14</sup>

Though Mr. Segal's message is not yet clear, he has made strong statements in opposition to the proposed Clean Power Plan: "Plus, let me just say this, you got a lot of talk about social cost of carbon and other issues that deal with the benefits that might be associated with this rule. *I want to be real clear with you, Monica, there are no benefits associated with this rule.* How can I say something like that? The percentage of carbon emissions that come even from the existing fleet of coal-fired power is relatively small looking at a worldwide carbon budget."<sup>15</sup>

Dr. Dayaratna has focused on the discount rate used to derive the SCC in a paper written and released by the Heritage Foundation. He and his coauthor claimed a 7% discount rate was more appropriate than the 3% chosen by the IWG because 7% is required in OMB's Circular A-4.<sup>16,17</sup> The White House response:

OMB guidance in Circular A-4 recommends that discount rates of 3 percent and 7 percent be used in regulatory impact analysis. The 7 percent rate is an estimate of the average before-tax real rate of return to private capital in the U.S. economy. It is a broad measure that reflects the returns to real estate and small business and corporate capital and is meant to approximate the opportunity cost of capital in the United States. The 3

<sup>16</sup> <http://www.heritage.org/research/reports/2013/11/loaded-dice-an-epa-model-not-ready-for-the-big-game>

<sup>17</sup> <http://www.heritage.org/research/reports/2014/04/unfounded-fund-yet-another-epa-model-not-ready-for-the-big-game>

percent rate is an estimate of the real rate at which consumers discount future consumption flows to their present value, often referred to as the social rate of time preference or the consumption rate of interest. As stated in the 2010 TSD, in a market with no distortions, the return to savings would equal the private return on investment, and the market rate of interest would be the appropriate choice for the social discount rate. In the real world, however, risk, taxes, and other market imperfections drive a wedge between the risk-free rate of return on capital and the consumption rate of interest.<sup>18</sup>

Dr. Michaels gave a talk at the Heritage Foundation on June 23, 2015 about the Social Cost of Carbon. There he made the case that temperatures predicted by models do not match “observed” temperatures taken from satellites and weather balloons. He also asserted there has not been any warming of the atmosphere in the last 22 years.<sup>19</sup> Also in that talk, he said of the California drought “Severe weather in California, there is none. If you want to talk about the drought in California, that is man-made by the people – the effects of it are man-made by the people in Sacramento. The California water system can hold 5 years’ worth of water. And so there should not be a problem there except they chose to make it a problem.”<sup>20</sup> He also spoke candidly about adaptation as a policy response to climate change; “People adapt to their environment, as long as they have enough money to do so.”<sup>21</sup>

Dr. Dorsey has written extensively about the impacts of climate change on low income communities and communities of color. He will discuss the implications for those communities if the SCC is incorrect or nonexistent.

The hearing is unlikely to include a witness from the OMB or the Council of Economic Advisers (CEA), the co-leads on developing the SCC, who can speak with first-hand experience about the SCC and its derivation. They were invited, but the majority did not give them sufficient notice.

S. 1407, Public Land Renewable Energy Development Act of 2015**

**June 9, 2015**

**Introduction**

The following is the Department of the Interior's Statement for the Record on seven bills pertaining to energy accountability and reform: S. 15, the Protecting States' Rights to Promote American Energy Security Act; S. 1218, the Nexus of Energy and Water for Sustainability Act of 2015; S. 1230, a bill to require Memoranda of Understanding with State Oil & Gas Programs; S. 1310 the Deficit Reduction Through Fair Oil Royalties Act; S. 1311, the Oil Spill Deterrent Act; S. 1340, the Coal Oversight and Leasing Reform Act of 2015; and S. 1407, the Public Land Renewable Energy Development Act of 2015.

This statement is being submitted in response to the third hearing convened by the Committee, with very short notice, that addressed a large number of significant bills. The following statement represents an initial review and analysis of the legislation; however, the Administration may identify additional concerns with the bills.

**Background**

The Department's mission affects the lives of all Americans. Interior stewards 20 percent of the Nation's lands, oversees the responsible development of 21 percent of U.S. energy supplies, is the largest supplier and manager of water in the 17 western States, maintains relationships with 566 federally recognized Tribes, and provides services to more than two million American Indian and Alaska Native peoples. In 2013, Interior's programs contributed an estimated \$360 billion to the U.S. economy and supported more than two million jobs in activities including outdoor recreation and tourism, energy development, grazing, and timber harvesting.

The Department protects and enables development of America's shared natural resources to supply the energy that powers the Nation's future. The Department's efforts are critical to ensure all development – energy, timber, forage, and non-energy minerals – is managed safely, smartly, and in compliance with the highest scientific and environmental standards. As a steward of lands, water, wildlife, and cultural heritage, Interior strives to ensure the sustainability of these assets to support the American economy, communities, and the wellbeing of the planet.

To encourage these resource stewardship and development objectives, Interior is shifting from a reactive, project-by-project resource planning approach to a more predictable and effective management of its lands and resources. The goal is to provide greater certainty for project developers when it comes to permitting and better outcomes for conservation through more effective and efficient project planning. This approach to smart development is being incorporated into all of Interior's energy and natural resource planning and is an important part of the plan to accomplish President Obama's all-of-the-above energy strategy. Interior's focus on powering America's energy future supports an all-inclusive approach – one that responsibly balances the development of conventional and renewable resources on the Nation's public lands.

**Oil & Gas** – Secretary Jewell has made it clear that as we expand and diversify our nation's energy portfolio, the development of conventional energy resources from BLM-managed lands will continue to play a critical role in meeting our energy needs and fueling our economy. Facilitating the safe and efficient development of these resources is one of the BLM's many responsibilities and part of the Administration's broad energy strategy, outlined in the President's *Blueprint for a Secure Energy Future*. Environmentally responsible development of these resources will improve economic conditions by increasing supplies for consumers and reducing our nation's reliance on oil imports, while also protecting our federal lands and the environment. As part of this effort, the Department is working with various agencies in support of Executive Order 13604 to improve the performance of Federal permitting and review of infrastructure projects by increasing transparency and predictability of infrastructure permitting and reviews.

In recent years, the BLM has overseen a significant increase in oil production, while also supporting continued natural gas production. Oil production from the Federal and Indian lands for which the BLM has permitting and oversight responsibility rose twelve percent in 2014 from the previous year and is now up 81 percent since 2008 – from 113 million barrels in 2008 to 205 million barrels today. By comparison, nationwide oil production over the same period increased 73 percent. The BLM is proud to be a leader in this area and of its efforts to make public lands available for oil and gas development in excess of industry demand.

**Coal** – The BLM is responsible for coal leasing on approximately 570 million acres of the 700 million acres of mineral estate that is managed by the BLM for the American people. Although only a fraction of these acres are actually leased for coal development, they comprise an outsized portion of domestic coal production, with roughly 40 percent of the coal produced in the United States in recent years coming from Federal lease tracts. The BLM works to ensure that the development of coal resources is done in an environmentally sound manner and that American taxpayers receive fair market value (FMV) for those resources. The BLM's coal program manages approximately 310 active leases covering 475,692 acres.

During the last decade, Federal coal leases produced 4.56 billion tons of coal with an approximate market value of \$55.4 billion, generating \$6 billion in royalty payments that were split between the states and the U.S. Treasury. During the same period, 46 Federal coal lease sales were held, covering 71,165 acres and containing 5.3 billion tons of recoverable coal. Approximately \$4.5 billion in bonus bids were collected for these 46 leases.

The Department is focused on addressing concerns about the Federal coal program raised by the Government Accountability Office (GAO) in a December 2013 report, the Department's Office of Inspector General (OIG) in a June 2013 report, Members of Congress, and others. The BLM recently published new guidance based on recommendations from the GAO and OIG regarding procedures for coal lease sale valuations and the inspection and enforcement of coal leases, permits, and licenses. Given the significant revenues at stake within the Federal coal program, we appreciate the Congressional focus on these critical issues and look forward to a continued and robust dialogue.

**Renewable Energy** –Facilitating the responsible development of renewable energy resources on public lands is a cornerstone of the Administration's broad energy strategy. Due in large part to effective collaboration among the Federal agencies, the BLM successfully accomplished the Energy Policy Act of 2005's (EPAct) goal of authorizing over 10,000 megawatts (MWs) of renewable energy on public lands – three years ahead of schedule.

Since 2009, The BLM has approved significant utility-scale renewable energy generation and transmission projects, including 32 utility-scale solar facilities, 11 wind farms, and 12 geothermal plants, with associated transmission corridors and infrastructure to connect with established power grids. If fully built, these projects will provide more than 14,000 megawatts of power, or enough electricity to power nearly 5 million homes, and will provide over 20,000 construction and operations jobs. Further, in support of the President's Climate Action Plan to ensure America's continued leadership in clean energy, the BLM is continuing to work to reach 20,000 MWs of permitted renewable energy capacity on public lands by 2020.

Renewable energy projects authorized by the BLM constitute a major contribution not only to the nation's energy grid, but also to the national economy. Projects on public lands have already garnered an estimated \$8.6 billion in total capital investments, and the potential for approved projects pending construction is estimated at \$28 billion. Through efficient and environmentally-responsible permitting, the BLM is helping to bring tens of billions of dollars in investments to the United States economy.

The BLM is furthering these contributions by moving from an application-by-application approach for solar energy projects to a competitive leasing process in designated development areas called Solar Energy Zones (SEZs). In October 2012, the Department finalized the Western Solar Plan, a Solar Energy Programmatic Environmental Impact Statement that identified 17 SEZs and established a blueprint for fast track utility-scale solar energy permitting with access to existing or planned transmission infrastructure. On June 1, 2015, three projects within the Dry Lake SEZ in Nevada were approved and were the first to benefit from this streamlined permitting process. Using the expedited review process made available by the Western Solar Plan, reviews of these three projects were completed in less than 10 months; this is less than half the amount of time it took to review and approve projects under the previous system. The Western Solar Plan also provides the foundation for the BLM's current rulemaking process to implement competitive solar and wind energy leasing within designated areas.

In authorizing existing projects, reviewing proposed projects, and developing a competitive leasing rule, the BLM has focused on managing renewable energy development in an accelerated but environmentally sound and responsible manner to ensure the protection of landscapes, wildlife habitats, and other natural and cultural resources. This “smart from the start” approach is consistent with the Administration’s goal of authorizing environmentally sound and sustainable geothermal, wind, and solar energy projects on public lands. The BLM achieves these goals through close working relationships with local communities, state regulators, private industry, key stakeholders, and other Federal agencies.

**Energy Revenue** – The Department of the Interior manages the public lands and federal waters that provide resources critical to the Nation’s energy security; is responsible for collecting and distributing revenue from energy development; and ensures that the American taxpayer receives a fair return for development of those federal resources. Authorities to assess and collect penalties for violation of lease terms, permit conditions, regulations and orders are principally provided, for onshore production in the Federal Oil and Gas Royalty Management Act of 1982 (FOGRMA), and for offshore production in the Outer Continental Shelf Lands Act of 1953 (OCSLA). FOGRMA and OCSLA cover a broad array of violations, including oil spills.

**Energy and Water** – The Department recognizes the importance of the energy-water nexus and supports a closer level of communication and coordination between the Department of the Interior, Department of Energy and the broader federal community. The Department of the Interior appreciates the Committee’s leadership on the energy-water nexus issue. Energy and water issues intersect across a range of Interior activities, including hydropower generation, energy development, electricity generation, and water treatment, distribution, and conservation. Interior has a variety of programs that address the energy-water nexus, including USGS monitoring systems and research programs (including the National Water Census), Reclamation Basin Studies, and WaterSMART Grants. Understanding the value of interagency coordination, Interior has partnered with the Department of Energy and the Department of the Army (working with the U.S. Army Corps of Engineers) to recently renew the 2010 Memorandum of Understanding (MOU) to collaboratively address a host of energy-water nexus issues related to hydropower. By coordinating efforts, the signatory agencies have completed a number of projects that promote sustainable hydropower development, including hydropower resource assessments, unit-dispatch optimization systems, climate change studies, integrated basin-scale opportunity assessments, and funding opportunities to demonstrate new small hydropower technologies.

The Department is committed to integrating energy and water policies to promote the sustainable use of all resources, including incorporating water conservation criteria and the water/energy nexus into the Department’s planning efforts. On May 20, 2015, the Department announced that Reclamation will make \$24 million in WaterSMART Water and Energy Efficiency Grants available to 50 new and ongoing projects in the Western United States for activities such as conserving and using water more efficiently, increasing the use of renewable energy, improving energy efficiency, encouraging water markets, and carrying out activities to address climate-related impacts on water. Reclamation also announced that it will make \$23 million for seven water reclamation and reuse projects in California, and nearly \$2 million for seven water reclamation and reuse feasibility studies in California and Texas. These announcements support

the President's Climate Action Plan by providing tools for states and water users to create water supply resilience to meet future water and energy demands in the face of a changing climate.

Water and Energy Efficiency Grants and Basin Studies are part of the Department's WaterSMART Program. WaterSMART Grants provide cost-shared funding to States, tribes, and other entities with water or power delivery authority for water efficiency improvements, with additional consideration given to proposals that include energy savings as a part of planned water efficiency improvements. Water management improvements that incorporate renewable energy sources are also prioritized for WaterSMART Grant funding. These grants directly address the energy-water nexus and provide a concrete means of implementing on-the-ground solutions to energy-water issues. The FY 2014 Water and Energy Efficiency Grant projects are expected to conserve more than 67,000 acre-feet of water annually and 22.9 million kilowatt-hours of electricity — enough water for more than 250,000 people and enough electricity for more than 2,000 households.

In addition to long-standing USGS efforts in water supply and availability and in energy resource assessments and research, several of which are highlighted in the recently published USGS Circular 1407, "The Water-Energy Nexus—An Earth Science Perspective," and which provide an essential foundation for understanding issues related to the energy-water nexus, the USGS participates in a number of interagency efforts. The USGS has been working with the Energy Information Administration (EIA) since 2010 to improve estimates of water withdrawals and consumptive use associated with cooling water at thermoelectric generating plants across the Nation. Cooling water for such plants is the largest sector of water withdrawals in the United States, at 49% of all water withdrawals nationwide, according to USGS Circular 1344, Estimated Use of Water in the United States in 2005. A recent USGS report, Methods for Estimating Water Consumption for Thermoelectric Power Plants in the United States (Scientific Investigations Report 2013-5188), documents the model that the USGS developed with the assistance of the EIA for estimating electric generating plant water withdrawals and consumptive use, which are currently not consistently reported. This ground-breaking model, which incorporates the heat budget of each of the approximately 1,300 thermoelectric generating plants that rely on water for cooling, can be used both to estimate current and historical water use and to forecast future water use with different plant configurations and cooling water technologies.

In addition to the efforts above, the FY 2016 President's Budget requests an additional \$1.5 million for the USGS to provide water use grants to States that will increase availability and quality of water use data – including data related to water used for energy. These grants would provide financial resources, through State water resources agencies, to improve the availability and quality of water use data that they collect and would integrate those data with the USGS Water Census. Funding provided to States through these grants would be targeted at improvements to water use data collection and integration that will be of the greatest benefit to a national assessment of water availability and use. As the energy sector is a primary user of water, increased availability of water use information related to energy will be an important part of this effort.

In mid-April 2014, the USGS released an expanded and updated version of the USGS oil, gas, and geothermal Produced Waters Database and Map Viewer; the revised database contains

nearly 100,000 new samples from conventional and unconventional well types, including geothermal. The availability of more samples and more types of analyses will help farmers determine the quality of local produced water available for possible remediation and reuse, will enable local and national resource managers to track the composition of trace elements, and will help industry plan for waste-water injection and recycling.

Although industry interest in coalbed natural gas development has declined in recent years as development of shale gas resources elsewhere has grown, the Powder River Basin in northern Wyoming and southern Montana experienced a rapid expansion in the development of coalbed natural gas between 2002 and 2011. During this period, about 90 billion liters of water were produced annually in the Wyoming portion of the Basin as part of the extraction process. Produced waters from this development are moderately saline and have high proportions of sodium relative to calcium and magnesium, thus rendering the waters unsuitable for irrigation without treatment. USGS studies have examined the environmental impacts of different disposal options. Results indicated that infiltration impoundments had the potential to contaminate underlying fresh groundwater supplies, but that with specific treatment the produced waters could be used in subsurface drip irrigation operations that minimized potential for groundwater contamination and provided beneficial use of the waters to enhance agricultural production in this semiarid region.

Other Departmental programs and activities relate directly to the energy-water nexus, including hydropower development, water treatment and desalination, pumping and water delivery, BLM energy permitting, and USGS research on energy resources and induced seismicity. We are happy to provide the Committee with additional information on these programs as needed.

### **S. 15, Protecting States' Rights to Promote American Energy Security Act**

S. 15 amends the Mineral Leasing Act to prohibit the Department of the Interior from enforcing Federal regulations regarding hydraulic fracturing activities on any land in any state that has existing regulations on hydraulic fracturing. This deferral to state authority would occur regardless of the quality or comprehensiveness of the state rules, even if the rules are less protective or otherwise in conflict with Federal guidelines.

#### Analysis

The Department strongly opposes S. 15 as it would prevent the BLM from ensuring that hydraulic fracturing activities on public lands operate under consistent standards that provide an appropriate level of environmental protection. The increasing use of hydraulic fracturing on BLM lands, and the deployment of new drilling technologies, has necessitated that the BLM update its framework for managing the extraction of fluid minerals from the Federal and Indian mineral estate. The BLM's recently issued hydraulic fracturing rule – which becomes effective on June 24, 2015 – is the culmination of four years of work by the BLM that began in November 2010 when it held its first public forum on this topic. Since that time, the BLM has published two proposed rules and held numerous meetings with the public and state officials, as well as many tribal consultations and meetings. Informed by the experience of its experts and the technical expertise and concerns of state regulators, tribes, industry, and the public, the BLM's

hydraulic fracturing rule strengthens existing oversight procedures for hydraulic fracturing on lands where the BLM has permitting responsibilities and provides all stakeholders with additional assurance that operations are being carried out safely and responsibly.

The BLM has established and maintained regulations governing oil and gas operations on public lands for decades, and has worked successfully with operators, tribes and state governments to avoid duplication and delay in the enforcement and monitoring of these regulations. The implementation of the hydraulic fracturing rule will continue this longstanding practice while also ensuring the BLM satisfies its obligations to ensure federal standards are met. The BLM remains committed to working with states to ensure safe, responsible, and environmentally sound domestic oil and gas production, and recognizes the efforts of states that currently have hydraulic fracturing regulations.

Included in the final rule is a variance process that allows for the application of state and tribal standards on public lands where those standards meet or exceed those proposed by the rule. In addition, the BLM continues to reach out to states to establish new or build upon existing formal agreements regarding implementation of federal and state oil and gas rules. These agreements will leverage the strengths of existing partnerships, reduce duplication of efforts for agencies and operators, and implement the final rule as consistently as possible with state regulations, while fulfilling the Secretary's responsibilities mandated by statute as steward for the public lands and trustee for Indian lands. The BLM State Offices are meeting regularly with their state counterparts and have undertaken state-by-state comparisons of regulatory requirements in order to identify opportunities for variances and to establish Memorandums of Understanding (MOUs) that will realize efficiencies and allow for successful implementation of the rule. The BLM is in active discussions with: the North Dakota Industrial Commission; the Wyoming Oil and Gas Commission; and the states of Alaska, California, Colorado, New Mexico, Nevada, and Utah. The BLM also recently discussed the rule with state representatives at the Interstate Oil and Gas Compact Commission's meeting in Salt Lake City the week of May 18, 2015.

### **S. 1218, Nexus of Energy and Water for Sustainability Act of 2015**

S. 1218, Nexus of Energy and Water for Sustainability Act of 2015 would create a Committee or Subcommittee on Energy-Water Nexus for Sustainability under the National Science and Technology Council (NSTC), co-chaired by the Secretary of Energy and Secretary of the Interior and require the Office of Management and Budget to submit a crosscut budget report on research, development and demonstration activities to advance energy-water nexus related science and technologies. The Department of the Interior shares the Committee's goals to promote coordination between Federal agencies as it relates to the energy-water nexus. We note that the Department is already working on the energy-water nexus through several interagency bodies and federal processes- for example through the Natural Drought Resilience Partnership and the Build America Initiative. The Department also has a number of existing programs that address many of these energy-water nexus issues, and that many of the activities called for in S. 1218 are within the scope of existing authorities available to the Department of the Interior, and the Administration as a whole. Some of the existing programs are summarized below.

Section 3 of S. 1218 requires the Director of the Office of Science and Technology Policy to establish either a Committee or Subcommittee on the Nexus of Energy and Water for

Sustainability under the NSTC, co-chaired by the Secretary of Energy and Secretary of the Interior. The Committee or Subcommittee is directed to: (1) serve as a forum for developing common federal goals and plans on energy-water nexus research, development, and demonstration activities; (2) issue a strategic plan on energy-water nexus research, development, and demonstration activities priorities and objectives, (3) promote coordination of the activities of federal departments and agencies on energy-water nexus research, development, and demonstration activities; (4) coordinate and develop capabilities and methodologies for data collection, management, and dissemination of information related to energy-water nexus research, development, and demonstration activities from and to other federal departments and agencies; and (5) promote information exchange between federal departments and agencies. Reclamation, USGS, and the Army Corps of Engineers recently identified common research priorities in water resources infrastructure resilience, threatened and endangered species, and measuring and monitoring for knowledge extraction.

Section 4 of S. 1218 requires the Director of the Office of Management and Budget to submit to Congress a report that includes an interagency budget crosscut that displays at the program, project, and activity level for each of the Federal agencies that carry out or support basic and applied research, development, and demonstration activities to advance the energy-water nexus related science and technologies in the President's budget request, expenditures and obligations for the prior fiscal year, and estimated expenditures and obligations for the current fiscal year.

The Department appreciates the Committee's leadership and the opportunity to strengthen capabilities to address the energy-water nexus. Given the breadth and many facets of this issue, we support close collaboration with the DOE and other Federal agencies. Moving forward, we would like to continue working with the Committee to ensure sufficient interagency collaboration and information sharing to support sound decision-making, leverage resources, and reduce duplication. The Administration believes this can be done through more effective and efficient collaboration and program management utilizing existing authorities.

If enacted, it is the Department's view that the committee or subcommittee created under S. 1218 should focus its attention on key vulnerabilities where there is an appropriate federal role and capability to have a positive impact. It is the Department's view that that focus should be on data gaps associated with water use and availability. We appreciate that the Committee narrowed the focus of S. 1218 to focus on energy-water nexus research, development and demonstration activities, and we look forward to working with you to ensure adequate coordination.

Water availability, severe drought, and long-term climate trends have always posed a significant risk to energy development and electric generation. This is one of the broad, systemic risks at the core of the energy-water nexus. Decreased water availability, prolonged drought, and more pronounced climate trends could increase that risk and require the use of accelerated adaptation strategies.

The Department supports the type of coordination and data exchange encouraged under S. 1218 and is already undertaking a number of steps to do so as discussed in the testimony above. Such

efforts could help close existing gaps, increasing our understanding of water supply availability to benefit water and energy decision makers.

While S. 1218 allows for the coordination of federal activities, the Department would like to stress the importance of providing the scientific community with autonomy to design and execute studies. Finally, States play the key role in allocating and administering water, and they must be a partner in energy-water efforts. S. 1218 does not address the important relationships with states and the private sector, where significant work on energy-water nexus projects is accomplished.

The Department shares the Committee's goals to promote coordination between Federal agencies as it relates to the energy-water nexus. We appreciate the leadership of this Committee in engaging Federal agencies. The Department has numerous programs in place that encourage coordination not only within the Federal Government, but as public-private partnerships. These and other existing authorities can provide more effective and efficient collaboration and program management related to energy-water nexus challenges and opportunities. The Federal Government has a role in providing leadership and tools to address the challenges of imbalance between supply and demand. Sustainable water supplies and energy use are important parts of a stable economic base, employment continuity, and smart growth.

### **S. 1230, Memoranda of Understanding with State Oil & Gas Programs**

S. 1230 directs the Secretary of the Interior to establish a program in which the BLM Director, at the request of a State Governor, would establish a Memorandum of Understanding (MOU) with that state to develop rules and processes for certain oil and gas inspection activities on Federal lands. These activities would include the measurement of oil and gas production, inspection of meters or other measurement methodologies, and other operational activities deemed appropriate by the Secretary. To be eligible for such an MOU with the BLM, the Secretary must determine the state's oil and gas program is sufficient to fulfill the oversight and enforcement responsibilities of the BLM.

#### Analysis

The BLM has a longstanding practice of working in partnership with state governments and other partners to enhance public lands and carry out its multiple-use mission. In the oil and gas context, we have memorialized this practice in MOUs with state governments, including CA, CO, MT and WY, which date back as far as 1990. These MOUs recognize the interests, expertise, and jurisdictional responsibilities of both the BLM and our state partners and typically outline respective authorities, roles, and responsibilities. The existing MOUs address issues such as well spacing, surface operations, and data sharing.

In recent years, we have been actively engaged in discussions with State Governors and their respective oil and gas officials to seek ways to further increase efficiencies by developing updates to or establishing new MOUs that will facilitate the efficient oversight of oil and gas operations in those states. The goal of these MOUs is to provide for an effective and coordinated oil and gas application and permitting/approval process. We are in active discussions and have

been meeting regularly with: the North Dakota Industrial Commission; the Wyoming Oil and Gas Commission; and the states of Alaska, California, Colorado, New Mexico, Nevada, and Utah. With respect to the recent hydraulic fracturing rule, these discussions have involved state-by-state comparisons of regulatory requirements in order to identify opportunities for variances and to establish MOUs that will realize efficiencies and allow for the successful implementation of the rule.

That said, the BLM cannot support S. 1230's proposed delegation of the BLM's stewardship responsibilities to state officials. While it is common practice for the BLM to enter into an MOU with states to help achieve better coordination among their respective oil and gas programs, such agreements do not revoke or modify the BLM's obligation to make certain final decisions concerning oil and gas operations on Federal and Indian lands. The BLM regulates oil and gas operations on Federal lands, and on Indian lands held in trust by the Federal government, pursuant to the requirements of several statutes, including the Mineral Leasing Act, the Mineral Leasing Act for Acquired Lands, the Federal Land Policy and Management Act, the Indian Mineral Leasing Act, and the Indian Mineral Development Act.

To ensure the various BLM obligations established by these statutes are met the state-run program envisioned by the bill would still require Federal oversight to ensure Federal responsibilities, including the Secretary's trust responsibilities to the tribes, are being met consistently from state-to-state. The necessary oversight could, instead of creating efficiencies, create an additional layer in the administration of oil and gas operations on public lands. This would result in potential duplication of efforts and additional costs to the taxpayer. S. 123 is silent in regards to how such a state program would be funded.

The highest priority of the BLM oil and gas program is ensuring that the operations it authorizes on public and tribal lands are safe and environmentally responsible. We have established and maintained regulations governing oil and gas operations on public lands for decades, and have worked successfully with operators and in partnership with tribes and state governments to avoid duplication and delay in the enforcement and monitoring of these regulations. The BLM continues to advocate for further coordination with its state partners to maximize efficiency in oil and gas operations on public lands, but does not agree that a legislative remedy is necessary to accomplish our common goals. Instead, the agency believes the best and most efficient results can be achieved by BLM state and field offices working directly with their partners at the state government level to ensure the applicable Federal standards and statutory requirements are met. Ideally the state and Federal partners enter into agreements as appropriate to address the operational activities in the field to ensure that BLM and state oversight responsibilities are met as efficiently as possible.

With respect to the bill's direction that consistent rules be established, it should be noted that the BLM's existing regulatory framework governing oil and gas operations on the lands and mineral resources it manages is robust and longstanding. The BLM's rules were developed consistent with the applicable statutes and have been periodically updated based on BLM's extensive experience in this area. These rules govern operations in over 30 states and were designed to support responsible development using a consistent set of standards across all of the lands managed by the BLM. S. 1230 would create a significant administrative burden as both state and

federal regulations would likely require an extensive overhaul and revisions to achieve that objective; a process that would take a substantial amount of time.

### **1310, Deficit Reduction Through Fair Oil Royalties Act**

In the previous decade, the Minerals Management Service (MMS), the bureau in the Department then charged with managing energy development on the Outer Continental Shelf, discovered that leases issued in the four offshore lease sales held in 1998 and 1999 did not include price thresholds to cut off royalty relief mandated by section 304 of the 1995 Deepwater Royalty Relief Act (DWRRA). (Consistent with the MMS interpretation of the DWRRA, price thresholds were included in the leases issued in the lease sales held in 1996, 1997, and 2000.) The Department subsequently entered into negotiations with the holders of the 1998 and 1999 leases to amend their leases to include price thresholds on royalty relief and successfully came to agreements with several companies. In the meantime, however, several lessees sued to challenge the legality of the royalty relief price thresholds included in the 1996, 1997, and 2000-issued leases, arguing that the price thresholds did not apply to the mandated royalty relief volumes in the DWRRA. Both the prior Administration and the current Administration disagreed with this interpretation of the DWRRA. Unfortunately, the lessees prevailed in district court, and the price thresholds included in the leases were declared legally invalid. The district court opinion was upheld by the 5<sup>th</sup> Circuit Court of Appeals, and in 2009, this Administration appealed that decision to the Supreme Court, which declined to hear the case.

As a result of the court's decision, successfully negotiated agreements were voided and ongoing administrative attempts to negotiate to amend those leases that did not include prices thresholds have been precluded.

S. 1310 would prohibit the acquisition of new oil or natural gas leases or any interest in existing leases in the Gulf of Mexico by certain persons unless they meet certain conditions. Specifically, it would disallow acquisition by parties that did not agree to renegotiation of existing leases issued between 1996 and 2000 subject to congressionally mandated royalty relief under the 1995 DWRRA. The bill seeks to encourage holders of DWRRA leases to renegotiate their leases to incorporate the price thresholds that the courts had found invalid.

The Administration continues to pursue actions to ensure a better return to taxpayers from oil and gas development both onshore and offshore in a way that ensures a level playing field in the sale and development of public resources. We note that the FY 2016 President's Budget contains a package of administrative and legislative oil and gas management reforms that would encourage diligent development of Federal energy resources as well as provide a fair return to the taxpayer. These royalty and other reforms are estimated to generate \$2.5 billion in savings to the Treasury over 10 years. The Administration is working to implement the administrative components of this package where it has the flexibility to do so. We would like to work with the sponsor and the Committee on the legislative components of this package.

### **S. 1311, the Oil Spill Deterrent Act**

S. 1311 amends the Federal Oil and Gas Royalty Management Act of 1982 (FOGRMA) and the Outer Continental Shelf Lands Act of 1953 (OCSLA), providing increased penalty authority

intended to deter oil spills. The Department supports the goal of deterring oil spills, and would like to work with the Committee in furtherance of this goal.

### Analysis

#### *Penalties Authorized by the Federal Oil and Gas Royalty Management Act*

Section 109 of FOGRMA authorizes the Department of the Interior to issue civil penalties when companies fail to comply with applicable rules, regulations and lease terms. Codified in 30 U.S.C. 1719, the authority includes escalated civil penalties for companies that fail to take corrective action, and those that knowingly or willfully violate applicable regulations or laws.

As drafted, the maximum penalty increases provided in Section 2 of S. 1311 would apply to the entire range of violations covered by 30 U.S.C. 1719, the majority of which have no association with drilling or oil spills. While the Department supports to increased administrative flexibility to issue tougher penalties for violations, it is worth noting that the legislation as drafted could have unintended outcomes. For example, the Department notes that increasing the civil penalty amount for failure to take corrective action from \$5,000 to \$100,000, would leave FOGRMA, as amended, with a penalty scheme that authorizes smaller maximum civil penalties (\$10,000 and \$25,000 respectively) for more egregious knowing or willful violations.

The Department supports increasing the maximum civil penalties for all violations in order to provide more realistic deterrent benefits while maintaining the Secretary's discretion to levy civil penalties below the maximum, if appropriate.

#### *Penalties Authorized by the Outer Continental Shelf Lands Act*

The Outer Continental Shelf Lands Act of 1953 (OCSLA) authorizes the Department of the Interior to issue civil penalties of up to \$20,000 per day when companies fail to comply with applicable regulations or laws or with any term of a lease or permit issued pursuant to OCSLA. OCSLA also directs the Secretary of the Interior to adjust the maximum civil penalty amount at least once every three years to reflect any increase in the Consumer Price Index prepared by the U.S. Department of Labor. Through these periodic adjustments, the current maximum civil penalty is \$40,000 per day. Section 3 of S. 1311 substantially increases the maximum penalty from \$20,000 per day to \$250,000 per day for violations and authorizes the Secretary to increase the maximum, after notice and an opportunity for public comment.

While the proposed changes to OCSLA may be broader than necessary to address oil spills, the new authority would authorize increased civil penalties for the entire range of violations covered by 43 U.S.C. 1350. The Department supports increasing the maximum civil penalties for all violations in order to provide more realistic deterrent benefits while maintaining the Secretary's discretion to levy civil penalties below the maximum, if appropriate.

### **S. 1340, Coal Oversight and Leasing Reform Act of 2015**

S. 1340 would amend the Mineral Leasing Act to establish a new Federal coal leasing program and make various changes to current coal leasing practices. These changes include new requirements to be used in the determination of fair market value for coal leases, increased

royalty and rental rates, and shorter lease terms. The bill also imposes a moratorium on new leases until the new program has been fully implemented.

The Department appreciates the work of the sponsor on these issues. We have recently undertaken a major effort to strengthen the management of coal production on public lands by issuing updates to our Coal Evaluation Manual and Handbook. Additionally, the BLM will be further engaging with stakeholders and the public to discuss how the BLM can best carry out its responsibility to manage coal production on public lands, and help to ensure that taxpayers receive a fair return from the development of these public land resources. Consistent with these efforts, we would like to continue discussions with the sponsor and the Committee on how best to continue these program improvements.

#### *Federal Coal Leasing Program*

S. 1340 (Sec. 10) establishes a new Federal coal leasing program. As currently written, the leasing program would require the Secretary to establish and approve a 5-year leasing plan. The leasing program would have to ensure FMV and maximize both competition for leases and a fair return to the U.S. taxpayer. S. 1340 directs the Secretary to solicit comments from Federal and state agencies and the public, and establishes a timeframe for government officials to review and comment before publication of the leasing plan. The bill provides that the Secretary can only lease those parcels that are included in an approved 5-year leasing plan. The bill also would require the Department to issue regulations to implement the new lease program within 180 days of enactment, and to publish the first leasing plan within 270 days of enactment.

The Department supports the goal of improving the BLM's management of the Federal coal program, but notes that it is important to assess fully the effects of the proposals included in Section 10 on the program's efficiency and ultimately the return to the U.S. taxpayer. We are committed to working closely with the sponsor and the Committee on any legislative changes that are needed to strengthen the management of coal production on public lands.

#### *Lease Terms & Lease Modifications*

S. 1340 (Sec. 12) reduces the primary term of a lease from 20 years to 10 years; the diligent development period from 10 years to five years; the renewal terms of a lease from 10 years to five years, and the period for advanced royalty payments from 20 years to 10 years. S. 1340 (Sec. 9) reduces the maximum size of a lease modification from 960 acres to 160 acres, requires a FMV determination for lease modifications (Sec. 7), and specifies that lease modifications cannot result in a decrease in revenue (Sec. 8). Lease modifications were limited to 160 acres prior to the Energy Policy Act of 2005, and S. 1340 would reinstate that limit. We are open to further discussion and analysis of these issues.

#### *Revenues*

S. 1340 raises the minimum royalty rate for coal and onshore oil and gas production from 12.5 percent to 18.75 percent (Sec. 13), and the rental rate for coal leases from \$3 per acre per year to no less than \$100 per acre per year (Sec. 11). S. 1340 (Sec. 2) also repeals the option for five equal deferred bonus payments. With respect to oil and gas, the Department notes that it has issued an Advanced BLM Notice of Proposed Rulemaking asking the public for input on potential changes to the BLM's royalty rate regulations. The comment period on that notice closes on

June 19, 2015. The Department is interested in working with the sponsor and the Committee to determine the appropriate royalty, rental rates, and other related revenues, and plans to engage stakeholders further on this topic in the very near future.

#### *Fair Market Value*

S. 1340 (Sec. 5) includes new requirements to determine FMV. The bill requires that the export potential of coal be considered in the FMV determination, and that the Secretary is not to accept any bids for a lease that is less than FMV. Finally, S. 1340 requires the GAO to complete an audit two years after enactment to determine whether the Secretary has complied with the FMV determination requirements.

The Department shares the goal of S. 1340 to capture FMV of leased coal, and the BLM has recently made improvements to its presale estimate process. In December 2014, the BLM published a new Coal Evaluation Manual and a new Coal Evaluation Handbook following the recommendations of GAO and OIG audits. The Coal Manual and Handbook enhance the evaluation process, while ensuring there is adequate and appropriate accounting for coal exports, with a consistent application throughout the BLM. There is also greater transparency, including an independent third-party review of each coal evaluation by the Department's Office of Valuation Services. Taken together, these enhancements will result in more thorough and better-documented coal evaluations for the benefit of the taxpayer. Finally, existing BLM rules provide that the BLM will reject bids that are less than the presale estimated FMV.

#### *Inspection & Enforcement*

S. 1340 (Sec. 14) requires the development of new regulations to ensure consistent and effective inspection and enforcement by providing additional national oversight of state inspections; standardizing the BLM inspection and enforcement practices; requiring that inspections and enforcement data be stored in a central database; and requiring periodic unannounced inspections. S. 1340 (Sec. 15) also provides the BLM with the authority to assess civil penalties of up to \$100,000 per incident per day. The Department supports establishing the authority to assess civil penalties per incident per day which would provide a useful tool to encourage compliance with applicable coal statutes and regulations. We are interested in working with the sponsor and the Committee to further develop potential improvements to the BLM's inspection and enforcement program.

#### *Additional Provisions*

Other proposals in S. 1340, include: a confidentiality requirement for consultants (Sec. 3); the requirement for licensees to provide an assertion of accuracy for data developed for exploration licenses (Sec. 4); and the requirement to make coal lease data publicly available (Sec. 6). In each instance, these issues have been addressed by existing BLM or Office of Natural Resources Revenue (ONRR) rules, policies, and guidance, including the recently updated Evaluation Handbook and Manual. While the BLM and ONRR have already addressed these issues administratively, BLM is interested in working with the sponsor and the Committee to provide greater transparency regarding its management of the Federal coal program.

### **S. 1407, Public Land Renewable Energy Development Act**

S. 1407 seeks to expedite the development of geothermal, wind, and solar energy projects on Federal lands managed by the Departments of the Interior and Agriculture by designating priority and other variance development areas in Bureau of Land Management (BLM) Resource Management Plans (RMPs), and establishing interagency coordination procedures. The bill also reestablishes a special account for processing geothermal energy authorizations, establishes a royalty system for wind and solar energy authorizations, and creates a conservation fund to address impacts of wind and solar energy development on public lands. The bill's provisions are directed toward public lands that have not been excluded from geothermal, solar or wind energy development through BLM RMPs or Federal law. This statement addresses the provisions relevant to the Department.

The Department and the BLM are committed to responsibly mobilizing the tremendous renewable energy resources available on public lands, and share the Committee's interest in identifying efficiencies in the development of those resources that are consistent with our multiple use and sustained yield mandate under the Federal Lands Policy and Management Act, environmental protection, and public involvement in agency decision-making. The Department supports the goals of S. 1407, and is already utilizing administrative authorities to implement the Western Solar Plan and to expand wind and geothermal development opportunities on public lands where appropriate. We are pleased to continue to work with the Committee and the sponsor to further harness the vast renewable resources on public lands while continuing to ensure a fair return to U.S. taxpayers.

### Analysis

#### *Land Use Planning, Environmental Review, & Permit Coordination*

S. 1407 (Title II, Sec. 202) requires that within five years BLM update existing land use plans to establish priority and other "variance" areas for geothermal and wind energy development. The bill acknowledges that the BLM completed a wind energy programmatic EIS and land use planning effort in 2005, completed a geothermal programmatic EIS and land use planning effort in 2008, and completed a solar energy programmatic EIS and land use planning in 2012. The BLM's wind energy land use plan identified exclusion areas but did not identify priority or variance areas for wind development. The geothermal planning effort involved both BLM public lands and National Forest System lands that were available and open for geothermal leasing, however, did not designate priority or variance areas for geothermal development. Finally, the BLM's solar energy planning effort designated exclusion lands as well as priority and variance areas for development.

The Department shares goals similar to those advanced by Section 202 and, through its existing authorities, is currently developing a competitive leasing program for solar and wind energy projects on public lands. As part of the Western Solar Plan, the BLM recently completed a successful competitive leasing auction in the Dry Lake SEZ in Nevada, which resulted in \$5.8 million in high bids. Building on the success of the Dry Lake auction, the BLM published a Proposed Rule for a competitive leasing program for wind and solar in September 2014 and expects to publish a Final Rule before the end of the year. This rule will give additional detail to the competitive leasing program for the solar and wind energy programs. The land use planning

requirements as outlined by S. 1407 would require significant time and resources and substantial public involvement if applicable to all BLM lands throughout the West. We would like to work with the sponsor and the Committee on coordinating the Department's existing efforts with those identified in the bill.

S. 1407 (Title II, Sec. 203) directs that in some cases additional review under the National Environmental Policy Act (NEPA) may not be required for renewable energy projects. It is the BLM's responsibility to complete an appropriate analysis of these types of activities before they are undertaken. The BLM believes analysis under NEPA allows for the reasoned consideration of the environmental effects of renewable energy projects and provides opportunity to consider alternatives with less adverse impacts on communities and the environment. Failure to complete an adequate NEPA review reduces transparency in agency decision-making and would impact our ability to identify relevant and useful information for consideration by the public and by the BLM as a decision-maker.

S. 1407 (Title II, Sec. 204) establishes a program to improve renewable energy permit coordination that is similar to the process BLM used to establish oil and gas permitting offices under the provisions of the EAct of 2005. Combined with increased overall funding, this process has helped to focus and coordinate resources to improve permitting for oil and gas development. Following this model, the BLM has already established renewable energy coordination offices in several state and field offices that have a significant renewable energy workload. While we support the general concept to expedite interagency coordination, it may be more advantageous to utilize existing renewable energy coordination offices and establish an interagency renewable energy team in those additional states with the highest expected renewable energy workload. The BLM should have the flexibility to adjust these offices in the future to adapt to emerging renewable energy workloads across the West. The BLM would like to work with the sponsor and Committee to discuss how best to achieve these goals.

### *Revenue & Enforcement*

The Department also shares the goal of S. 1407 to capture the fair market value of leased projects as part of its commitment to ensure an appropriate return to U.S. taxpayers. While the BLM currently ensures a fair return to the public from solar and wind energy authorizations through an annual acreage rent and MW capacity fee, the agency is also supportive of efforts which could improve and simplify how that return is captured.

S. 1407 (Title I, Sec 101) amends the EAct of 2005 to reestablish the geothermal special account, which expired in 2010, through Fiscal Year 2020 to provide funds for the processing of geothermal leases and use authorizations. Under current law, 50 percent of geothermal revenues are directed to the state in which the project is located, with the remaining funds divided evenly between the county in which the project is located and the Treasury. Under S. 1407, the states would continue to receive 50 percent of geothermal revenues; while the BLM would receive an amount subject to appropriation and without fiscal year limitation from the total directed to the Treasury. The BLM estimates the proposed special account would shift approximately \$4 million per year from the general Treasury to supplement discretionary appropriations that currently total roughly \$7 million annually. The Department has generally proposed funding geothermal program operations through a combination of cost recovery fees and the regular appropriations

process. We have concerns about the redirection of Federal receipts traditionally deposited in the Treasury toward this special-purpose account. We look forward to working with this Committee and the Interior appropriations committees in evaluating appropriate funding options for the geothermal leasing program.

S. 1407 (Title II, Section 212) provides for the allocation of all revenues from solar and wind energy authorizations to states (25 percent), counties (25 percent), a new Renewable Energy Resource Conservation Fund (35 percent and increasing after 15 years), and the U.S. Treasury (15 percent and decreasing after 15 years). Under the bill, funds deposited in the U.S. Treasury are to be directed to the BLM or other Federal or state agencies to assist in the processing of renewable energy permits for 15 years, after which the 15 percent is decreased incrementally each year and redirected to the new Conservation Fund. Currently all such revenues from solar and wind energy authorizations on public lands go to the U.S. Treasury. As written, the bill would limit expenditure of funds from the Renewable Energy Conservation Fund to fish and wildlife habitat issues, and access related to fishing, hunting and other forms of outdoor recreation.

The S. 1407 (Title II, Section 213) directs the Secretary of the Interior, in consultation with the Secretary of Agriculture, to establish royalties based on a percentage of the gross proceeds from the sale of MW production. The Department is concerned, however, that the royalty system would not provide a fair return from projects during periods without electric generation. We recommend the Committee consider additional language that would provide for a revenue collection system covering all phases of project development and operation, and also provide some guidelines on the appropriate range of royalty. The Department also wants to note that the current fee structure encourages a limited footprint; by implementing a similar structure for royalties, this key benefit could be reflected in the royalty system. The Department is glad to work with the sponsor and the Committee on exploring appropriate measures to ensure fair return to taxpayers from solar and wind projects' use of public lands.

S. 1407 (Title II, Section 214) would require the development of a comprehensive inspection, collection, fiscal, and production accounting and auditing system by the BLM and Department's Office of Natural Resources Revenue. Replacing the existing annual acreage and MW capacity fee with the system necessary to accurately determine royalties would require the Department to collect, track, and audit significantly different types of information from what is currently collected. The Department would need additional time and resources to develop a robust royalty auditing system capable of ensuring a fair return. The Department looks forward to working with the sponsor and the Committee to determine the best way to meet the revenue capturing objectives of the legislation without creating significant new administrative costs and burdens for the Department.

S. 1407 (Title II, Section 217) would require the Department to carry out a study of mitigation banking on Federal lands. Under Secretary's Order 3330, the Department has been working to update its policies and program direction with regard to landscape-level mitigation. While we believe that mitigation banking is an important tool for offsetting the unavoidable impacts of certain developments on the natural and cultural resources on public lands, we believe a separate study on mitigation banking would be duplicative of ongoing efforts to improve and expand

opportunities for mitigation at this time, including mitigation banking, the establishment of credit exchanges, and other tools being developed by states, private partners, and the Federal agencies. We would prefer to incorporate this review into our ongoing mitigation efforts.

Finally, S. 1407 (Title II, Section 218) of the bill would revoke the rental fee exemptions provided under the Rural Electrification Act (REA) for solar and wind projects with a capacity of 20 MWs or more. While the BLM has not yet approved any eligible projects under the REA, future projects may qualify for rental exemptions under existing authorities. The BLM supports the removal of the rental fee exemption as provided under S. 1407.

### **Conclusion**

Thank you for inviting the Department to submit its views on S. 15, S. 1218, S. 1230, S. 1310, S. 1311, S. 1340, and S. 1407. The Department of the Interior is committed to supporting the responsible supply of energy for our nation.

Dear Fellow Nevadan,

President Barack Obama will lead the nation's foremost clean energy conversation as the keynote speaker during the "[National Clean Energy Summit 8.0: Powering Progress](#)" at [Mandalay Bay Resort Convention Center](#) in Las Vegas Monday, Aug. 24. In its eighth year, the annual summit brings together clean energy advocates, business leaders, students, public officials and decision makers to discuss solutions for the advancement of the clean energy economy. To register for Summit 8.0 and for the latest information about the panels and panelists, please visit [www.cleanenergysummit.org](http://www.cleanenergysummit.org)

I have so much affection and admiration for President Obama and we are thrilled to welcome him to participate in this year's summit. President Obama's record on clean energy and climate stands above all others. His administration has made the largest investment in clean energy in American history and there is no place better than Nevada to discuss how we will continue this progress.

Under the direction of President Obama, the United States is leading global efforts to address the threat of climate change, while making great strides domestically by increasing the use of wind, geothermal and solar power, and reducing carbon emissions in record numbers. During the summit, President Obama and other clean energy visionaries will discuss topics such as securing greater energy independence, empowering Americans to develop existing clean energy resources and job creation through renewable energy initiatives.

I look forward to an enthusiastic dialogue on how Americans can continue to build a 21st century clean energy future and hope you can join us.

To learn more about my work in the Senate on behalf of Nevadans or to contact me, please visit <http://www.reid.senate.gov>, sign up for my e-newsletter, [The Reid Report](#), or connect with me on [Facebook](#) and [Twitter](#).

Sincerely,

**HARRY REID**  
U.S. Senator for Nevada

Dear Fellow Nevadan,

President Barack Obama will lead the nation’s foremost clean energy conversation as the keynote speaker during the “[National Clean Energy Summit 8.0: Powering Progress](#)” at [Mandalay Bay Resort Convention Center](#) in Las Vegas Monday, Aug. 24. In its eighth year, the annual summit brings together clean energy advocates, business leaders, students, public officials and decision makers to discuss solutions for the advancement of the clean energy economy. To register for Summit 8.0 and for the latest information about the panels and panelists, please visit [www.cleanenergysummit.org](http://www.cleanenergysummit.org)

I have so much affection and admiration for President Obama and we are thrilled to welcome him to participate in this year’s summit. President Obama’s record on clean energy and climate stands above all others. His administration has made the largest investment in clean energy in American history and there is no place better than Nevada to discuss how we will continue this progress.

Under the direction of President Obama, the United States is leading global efforts to address the threat of climate change, while making great strides domestically by increasing the use of wind, geothermal and solar power, and reducing carbon emissions in record numbers. During the summit, President Obama and other clean energy visionaries will discuss topics such as securing greater energy independence, empowering Americans to develop existing clean energy resources and job creation through renewable energy initiatives.

I look forward to an enthusiastic dialogue on how Americans can continue to build a 21st century clean energy future and hope you can join us.

Dear Fellow Nevadan,

President Barack Obama will lead the nation’s foremost clean energy conversation as the keynote speaker during the “[National Clean Energy Summit 8.0: Powering Progress](#)” at [Mandalay Bay Resort Convention Center](#) in Las Vegas Monday, Aug. 24. In its eighth year, the annual summit brings together clean energy advocates, business leaders, students, public officials and decision makers to discuss solutions for the advancement of the clean energy economy. To register for Summit 8.0 and for the latest information about the panels and panelists, please visit [www.cleanenergysummit.org](http://www.cleanenergysummit.org)

I have so much affection and admiration for President Obama and we are thrilled to welcome him to participate in this year’s summit. President Obama’s record on clean energy and climate stands above all others. His administration has made the largest investment in clean energy in American history and there is no place better than Nevada to discuss how we will continue this progress.

Under the direction of President Obama, the United States is leading global efforts to address the threat of climate change, while making great strides domestically by increasing the use of wind, geothermal and solar power, and reducing carbon emissions in record numbers. During the summit, President Obama and other clean energy visionaries will discuss topics such as securing greater energy independence, empowering Americans to develop existing clean energy resources and job creation through renewable energy initiatives.

I look forward to an enthusiastic dialogue on how Americans can continue to build a 21st century clean energy future and hope you can join us.

To learn more about my work in the Senate on behalf of Nevadans or to contact me, please visit <http://www.reid.senate.gov>, sign up for my e-newsletter, [The Reid Report](#), or connect with me on [Facebook](#) and [Twitter](#).

Sincerely,

HARRY REID  
U.S. Senator for Nevada

 ABOUT    ISSUES & ACCOMPLISHMENTS    SERVICES FOR NEVADANS    NEWS & EVENTS

United States Senator Harry  Reid

Share this on:    

August 1, 2015

Dear Fellow Nevadan,

President Barack Obama will lead the nation's foremost clean energy conversation as the keynote speaker during the "[National Clean Energy Summit 8.0: Powering Progress](#)" at [Mandalay Bay Resort Convention Center](#) in Las Vegas Monday, Aug. 24. In its eighth year, the annual summit brings together clean energy advocates, business leaders, students, public officials and decision makers to discuss solutions for the advancement of the clean energy economy. To register for Summit 8.0 and for the latest information about the panels and panelists, please visit [www.cleanenergysummit.org](http://www.cleanenergysummit.org)

I have so much affection and admiration for President Obama and we are thrilled to welcome him to participate in this year's summit. President Obama's record on clean energy and climate stands above all others. His administration has made the largest investment in clean energy in American history and there is no place better than Nevada to discuss how we will continue this progress.

Under the direction of President Obama, the United States is leading global efforts to address the threat of climate change, while making great strides domestically by increasing the use of wind, geothermal and solar power, and reducing carbon emissions in record numbers. During the summit, President Obama and other clean energy visionaries will discuss topics such as securing greater energy independence, empowering Americans to develop existing clean energy resources and job creation through renewable energy initiatives.

I look forward to an enthusiastic dialogue on how Americans can continue to build a 21st century clean energy future and hope you can join us.

To learn more about my work in the Senate on behalf of Nevadans or to contact me, please visit <http://www.reid.senate.gov>, sign up for my e-newsletter, [The Reid Report](#), or connect with me on [Facebook](#) and [Twitter](#).

Sincerely,

HARRY REID  
U.S. Senator for Nevada

---

"National Clean Energy Summit 8.0: Powering Progress" is co-sponsored by [U.S. Senator Harry Reid](#), [Center for American Progress](#), the [Clean Energy Project](#), [MGM Resorts International](#) and the [University of Nevada, Las Vegas](#). Past speakers at the annual summit include Hillary Clinton, Bill Clinton, Joe Biden, Arnold Schwarzenegger, Elon Musk and many more. Sen. Harry Reid, John Podesta and Secretary Ernest Moniz will join President Obama as speakers at this year's summit, with additional speakers and details about panels to follow.

**WHAT:** "National Clean Energy Summit 8.0: Powering Progress"

**WHO:** **President Barack Obama**, 44<sup>th</sup> President of the United States  
John Podesta, former Counselor to President Barack Obama  
Secretary Ernest Moniz, Secretary of Energy  
Dan Klaidt, Chancellor of the Nevada System of Higher Education (NSHE)  
Diarmuid O'Connell, Vice President of Business Development at Tesla Motors  
Jamie Evans, Managing Director at Panasonic Eco Solutions  
Dr. Ellen Williams, Director of the Advanced Research Projects Agency–Energy (ARPA-E)  
Thomas Voss, Chairman of Smart Wires  
Amy Ericson, Country President for the United States at Alstom  
Susan Kennedy, CEO and Board Member of Advanced Microgrid Solutions  
Neera Tanden, President of the Center for American Progress  
Bill Ritter, Former Governor of Colorado  
Antonio Villaraigosa, Former Mayor of Los Angeles  
Nancy Pfund, Founder and Managing Partner of DBL Investors  
Geisha Williams, President of Electric Operations at Pacific Gas and Electric Company

**WHEN:** Monday, Aug. 24, 2015  
9 a.m. – 6 p.m.

**WHERE:** Mandalay Bay Resort Convention Center  
3950 S. Las Vegas Blvd. Las Vegas, NV 89119

**REGISTER:** To register for Summit 8.0 and for the latest information about the panels and panelists, please visit [www.cleanenergysummit.org](http://www.cleanenergysummit.org)

**U.S. Senate Committee on Energy and Natural Resources  
April 30, 2015 Hearing: BLM Hydraulic Fracturing Rule  
Questions for the Record Submitted to the Honorable Neil Kornze**

**Questions from Senator John Barrasso**

**Question 1:** The Bureau of Land Management’s final rule on hydraulic fracturing says that: “The BLM believes that there will be no financial impacts to the states as a result of this rule.” It goes on to say that: “the BLM does not believe that production from Federal lands will be reduced as a result of this rule. Therefore, a Federalism assessment is not required.” At the hearing, I asked you: (1) whether BLM relied on any empirical data to show that a rule of this significance would not reduce oil and gas production on federal lands; and (2) if BLM did not rely on empirical data, what is the basis for BLM’s finding that the rule will not reduce oil and gas production on federal lands?

In response, you indicated that you would provide a written answer to this question. I look forward to your answer.

**Question 2:** BLM has not issued a final environmental impact statement (EIS) for an oil and gas production project in Wyoming since 2008. Currently, there are nine EISs for oil and gas production projects in Wyoming pending with BLM. Some of the EISs have been pending with BLM for more than 8 years. During the hearing, you said that “about half of those [project proposals] came in in the last two years.” Of these nine, you indicated that BLM would issue two to three final EISs in Wyoming this year.

- A. Would you please provide the date that each of the nine projects were first proposed to BLM?
- B. Would you please provide the date (month/year) when we can expect BLM to issue the final EIS for each of the nine projects?

**Question 3:** On April 17, 2015, the Secretary of the Interior issued an advanced notice of proposed rulemaking for the purpose of seeking public comment on potential updates to BLM rules governing oil and gas royalty rates, rental payments, lease sale minimum bids, civil penalty caps and financial assurances.

I am concerned that any proposal to raise royalty rates and other fees will put federal lands at an even greater competitive disadvantage with state and private lands—and, as a consequence, Wyoming and other public land states at a greater disadvantage with other areas of the country.

In 2011, DOI commissioned a study which found that higher royalty rates for federal lands in Wyoming “will deteriorate their competitive position in the market, which is rather weak as it is.”

On March 14, 2012, then BLM Director, Bob Abbey, testified before the Senate that there has been “a shift [in oil and gas production] to private lands in the East and to the South where there are fewer amounts of Federal mineral estate.”

**U.S. Senate Committee on Energy and Natural Resources  
April 30, 2015 Hearing: BLM Hydraulic Fracturing Rule  
Questions for the Record Submitted to the Honorable Neil Kornze**

According to the Energy Information Administration (EIA), federal onshore natural gas production has decreased by 22 percent since 2009. EIA has found that federal onshore natural gas production makes up a smaller percentage of total U.S. gas production than it has in at least 11 years. EIA has also found that federal onshore oil production makes up a smaller percentage of total U.S. oil production than it has in nine years. While these numbers reflect new production on state and private lands, they also show that federal lands are becoming less competitive with state and private lands.

Please explain, in detail, how raising the royalty rates on onshore oil and gas production on federal lands will not further reduce their competitive position relative to state and private lands. In your answer, please address the additional regulatory burdens, including those associated with the National Environmental Policy Act, which apply to oil and gas production on federal lands but not oil and gas production on state and private lands.

**Question 4:** I understand there are significant delays in obtaining sundry notices and rights-of-way (ROWs) for natural gas gathering lines on federal lands from BLM.

In February 2015, I asked Secretary Jewell to provide detailed information about pending requests for sundry notices and ROWs for natural gas gathering lines on federal land.

In response, the Secretary explained that BLM “lacks capability to query for details of each sundry notice” and BLM, with respect to requests for ROWs, “does not distinguish between requests for oil or gas, gathering or transport, lines.”

- A. What is the total number of requests for ROWs pending at BLM?
- B. What is the total number of requests for ROWs pending at each BLM Field Office?
- C. When were each of the pending requests for ROWs first submitted to BLM?

**Question 5:** Secretary Jewell has stated that BLM will propose a new rule for flaring and venting of natural gas on federal lands and Indian lands shortly.

Does BLM plan to conduct a federalism assessment on the impacts of the proposed rule to states pursuant to Executive Order 13132? If not, why not?

**Questions from Senator Lisa Murkowski**

**Question 1:** The Montana BLM office already oversees the North Dakota mineral activities, and Washington state and Oregon activities are managed out of the Portland office. E&E reported March 13, 2015 that there is speculation of a merger of the New Mexico and Arizona BLM offices. Is consolidation of the state offices part of a larger

**U.S. Senate Committee on Energy and Natural Resources  
April 30, 2015 Hearing: BLM Hydraulic Fracturing Rule  
Questions for the Record Submitted to the Honorable Neil Kornze**

policy vision for the future organizational structure of the BLM, and if so, what impacts and results does the BLM anticipate from such a shift?

**Question 2:** You stated during the hearing that significant consultations with States and Tribes occurred in the development of the rule. Did BLM consult with the State of Alaska, the Alaska Oil and Gas Conservation Commission, Alaska Native Village or Regional Corporations or tribal councils? Please list the entities in Alaska with whom the BLM consulted in the development of this rule.

**Questions from Senator Jeff Flake**

**Question 1:** On Friday, April 24, BLM Deputy Director Steve Ellis held a congressional briefing on a proposal to merge the Arizona and New Mexico state BLM offices. Can you provide an update on the status of that decision making process? That is, when does BLM plan to make a decision?

**Question 2:** If BLM decides to move forward with merging the offices, what sort of notice and consultation is the Bureau required to engage in with Congress before finalizing its decision?

**Question 3:** What type of outreach has the BLM conducted with interested stakeholders in Arizona and New Mexico?

**Question 4:** During the briefing, Deputy Secretary Ellis made frequent references to the joint offices in Oregon and Washington, as well as Montana and the Dakotas. Please provide information on the average length of time it takes those offices to process permits, environmental analyses, and other approvals before and after those officer mergers were completed.

**Question 5:** Please provide information on the cost savings that were realized from prior BLM office mergers (e.g., Oregon-Washington, Montana-Dakotas), and whether those cost savings were retained by those new regional offices or used elsewhere in the Bureau.

**Questions from Senator Mazie Hirono**

**Question 1: BLM MOU with FracFocus**

At the time that the Bureau of Land Management published the final rule on hydraulic fracturing on public lands the agency indicated that it was entering into a MOU with the managers of FracFocus to clear up concerns and recommendations by the Department of Energy's Science Advisory Board relating to functionality and accessibility of data.

**U.S. Senate Committee on Energy and Natural Resources  
April 30, 2015 Hearing: BLM Hydraulic Fracturing Rule  
Questions for the Record Submitted to the Honorable Neil Kornze**

Can you explain in more detail the specifics of the MOU? Does it address all recommendations and actions in the Department of Energy's FracFocus 2.0 report or only a portion of those?

**Question 2: Environmental Impacts of Fracking**

*The New Yorker* recently ran a lengthy piece that discussed the linkage between oil and gas development and the frequency of earthquake activity in Oklahoma. It noted that "Until 2008, Oklahoma experienced an average of one to two earthquakes of 3.0 magnitude or greater each year. In 2014, there were five hundred and eighty-five, nearly triple the rate of California. Including smaller earthquakes in the count, there were more than five thousand."

The article goes on to say, "Disposal wells trigger earthquakes when they are dug too deep, near or into basement rock, or when the wells impinge on a fault line." The research geologist from the United States Geological Survey that was interviewed for the article said, when discussing the linkage, "Scientifically, it's really quite clear." Do you agree with the USGS geologist that oil and gas exploration has contributed to increased seismic activity? Do you believe that additional steps should be taken to limit hydraulic fracturing or better regulate the placement of disposal wells, which house wastewater from hydraulic fracturing, in areas known to trigger earthquakes?

Dear Director Kornze:

Thank you for appearing before the Subcommittee on Energy and Mineral Resources oversight hearing on Wednesday, July 15, 2015 to present testimony on "*The Future of Hydraulic Fracturing on Federally Managed Lands.*"

Your testimony was extremely helpful in defining the Subcommittee's understanding of the issue and I appreciate the effort you took to prepare and present your testimony. While many questions were asked during the hearing, the Subcommittee has additional questions, attached, for your reply.

Please forward your responses to Matt Schafle, Clerk, with the Subcommittee on Energy and Mineral Resources, at [Matt.Schafle@mail.house.gov](mailto:Matt.Schafle@mail.house.gov) by no later than August 20, 2015. Your assistance in meeting this deadline is requested, as failure to meet it will be noted in the printed transcript.

Once again, thank you for your extensive effort in making this a valuable hearing.

Sincerely,

Doug Lamborn  
Chairman  
Subcommittee on Energy and Mineral Resources

**10:30 AM**

**Oversight hearing on:**

*"The Future of Hydraulic Fracturing on Federally Managed Lands"*

**Questions from Rep. Lamborn** for Neil Kornze, Director, U.S. Bureau of Land Management

1. In your written testimony, you state the implementation of the Hydraulic Fracturing ("HF") rule will be \$11,400 for each HF operation which you term "a modest cost." When developing this cost, did the bureau look at the many other costly inhibitors and costs including leasing and appraisal delays, APD fees, the lack of cadastral surveys? How are you going to provide operators with certainty that their Notice of Intent to hydraulically fracture a well will be reviewed on a timely basis, by employees trained in well completion, and under a scenario that respects the investments made by operators in well drilling?
2. Because of the added costs of federal approvals and processes, the GAO recently found that "... an oil or gas well that develops Indian resources generally costs almost 65 percent more for regulatory compliance than a similar well developing private resources." Do you think adding the final HF rule to this mountain of approvals, fees and permits will help or hurt Indian tribes who are interested in developing their energy resources and providing jobs for their tribal members?
3. The final HF rule would be applicable to operators on public as well as Indian lands. In developing, drafting and now finalizing the rule, did the bureau keep in mind the truly unique political and legal relationship the U.S. has with Indian tribes?

Does the U.S. trust responsibility to Indian tribes impose on the federal government additional obligations to ensure the value of their energy resources are maximized for benefit of tribal members?

4. Your statement suggests that one rationale for the HF rule is because it has not been updated and a lot has happened in the last 30 years. Indeed, a lot has happened in Indian Country in the last three decades and several Indian tribes repeatedly recommended to the bureau that tribal regulatory authority and decision-making be respected in the final rule. Why did the bureau ignore these recommendations?
5. You cite the growth of production on federal land as a testament to this Administration's commitment to onshore oil and gas development; how do you reconcile this commitment to onshore oil and gas with Lloyd Hetrick's testimony that this additional bureaucratic layer will further dissuade producers from federal land production?
6. You admitted that you had not prepared any instructional memoranda directing your state offices on how to implement the rule; as such, not a single variance was in place on June 23, and several offices were providing conflicting information concerning the rule's application. How is your agency taking steps to ensure uniform implementation of the rule throughout all state offices?
7. One of the associated costs with the hydraulic fracturing rule is an additional National Environmental Policy Act ("NEPA") analysis that will occur if an operator submits a standalone notice of intent to hydraulically fracture, separate from the Application for a Permit to Drill. Did the final rule analyze the cost of this additional NEPA analysis, and why or why not? Can NEPA analyses add substantial costs and delays to a project?

**Committee on Natural Resources**  
**Subcommittee on Energy and Mineral Resources**  
**1324 Longworth House Office Building**  
**Wednesday, July 15, 2015**

That sounds good. It will give our staff time to get refreshed on these bills.

Attached is Department testimony on S.796, in case

it's

helpful. I will work with our solids group to get something scheduled for August 24

or

25. If I find anything else that could be helpful

in the meantime,

I'll forward it on to you.

Oh recess...perfect time for a massive mine disaster!

My boss would like to introduce something fairly soon after getting back in September, so I'm hoping to get my ducks in a row pretty quickly. That said, I'm still just beginning to figure out what my questions might be for your folks, so there might be some value in waiting a bit.

Perhaps I'll just say this: I'm looking at the current Grijalva bill from this Congress, HR 963, and the Bingaman bill from the 111<sup>th</sup> Congress, S 796. If anyone at BLM has information or technical assistance about either of those texts that seems pressing, or would point towards **\*not\*** using those as the starting point for a bill, it would be great to have that info sooner rather than later. If no one is moved to share information urgently, let's plan for a call on the 24<sup>th</sup> or 25<sup>th</sup>, and I should have some more specific questions by then.

Thanks for your help—I'm going to make sure to schedule all future disasters for June, when everyone is in town.

---

**Subject:** Re: Hardrock mining cleanup

Hi Maya,

I'm actually on leave starting Thursday (8/13) for ten days. Can the call take place the week of August 23? If you prefer to have the call this week we'll check with the solids group to see if they are available Thursday or Friday, and someone else from our office will cover it.

Let me know what works best for you.

Safe travels back to D.C.

Meagan

Hi Maya!

Jeremy Bratt passed your request along. I spoke with the Chief of our Solid Minerals Division, Mitch Leverett, and he is available to chat with you tomorrow at 3:30pm. Does that work for you?

Let me know and I can set something up.

Thanks!

Meagan

**Subject:** Hardrock mining cleanup

Hi Stephenne,

In light of the mine waste disaster, my boss is interested in introducing legislation on hardrock mining cleanup, along the lines of the 1872 Mining Law reform that's been floating around for years.

I'm traveling for the next few weeks, but would it be possible to chat in the next few days with some of your mining folks about this? We're likely to start from the Grijalva bill HR 963, but would be interested in any input or technical assistance your folks might have.

Thanks!

Maya

# Executive Summary

## Executive Summary

The Bureau of Land Management (BLM) serves as the steward of vast tracts of western and Alaskan lands with a multiple use and sustained yield mission to maintain the health, diversity and productivity of public lands for present and future generations. Public demands placed on these lands continue to change and grow, as does the complexity of land management decisions and their implications for the future.

The *Federal Land Policy and Management Act of 1976 (FLPMA)* defined the concept of managing public lands on the basis of multiple use and sustained yield, and it is this unique mandate that is the BLM's greatest strength. This approach emphasizes how people and the lands are interconnected and interdependent, and balances the diversity of interests and values associated with the public lands. Doing so on a landscape basis further enhances the ability to meet the diverse needs of our public land users in a balanced and sustainable way.

The 2016 budget request for the BLM strikes this balance in a year that presents history-making opportunities for managing public lands. The Bureau must invest in conservation of America's sage-steppe ecosystem, which spans over a little more than 65 million acres. Conserving this iconic landscape, the sagebrush habitat, and the over 350 species that call it home, would not only save one of America's great treasures, it will protect our ability to sustainably manage these lands for future generations, including traditional and renewable energy development, recreation, livestock grazing, wild horses and burros, and wildfire. All of these have far-reaching consequences for the Nation's economy.

Accordingly, it is vital that the Bureau have the resources necessary to manage both safely and effectively the 100,000 oil and gas production wells that we are responsible for overseeing. However, funding for the BLM's onshore oil and gas program has not kept pace with its workload, thus presenting difficult choices for the BLM. To help bolster BLM's capacity to effectively respond to industry demand and manage the increasing workload in its Oil and Gas Management program, the 2016 budget includes important funding increases aimed at leasing, permitting, and management efficiencies through technology. The budget proposes to institute a fee system for its inspection program, similar to the one already in place for Federal offshore oil and gas leases. The new fee revenue, estimated at \$48 million in 2016, will allow for a net increase of \$6.9 million in program capacity for this critical management responsibility. The fee proposal will allow the BLM to be nimble in responding to industry demands while reducing the need for direct appropriations by \$41.1 million, funds that can be directed toward other priority activities within the oil and gas program and elsewhere in BLM.

This budget seeks a significant increase in funding for one of the greatest gifts we can give future generations, one that transcends Administrations and will span generations – our National Conservation Lands. Through legislative action and Presidential initiative, special designations for these lands protect significant resource values while providing opportunities for recreation and making significant contributions to the US economy. The proposed investments will help to ensure that these legacy lands are managed for the enjoyment of all Americans and preserved in perpetuity.

The budget request also includes a legislative proposal to help link individual Americans to their public lands through the formation of the BLM Foundation, which would raise private funds and foster productive partnerships to promote the BLM's multiple use and sustained yield mission. Such a foundation would allow individuals to demonstrate their commitment to public lands with

their time and money. The BLM is the Nation's only large land management agency without a congressionally chartered foundation to support its work.

### Bureau Overview

More than 10,000 employees manage an outsized portfolio of lands and resources that encompasses more than 247 million surface acres, primarily in 11 western States, including Alaska, and 700 million acres of Federal mineral estate, as well as the mineral operations and cadastral surveys on 56 million acres of Indian trust lands. In other words, the BLM is entrusted with 13 percent of the Nation's surface land and roughly one third of its minerals resources. While often thought of as a Western agency, the BLM also has significant management responsibilities east of the Mississippi River.

The public lands serve several important functions. As population growth in the West has expanded since World War II, the BLM has faced a corresponding rise in public demand for uses such as recreation, wildlife, and open space. At the same time, BLM lands have provided energy and minerals, forage, forest products, and other goods to a growing Nation. Today, these lands not only continue producing natural gas, oil and coal, but are also driving the Nation's new energy economy by producing solar, wind and geothermal energy to reduce our dependence on fossil fuels.

BLM-managed lands also provide critical open-space for an expanding population in western cities and towns. The BLM is also a steward of the Nation's public lands - helping to protect threatened or endangered species, restore valuable habitat, manage forest and rangeland fires, preserve historical and paleontological resources, and administer a range of resources that benefit a growing economy. In these ways, BLM management contributes to the vitality of local economies, and delivers benefits to all Americans.

As with all great responsibilities, effective public land management also entails considerable challenges that the BLM addresses through cooperation and creativity. Collaboration is the hallmark of the BLM's management approach, engaging a wide range of stakeholders and communities in all its land management decisions.

### 2016 Budget Request

\$18.3 million above the 2015 enacted level.

The 2016 BLM budget request for current appropriations is \$1.2 billion, an increase of \$107.6 million above the 2015 enacted level. The budget proposes \$1.1 billion for the Management of Lands and Resources appropriation and \$107.7 million for the Oregon and California Grant Lands appropriation, BLM's two operating accounts. The request for these two accounts represents a total increase of \$91.4 million above the 2015 enacted level. The budget also proposes \$38.0 million in discretionary funding for Land Acquisition, an increase of

The BLM budget request translates to a cost per acre of about \$5.04 to American taxpayers.<sup>1</sup> Recent Interior studies indicate that BLM's management of the public lands provides an outstanding economic return to the American people. In 2013,<sup>2</sup> activities on BLM managed lands were estimated to contribute \$107 billion to the Nation's economic output and supported over 446,223 domestic jobs through extractive and non-extractive uses of public lands.<sup>3</sup>

This request provides sustainable benefits across the West and for the Nation as a whole. It maintains working landscapes for grazing, timber and recreation; it strengthens oversight of onshore oil and gas development while providing increased opportunities for developing these economic resources; and it protects unique wildlife habitat and ecosystem functions that are also essential sources for clean water, clean air, carbon sequestration, nutrient cycling and cultural preservation.

**Powering Our Future** – The Bureau plays an essential role in meeting the Administration's "All-of-the-Above" energy strategy. BLM's oil and gas program accounts for 11 percent of the natural gas and five percent of the oil that is domestically produced. In addition, coal from public lands provides approximately 22 percent of U.S. electrical production annually. Since 2009, the BLM has approved 52 renewable energy projects, including 29 utility-scale solar facilities, 11 wind farms, and 12 geothermal plants, with associated transmission corridors and infrastructure to connect with established power grids. If fully constructed, these projects will provide more than 14,000 megawatts of power, or enough electricity to power about 4.8 million homes, and provide over 20,000 construction and operations jobs.

The 2016 budget continues strong support for the Administration's energy goals and strengthens management of onshore oil and gas development. This budget request proposes an increase of \$12.8 million above 2015 enacted levels to develop master leasing plans, support the work of the pilot project offices, and advance the technologies needed to improve management of the program.

Since 2000, the BLM has permitted nearly 47,000 new wells; however, the agency's role does not end when a well goes into production. The BLM has oversight responsibility for each of the approximately 100,000 wells on public land from cradle to grave. This is a significant responsibility and one that the BLM takes seriously to protect the public, the environment and taxpayer interests. The 2016 budget request includes a proposal to charge an inspection fee to cover the costs of performing those functions for industry. The BLM estimates that the fee schedule included in the budget will generate \$48.0 million in offsetting collections for the inspection and oversight program, allowing for a \$6.9 million increase in program capacity compared to the 2015 enacted level. This new fee authority will also bring onshore oil and gas inspections and oversight into congruence with offshore oil and gas management, where inspection and related activities are presently funded through operator fees.

<sup>1</sup> *Public Land Statistics, 2013* ([http://www.blm.gov/public\\_land\\_statistics/pls13/pls2013-web.pdf](http://www.blm.gov/public_land_statistics/pls13/pls2013-web.pdf))

<sup>2</sup> The most recent year for which figures are available.

<sup>3</sup> Department of the Interior Economic Impact Report, 2013 (page 17)

Permanent funds provided in the 2015 National Defense Authorization Act and additional current appropriations requested in the 2016 budget will enhance the BLM's ability to process APDs more quickly and efficiently despite the increased complexity and technical challenges involved in today's oil and gas operations. The NDAA provides for a 10-year authorization of APD processing fees, adjusted each year for inflation, which will replace the fee currently provided through annual appropriations language. The NDAA sets the fee at \$9,500 in 2016, an increase of \$3,000 over the 2015 APD fee of \$6,500. This will generate an estimated \$47.5 million in APD fee revenues, \$15.0 million more than the \$32.5 million provided for in the 2015 appropriations bill. However, of this amount, only 85 percent or \$40.4 million is available for BLM use to expand its APD processing capacity (for each year from 2016 to 2019). The budget requests that Congress appropriate the remaining \$7.1 million in estimated APD fee revenues as part of the annual Interior appropriations bill. In addition, the 2016 BLM budget request includes an additional \$3.0 million in discretionary funds to enhance the capacity of BLM's permit processing project offices. The NDAA also permanently extends BLM access to the mandatory pilot office funding authorized under section 365 of the Energy Policy Act of 2005. In the absence of the NDAA provision, BLM's authority to use the lease rental revenues deposited into the Permit Processing Improvement Fund would have expired at the end of 2015.

The BLM budget request maintains funding for Renewable Energy at essentially the 2015 enacted level, providing the BLM with the necessary resources to continue to aggressively facilitate and support solar, wind, and geothermal energy development.

While this request addresses greater use of renewable energy sources and the responsible development of onshore oil and gas to meet U.S. energy needs, coal provides for the preponderance of near-term electrical generation for the Nation. Coal produced from Federal lands is the source of over 20 percent of all U.S. electricity. An increase of \$1.1 million in both the Coal Management program and the Other Minerals program will support the automation and tracking of licenses, leases and permitting as well as inspection activities, including production verification associated with coal and other minerals.

The BLM role in meeting the Nation's energy requirements goes beyond the production side of the equation. Across the vast public lands of the West, the BLM, through rights-of-way issuance, facilitates the efficient delivery of energy to meet growing demand and address the West's aging electrical infrastructure, which impedes efficient energy transmission and inhibits renewable energy development. To support necessary upgrades for reliability and increased capacity, the budget includes a \$5.0 million increase in the Cadastral, Lands and Realty Management program to identify and designate energy corridors for the siting of transmission lines and other related infrastructure in an environmentally sensitive manner. This increase complements the Secretary's Powering Our Future initiative.

**Sage-Grouse Conservation** – Greater sage-grouse once occupied more than 290 million acres of sagebrush in the West. Unfortunately, the bird, known for its flamboyant mating ritual, has lost much of its habitat over the last century. Large amounts of the habitat that remain have become fragmented or degraded. The species currently resides in eleven States and two Canadian provinces. In a March 2010 decision, the U.S. Fish and Wildlife Service (FWS) determined that listing Greater sage-grouse under the Endangered Species Act (ESA) was “warranted, but precluded.” The FWS stated that the BLM was not “fully implementing the regulatory mechanisms available” to ensure the species' conservation. To address those concerns, the BLM initiated a formal land use planning process in 2011.

Since 2013, the BLM has targeted \$15.0 million per year toward implementation of broad-scale sage-grouse planning and conservation activities, including amendment or revision of 98 land use plans to designate priority habitat, perform habitat restoration and improvement, and map, assess and monitor that habitat. To avoid the need to list the sage-grouse under the ESA, the BLM is creating and implementing a strategy to stabilize the population. These efforts have involved unprecedented collaboration between the BLM, western State governments, and non-governmental partners.

Success in conserving the sage-grouse will demonstrate the value of planning for conservation and development at a landscape level. It will also help demonstrate that working at this level – across lands administered by State and Federal agencies – successful measures can be developed and implemented to effectively recover a species that was previously headed on the road to extinction through landscape-level planning, interagency collaboration, and public-private partnerships.

Success in avoiding the need to list the Greater sage-grouse will also bring economic benefits in regions where the largest concentrations remain: the Rocky Mountain region, where development pressure is greatest; and the Great Basin, where the primary threats are increasing due to a changing climate, drought, invasive species and increased risk of more devastating wildfires.

The 2016 budget request includes an additional \$45.0 million to expand BLM wildlife conservation efforts, including restoration and protection of the sage-grouse habitat. With this request, BLM's resources dedicated to sage-grouse conservation will total \$60.0 million and are an investment in preserving Western values and economies. This effort to restore and protect the sagebrush is vital. Sagebrush areas support the sage-grouse and over 350 other species, including mule deer and pronghorn, are integral to local economies for hunting, biking, and other recreational activities, and are the site of much of our most prolific energy development. The \$60 million request builds on the investment in resource planning and involves the local community in an effort to take a meaningful step forward to minimize the threat of wildfire, control invasive plants and removing unwanted trees and restoring and protecting habitat, as well as monitoring and assessing conditions of the sagebrush habitat.

The BLM will also implement new methods to measure and track the effectiveness of its conservation efforts, and set as a goal providing a net conservation gain for the species. The BLM will create measurable objectives for habitat management, use common criteria that can be shared with partner agencies, and use unbiased measures to assess and publicly report on the outcomes of mitigation. In the Great Basin alone, there are 17 million acres of sage-grouse habitat at risk of loss due to drought, wildfire, and invasive grasses. The BLM manages about 13 million of those acres. The BLM's ability to assess and monitor the results across these large landscapes is crucial to a successful effort and consistent with a commitment to use adaptive management as a means of ensuring that investments in sage grouse conservation are effective and efficient. The importance of having accurate ongoing data and information extends to the Rocky Mountain region as well.

**Cooperative Landscape Conservation** – Understanding and responding to the impacts of a changing climate is an Administration priority, one in which the Bureau plays a critical role as both the Nation’s largest land manager and a partner with States, Tribes, local governments, and private stakeholders. Among the most significant challenges of the changing climate is a projected increase in the frequency and intensity of extreme weather events – including severe storms, wildfire and drought. In 2016, the Department proposes investments to increase the resilience of both coastal and inland communities to impacts of these events. These investments will focus on areas at high risk to climate challenges to address vulnerabilities to extreme events in these geographies in partnership with State, local, and tribal governments and other stakeholders. Given this challenge, the 2016 budget includes a total of \$25.0 million for Cooperative Landscape Conservation. This reflects an increase of \$10.0 million in BLM’s Challenge Cost Share program for leveraged partnership projects to address community resiliency. The Challenge Cost Share program is a 50:50 non-Federal partner matching program which supports mutually beneficial public and partner projects. The funding would support work with non-Federal partners on projects that increase the resilience of landscapes to extreme weather events with a focus on the inland challenges of wildfire, flooding and drought.

Projects funded through the Challenge Cost Share programs will improve community resilience at the project site and provide new and needed data to communities around the Nation on what natural infrastructure designs and solutions contribute to resilience.

To accomplish this effectively, the Department will draw on scientific expertise to identify ecosystem restoration and enhancement strategies likely to successfully build resilience to fire, flooding and drought. Efforts might also identify focal areas where these strategies are likely to have a significant return on investment by protecting communities and at risk infrastructure as well as improving landscape resilience in areas of strategic importance to the Department. As part of this initiative the Department will develop project criteria and evaluation metrics relevant to these new project types. Modeled on the Department’s approach to implementing Hurricane Sandy resilience investments, the Department would request proposals and conduct a coordinated evaluation of projects.

Climate change is already altering the structure and functions of ecosystems, changing the distribution and abundance of plants and animals, and in many cases limiting the ability of lands and waters to provide services to communities. As average temperatures rise, droughts are increasing, wildfire is more frequent and catastrophic, snowpack is declining, water supplies are diminishing in key areas of the West, and Arctic permafrost is thawing in Alaska, creating challenges, as well as opportunities, on the national landscape. Landscapes are large, connected geographical regions that have similar environmental characteristics, such as the Sonoran Desert or the Colorado Plateau. Because these landscapes and the issues affecting them are not bound by political or jurisdictional boundaries, the BLM is moving towards implementation of a landscape-scale management approach to better understand these challenges and support balanced stewardship of the diverse natural resources of the public lands.

To achieve this goal, BLM is undertaking two connected initiatives: Rapid Ecoregional Assessments (REAs) and a landscape approach for managing public lands. The purpose of these initiatives is to help BLM managers and land stakeholders, both public and private, understand environmental conditions and trends from a broader landscape perspective, and to use this information to inform, focus, and coordinate management efforts on-the-ground.

Since 2010, the BLM has launched 15 REAs to improve the understanding of the existing condition of these landscapes and anticipate how they might change. The REAs provide a science-based information platform for formulating coordinated, multi-agency strategies that can respond effectively to climate change, wildfire, and other environmental challenges that transcend local administrative boundaries.

In 2016, the BLM will finalize the Planning 2.0 initiative, which focuses on designing a more proactive and flexible approach to planning across landscapes. The planning process uses more up-front collaboration with partners to produce durable decisions that can also readily address the rapidly changing environment and conditions posed by climate change, urban growth near public lands and expanding resource development, and other stressors.

Informed decision making and adaptive management require current data about the status and trend of terrestrial and aquatic systems and about the location and extent of natural and human-caused disturbances. The BLM's Assessment, Inventory, and Monitoring (AIM) Strategy is the framework for this data collection. The 2016 budget request includes an increase of \$5.0 million to facilitate and expand implementation of the AIM strategy, which is central to meeting commitments outlined in the Greater Sage-grouse land use plans, Secretary Jewell's landscape mitigation strategy and other initiatives.

The budget request also includes a \$7.8 million increase in Resource Management Planning, Assessment, & Monitoring to support implementation of the BLM's geospatial strategy. The BLM's Enterprise Geospatial Information System (EGIS) aggregates data and viewing information across boundaries to capture ecological conditions and trends; natural and human influences; and opportunities for resource conservation, restoration, development, and partnering. The BLM geospatial proposal is integrated within Interior's growing enterprise GIS capabilities and serves as a critical component of the Department's corporate geospatial strategy.

Today the BLM has an unprecedented opportunity – using science and technology to create a better understanding of landscapes – to advance important conservation goals and appropriately develop resources. The President's Budget continues to promote research and development, scientific investments, and monitoring to best manage the country's natural resources and heritage. Continued and enhanced coordination of science activities across bureaus will be required to achieve the Department's important mission objectives. The 2016 Budget facilitates this need by better supporting integrated efforts to achieve resource management outcomes. The *BLM* has identified several key areas for investment where coordination with other Department bureaus will leverage results to more effectively achieve mission outcomes.

The BLM has been the lead for the United States for the period of 2013-2017 on the Arctic Council's Conservation of Flora and Fauna Working Group (CAFF) Circumpolar Biodiversity Monitoring Program (CBMP), which coordinates living resource monitoring among an international network of scientists, government agencies, Indigenous organizations and conservation. For fiscal year 2016, the Terrestrial, Marine, and Freshwater monitoring plans are underway, and the U.S. and Canada are leading the newly established coastal monitoring plan. <http://www.caff.is/about-the-cbmp>

During fiscal year 2016, BLM will continue to support the North Slope Science Initiative (NSSI), an intergovernmental effort to increase collaboration at the local, State, and Federal levels to address research, inventory, and monitoring on the North Slope of Alaska. BLM will pursue

scenario planning for energy and resource extraction development on the North Slope of Alaska and in the offshore environments of the Chukchi and Beaufort Seas in coordination with the Bureau of Ocean Energy Management, the State of Alaska, the North Slope Borough, and other local, regional, and national stakeholders. The project will help decision makers prioritize monitoring and research needed to address emerging issues regarding: weather and climate, increasing marine activity, permafrost, coastal and riverine erosion, hydrology and lake drying, coastal salinization, contaminants, fire regime, and vegetation changes. <http://northslope.org/>

In 2016, the BLM's Wild Horse and Burro (WHB) Program will continue its efforts to find innovative solutions to wild horse and burro management challenges through implementation of a Prize Challenge. With the assistance of InnoCentive, a global leader in crowdsourcing innovation problems, BLM will fundraise and launch Prize Challenge in FY15.

**America's Great Outdoors** – With more than 64 million people living within 100 miles of BLM-managed lands in the West, the BLM, through America's Great Outdoors and other initiatives, is vital to connecting Americans to outdoor opportunities that help preserve the social fabric of the Nation, bond families across generations, and preserve the character of the rural American West. In 2013, 61 million recreational visits to public lands and waters generated over \$5.5 billion in economic outputs, and supported over 42,000 jobs<sup>4</sup>. However, financial investment in the Recreation and Visitor Services program has not kept pace with the growing recreation-related demands on BLM lands. In 2016, the BLM would use additional funding of \$6.6 million to implement its National Recreation Strategy - Connecting with Communities. This strategy aligns the resources of the BLM's Recreation & Visitor Services Program with the desired benefits sought by local communities.

The 2016 President's Budget Request for the BLM includes an \$11.2 million increase for the National Conservation Lands, which celebrate their 15<sup>th</sup> anniversary in 2016, to address high priority needs in national monuments and national conservation areas, including developing management plans for recently designated units, and developing and implementing travel management plans for high-use units.

A strong commitment to conservation on the public lands also means proactive management of the cultural and paleontological resources that reside there. America's cultural resources embody a rich heritage of human experiences, architectural achievements, and cultural identities. The BLM manages the largest, most diverse and scientifically important collection of heritage resources in North America. Through the Cultural Resources Program, a proposed \$2.0 million increase will enhance the BLM's capacity to preserve and protect these vast heritage resources, moving from a compliance-driven support program to one that is more capable of addressing large-scale, cross-jurisdictional projects. Currently, only 10 percent of BLM lands have completed cultural resource inventories.

<sup>4</sup> Department of the Interior Economic Impact Report, 2013 (page 17)

The BLM also has an excellent opportunity to meet the Secretary's ambitious initiative to connect America's young people to the great outdoors. With adequate resources, the BLM can meet the Secretary's goals. The 2016 Budget request includes an increase of \$5.0 million for the BLM's youth programs and partnerships, including a \$2.5 million increase in the Soil, Water and Air program and \$2.5 million in the Recreation Management program over the 2015 enacted level. These resources will enable the BLM to accomplish high priority projects and promote quality participant experiences and pathways to careers.

The 2016 budget also includes increases for programs funded through the Land and Water Conservation Fund, a vital component of the America's Great Outdoors initiative. The 2016 budget proposal includes a total of \$93.4 million for BLM Federal land acquisition, including \$38.0 million in requested discretionary appropriations and \$55.4 million in mandatory funding.

**Other Key Program Changes** – A \$2.9 million increase in the Wild Horse and Burro program will allow the BLM to aggressively implement recommendations in the June 2013, National Academy of Sciences report "Using Science to Improve the BLM Wild Horse and Burro Program – A Way Forward", including expanding ongoing research on population control methods. Curbing reproduction of wild horses on the range is critical to controlling the costs of this program.

The budget includes program reductions totaling \$6.9 million in the Oregon and California Grant Lands account from FY 2015. A reduction of \$3.8 million in the Western Oregon Other Forest Resources program will be achieved by reducing a range of activities, including inventory and monitoring, rangeland health assessments and restoration projects, and activities in support of recreation. A \$3.2 million decrease in the Western Oregon Resource Management Planning program reflects lower funding needs as the program moves to completing the six revised resource management plans.

**Offsetting Collections for Grazing**

– The BLM proposes to begin a pilot project for accelerating grazing permit renewal through proposed grazing administration fees. A fee of \$2.50 per animal unit month is estimated to generate \$16.5 million in fee collections in 2016, more than offsetting a decrease of \$3.0 million in the request for appropriations, thereby enhancing the BLM's capacity for processing grazing permits. The increase will allow the BLM to make more progress in addressing the grazing permit backlog, which totaled approximately 5,600 of the nearly 17,800 permits for fiscal year 2014.

The tables below summarize the BLM's 2016 Budget Request and available mandatory appropriations by major appropriation account:

Current Appropriations (in \$000)	2014 Actual	2015 Enacted	2016 President's Budget	
			vs. 2015	Requested

◊ 2015 amount includes 7.3% sequester pursuant to Section 254 of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended  
 ▽ - Exempt from Sequestration in 2014 & 2015

^ 2014 amount includes 7.2% sequester of payments to States and Counties pursuant to Section 254 of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended, except for Secure Rural Schools and Community Self-Determination Act payments authorized to be made in 2014 (for 2013) to Oregon & California Grant Lands and Coos Bay Wagon Road counties under Public Law 113-40

^ 2015 amount includes 7.3% sequester of payments to States and Counties pursuant to Section 254 of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended.

Note: The Helium Stewardship Act of 2013 does not authorize further appropriations to the Abandoned Well Remediation Fund until Fiscal Year 2019

Note: Does not include the BLM Working Capital Fund, nor the offsetting collections of that fund

## Legislative Proposals

**National BLM Foundation** – The BLM proposes to establish a congressionally chartered foundation to help link individual Americans to their public lands. The BLM Foundation would raise private funds to promote the BLM's multiple use and sustained yield mission and foster productive partnerships. A foundation would provide the Bureau with significant new tools to expand its partnerships and allow the public to support critical programs and activities for which they have a passion, whether that is the Wild Horse and Burro Program, the National Conservation Lands, habitat restoration, or others. Established as a charitable, nonprofit organization, the foundation would benefit the public by protecting and restoring natural, cultural, historic, and recreational resources for future generations. The BLM is unique in that it is the Nation's only large land management agency without a congressionally chartered foundation to support its work.

As resource issues broaden and diversify across larger landscapes and include a wider set of constituents, the BLM believes this approach will help reach these broader communities and enhance our efforts to better engage with the public. Establishing the foundation would broaden the BLM's partnership capabilities to a national scale.

**Oil and Gas Management Reforms** – The Administration proposes a package of legislative reforms to bolster and backstop administrative actions being taken to reform the management of Interior's onshore and offshore oil and gas programs, with a key focus on improving the return to

taxpayers from the sale of these Federal resources and on improving transparency and oversight. Proposed statutory and administrative changes fall into three general categories: advancing royalty reforms, encouraging diligent development of oil and gas leases, and improving revenue collection processes.

Royalty reforms include evaluating minimum royalty rates for oil, gas, and similar products; adjusting onshore royalty rates; analyzing a price-based tiered royalty rate; and repealing legislatively mandated royalty relief. Diligent development requirements include shorter primary lease terms, stricter enforcement of lease terms, and monetary incentives to get leases into production, for example, through a new per-acre fee on nonproducing leases. Revenue collection improvements include simplification of the royalty valuation process, elimination of interest accruals on company overpayments of royalties, and permanent repeal of Interior's authority to accept in-kind royalty payments. Collectively, these reforms will generate roughly \$2.5 billion in revenue to the Treasury over ten years, of which an estimated \$1.7 billion will result from statutory changes.

**Hardrock Mining Reform** – The 2016 budget includes two legislative proposals to reform hardrock mining on public and private lands by addressing abandoned mine land hazards and providing a better return to the taxpayer from hardrock production on Federal lands.

The first component of this reform addresses abandoned hardrock mines across the Nation through a new Abandoned Mine Lands (AML) fee on hardrock production. Just as the coal industry is responsible for remediating abandoned coal sites, the Administration proposes holding the hardrock mining industry responsible for the remediation of abandoned hardrock mines. The legislative proposal will levy an AML fee on uranium and metallic mines on both public and private lands. The proposed AML fee on the production of hardrock minerals will be assessed on the volume of material displaced after January 1, 2016. The receipts will be split between Federal and non-Federal lands. The Secretary will disperse the share of non-Federal funds to each State and Tribe based on need. Each State and Tribe will select its own priority projects using established national criteria. The proposed hardrock AML fee and reclamation program will operate in parallel with the coal AML reclamation program as part of a larger effort to ensure the Nation's most dangerous abandoned coal and hardrock AML sites are addressed by the industries that created the problems.

The second legislative proposal institutes a leasing process under the Mineral Leasing Act of 1920 for certain minerals - gold, silver, lead, zinc, copper, uranium, and molybdenum - currently covered by the General Mining Law of 1872. After enactment, mining for these metals on Federal lands will be governed by the new leasing process and subject to annual rental payments and a royalty of not less than five percent of gross proceeds. Half of the receipts will be distributed to States in which the leases are located and the remaining half will be deposited in the Treasury. Existing mining claims will be exempt from the change to a leasing system. The proposal also increases the annual maintenance fees under the General Mining Law of 1872 and eliminates the fee exemption for miners holding 10 or fewer mining claims. These changes will discourage speculators from holding claims that they do not intend to develop. Holders of existing mining claims for these minerals could voluntarily convert their claims to leases. The Office of Natural Resources Revenue will collect, account for, and disburse the hardrock royalty receipts.

**Reauthorize the Federal Land Transaction Facilitation Act (FLTFA)** – The 2016 budget proposes to reauthorize FLTFA, which expired in July 2011, and allow lands identified as suitable for disposal in recent land use plans to be sold using the FLTFA authority. The FLTFA

sales revenues would continue to fund the acquisition of environmentally sensitive lands and to cover the administrative costs associated with conducting sales.

**Land and Water Conservation Fund** -- The Department of the Interior will submit a legislative proposal to authorize permanent annual funding, without further appropriation or fiscal year limitation, for the Land and Water Conservation Fund (LWCF). In 2016, the proposal includes \$38.0 million in discretionary funding and \$55.4 million in mandatory funding for the BLM's land acquisition program.

### **Health Benefits for Seasonal Employees**

On July 29, 2014, OPM issued a proposed rule that would expand eligibility for enrollment under the Federal employee health benefits (FEHB) program to certain temporary, seasonal and intermittent employees. This regulation would make FEHB coverage available to these newly eligible employees no later than January 2015. The Department developed a model to estimate the number of employees who would accept the new coverage and the estimated cost to the government. The Management of Lands and Resources account includes \$2.3 million for the 2016 program and fixed cost changes associated with the estimated cost for new coverage under FEHB.

### **Expand Analytical Capabilities of the Secretary's Indian Water Rights Office**

This Administration has put a high priority on settling Indian water rights claims as part of its trust relationship with tribes, and anticipates dozens of water rights negotiation in the coming years. The Department recommends instituting policies and strategies that ensure an analytically robust, methodical, and cost-effective approach to negotiating Indian water settlements that result in optimal infrastructure and water delivery results for stakeholders, appropriate roles for financial contributors, and which strengthen climate resilience, promote sound watershed management, and advance water security in Indian country. The new approach will better coordinate expertise of the Department, Indian tribes, States, and other stakeholders to reach Indian water settlements more effectively and expediently. In this budget, the BLM supports the expanded duties and responsibilities of the Secretary's Indian Water Rights Office through payments made to the Working Capital Fund.

### **Supporting the President's Management Agenda**

The President's Management Agenda seeks to improve the way that government works and delivers for citizens. The Bureau of Land Management has been particularly focused on delivering world-class customer services to citizens by making it faster and easier for individuals and businesses to complete transactions and have a positive experience with government, including through the use of electronic permitting ("e-permitting").

Within the Oil & Gas Management program, the BLM is redesigning the Automated Fluid Minerals Support System (AFMSS) to improve the oil and gas permitting process. The first module under development will automate all of the internal and external processes for submitting and processing Notices of Staking (NOS) and Applications for Permit to Drill (APD) for federal and Indian oil and gas resources. This module will automate the process from the time the operator submits the NOS or APD, through the required BLM reviews, to its approval/denial decision. The system will provide enhanced reporting capabilities that will allow the BLM to track the NOS/APD through the process, identify bottlenecks, and provide increased transparency and accountability.

The new APD module will enhance the current capabilities of the Well Information System (WIS) and the functionality of the current AFMSS system by automating workflows and having all data in electronic format. This module is the first of many that will include processing of Sundry Notices, additional reporting, and automation of inspections using mobile applications on tablets.

With respect to APDs, the goal of e-permitting is to continue to reduce the time spent with the operators fine-tuning and completing the field data required for proper surface and downhole technical analysis. The BLM continues to experience challenges in the permit approval process, and the level of analysis has grown to match the complex and sophisticated horizontal well completions that BLM increasingly deals with. The BLM anticipates an improvement in processing time and overall greater program efficiency as a result of instituting an e-permitting system.

The Bureau also continues to pursue shared services and common infrastructure, facilitate agency collaboration and co-funding, and implement innovative approaches to resource management. The BLM's IT Transformation initiative will continue to achieve savings through labor reductions, consolidation of infrastructure staff, servers and data center closures, contract consolidations and the promotion of mobility which will allow us to reduce our overall footprint. Additionally, all IT contracts are being reevaluated through the IT Spend Plan process, resulting in the consolidation of contracts, maximization of bulk purchases to achieve additional savings and standardization. The BLM will continue its commitment to ensuring that information technology efforts align with Departmental initiatives focused on consolidation, shared services, and improving IT cost efficiency. The Bureau will continue to seek further centralization efforts internally, while expanding consolidation efforts by working with other Bureaus to share services in areas the of Data Center Consolidation, Geospatial, IT Acquisitions, and Application Consolidation to achieve greater cost efficiency.

# Summary of Program and Legislative Changes

## SUMMARY OF PROGRAM AND LEGISLATIVE CHANGES

The following describes the major increases, decreases, transfers, legislative and administrative changes and management efficiencies in the BLM's 2016 budget.

### Fixed Costs

**Fixed Costs Increases (+\$13,312,000/+0 FTE)** – Requested fixed cost increases include costs such as planned pay increases, space rental costs, retirement system costs, health plan costs, workers compensation costs, unemployment compensation costs, and specified Department of the Interior costs funded through the Department's Working Capital Fund.

### America's Great Outdoors

**Recreation Resources Management: National Recreation Strategy (+\$6,615,000/+5 FTE)** – The requested increase will allow the BLM to implement its National Recreation Strategy, which aligns the resources of the BLM's Recreation & Visitor Services Program with the desired outcomes of local communities, businesses, and other service providers to increase delivery of benefits to the recreating public and refines program objectives to achieve recreation-tourism outcomes that communities value most, while capitalizing on the inherent advantages of the BLM's unique recreation brand. In 2016, the program will address safety needs, provide better signage and interpretive exhibits, improve accessibility standards at 26 BLM Visitor Centers, and implement the Mountain Bike Action Plan with national partners. Funding will also be used for an interactive national level map; a site specific webpage design that features recreation information; and static, printable PDF maps showing recreation facilities and amenities.

**National Conservation Lands (+\$11,181,000/+20 FTE)** – The 2016 budget request includes an increase of \$11.2 million to support critical resource protection and maintenance work on the National Conservation Lands. Efforts to be undertaken will include eradicating invasive plants that jeopardize native species and contribute to unnatural, increasingly difficult-to-manage fire regimes; protecting equipment investments from weather; conducting inventories of the world-class and often endemic resources, objects, and values for which each NM&NCA was designated; and implementing resource, science and travel management plans. The BLM will also address additional maintenance needs, accommodate public demand for increased hours of operation, program offerings and greater capacity on National Conservation Lands, and support critical staff positions.

**Cultural Resources: Safeguarding Our Irreplaceable Heritage (+\$2,000,000/0 FTE)** – The 2016 budget request includes a program increase of \$2.0 million to enhance the BLM's capacity to manage unique, irreplaceable heritage resources. The program will conduct up to 60 additional localized on-the-ground inventories of sensitive areas, and site protection and stabilization projects for priority sites vulnerable to the effects of climate change (e.g. fire, erosion, water levels) and unauthorized activities. Projects will also focus on updating regional overviews and further implementing predictive modeling and data analysis to plan across broad landscapes and enhance the bureau's ability to address large-scale, cross-jurisdictional land-use.

## Land Acquisition – America’s Great Outdoors

**Landscape Acquisition Projects: High Priority Projects (+\$18,158,000 / 0 FTE)** - In 2016, the BLM will acquire high priority acquisition projects in the core and collaborative landscape planning land acquisition programs. The 2016 core program is \$10.4 million and will fund nine of BLM’s highest priorities. The collaborative landscape-planning component builds on efforts begun in 2011 to invest strategically in interagency landscape-scale conservation projects while continuing to meet bureau-specific programmatic needs. The Department of the Interior and the U.S. Forest Service (USFS) collaborated extensively to develop a process to more effectively coordinate land acquisitions with government and local community partners to achieve the highest priority shared conservation goals. The 2016 request includes a total of \$19.9 million for four collaborative landscapes consisting of nine projects. Within this total, the BLM includes \$9.2 million for the Upper Rio Grande landscape, \$5.8 million for the High Divide landscape, \$2.6 million for the Rivers of the Chesapeake landscape and \$2.3 million for projects that are part of the National Trails System landscape. The 2016 request also includes a total of \$4.0 million to benefit Sportsmen/Recreational access, a program change of +\$2.0 million from the 2015 enacted level.

**Permanent Appropriation: Permanent Land Acquisition** – The Department of the Interior will submit a legislative proposal to permanently authorize annual funding, without further appropriation or fiscal year limitation for the Land and Water Conservation Fund (LWCF). Starting in 2017, \$900 million annually in permanent funds would be available. During the transition to full permanent funding in 2017, the budget proposes \$900 million in total LWCF funding in FY 2016, comprised of \$500 million in permanent and \$400 million discretionary funds. The amounts requested include the authorized levels for the Department of the Interior and the Department of Agriculture. The 2016 permanent proposal includes \$55.4 million for BLM. See the Land Acquisition chapter for details.

## Powering Our Future

**Oil & Gas Management: Master Leasing Plans (+\$5,757,000/0 FTE)** – The 2016 budget request includes an increase of \$5.8 million to fund the development of oil and gas master leasing plans (MLPs) that are currently in process or are scheduled to begin in 2016. The BLM typically prepares MLPs in areas where the BLM anticipates high interest for leasing and there are potential conflicts with other natural resources. The MLPs build upon Resource Management Plan decisions by providing a more focused and detailed analysis, including an analysis of optimal lease parcel configurations and potential development scenarios; identifying and addressing resource conflicts and associated environmental impacts; and identifying mitigation strategies and constraints. Through the MLP process, the BLM analyzes and resolves these issues prior to conducting lease sales; therefore, the MLPs will provide oil and gas operators increased regulatory certainty when obtaining and developing lease parcels. The requested funding will be used to complete or begin MLPs within the BLM Utah, New Mexico, Colorado, and Wyoming State offices.

**Oil & Gas Management: Enhance Capacity of Oil and Gas Pilot/Project Offices (+\$3,000,000/+25 FTE)** – In addition to authorizing APD fees for 2016 through 2026, the National Defense Authorization Act, 2015, also permanently extends BLM access to mineral lease rent revenues deposited in the Permit Processing Improvement Fund, which have been the primary source of funding for the BLM Pilot Offices established under the Energy Policy Act

(EPAAct) of 2005. Under EPAAct, BLM's access to these mandatory rent revenues was set to expire at the end of fiscal year 2015. The budget estimates that \$16,120,000 in rental receipts will be deposited in the PPIF in 2016, an increase of \$702,000 over the 2015 estimate. Given the heavy workload and increasing need for the BLM to support increased domestic oil and gas production, the budget proposes to not only sustain, but enhance the capacity of current and future oil and gas pilot/project offices with an additional \$3.0 million in requested discretionary appropriations. Funding levels for pilot offices and other energy-intensive district and field offices have not kept pace with the increasingly time-consuming and complex work associated with processing current APDs. The requested funding will help the BLM reduce the backlog of APDs, accelerate the processing times of new APDs and other use authorizations, ensure new drilling projects meet stronger wellbore integrity requirements through implementation of the hydraulic fracturing regulation, and allow the BLM to address the complexities related to longer horizontal well completions. This will require better technical knowledge, training and a need to replace departing engineers due to retirement or other career moves.

**Oil & Gas Management: Automated Support System Modernization (+\$4,000,000/0 FTE):**

The 2016 budget request includes an increase of \$4.0 million to complete the final phase of the information technology modernization project to update the 19-year old Automated Fluid Minerals Support System (AFMSS). The AFMSS system is used for the collection, management, and sharing of information on authorized use of fluid minerals (e.g. oil, gas, geothermal and helium), including the issuance of drilling permits and collection of inspection and enforcement data across Federal and Indian onshore operations. The new system will automate workflows to be consistent with BLM standards and will minimize the need for manual data entry, thereby improving data quality. The funding increase of \$4.0 million requested as part of the 2016 President's Budget will be used for completing the final phase that will automate processes not supported by the current system, allowing BLM employees to gather and evaluate a wider range of information in a more efficient manner.

**Oil and Gas Permit Processing from Fees (net change of -\$25,375,000/-234 FTE) –**

As noted above, Section 3021 (d) of the National Defense Authorization Act, 2015 amended the Mineral Leasing Act to authorize APD fees in 2016 through 2026 and to permanently appropriate the majority of these fee revenues in 2016-2026 to process applications for permits to drill (APDs). As a result, the offsetting collection currently provided in the annual appropriations language is no longer required in 2016. The NDAA sets the APD fee at \$9,500, adjusted annually for inflation, an increase \$3,000 over the \$6,500 fee set in the 2015 appropriations act. The budget estimates that the \$9,500 APD fee will generate \$47.5 million in revenues in 2016. In 2016 through 2019, the NDAA permanently appropriates only 85 percent of this amount, estimated at \$40.4 million in 2016, and makes the other 15 percent of fee revenues subject to appropriation. The budget request proposes that Congress appropriate the remaining 15 percent of fee revenues (estimated at \$7.1 million) as part of the 2016 Interior appropriations bill. The net change of -\$25.4 million reflects the difference between the \$32.5 million provided in offsetting collections in 2015, and a current appropriation of \$7.1 million in 2016 that will be covered by the 15 percent of APD fees proposed to be appropriated.

**Oil and Gas Inspection Activities (Net program change of +\$6,874,000/+15 FTE):**

The 2016 budget request proposes to institute new onshore oil and gas inspection fees to cover the costs of BLM's inspection activities and reduce the net cost to taxpayers of operating BLM's oil and gas program. The estimated \$48.0 million in collections generated from the inspection fees will reduce the need for direct appropriations for the program by -\$41.1 million while also

providing for an increase of \$6.9 million above the amount appropriated in 2015 for this critical BLM management responsibility. The increased funding is aimed at correcting deficiencies identified by the Government Accountability Office in its February 2011 report, which designated Federal management of oil and gas resources, including production and revenue collection, as high risk. The BLM will also complete more environmental inspections to ensure environmental requirements are being followed in all phases of development. The fees are similar to those already in place for offshore operations. Proposed appropriations language to implement the fees is included in the proposed General Provisions for the Department of the Interior, and is shown below for convenience.

*SEC.114. (a) In fiscal year 2016 the designated operator of each lease on Federal or Indian lands, or each unit and communitization agreement that includes one or more Federal or Indian leases, that is subject to inspection under 30 U.S.C. 1718(b), and that is in force at the start of fiscal year 2016 shall pay a nonrefundable inspection fee that the Bureau of Land Management (BLM) shall collect and deposit in the "Management of Lands and Resources" account.*

*(b) Fees for 2016 shall be:*

*(1) \$700 for each lease or unit or communitization agreement with no active or inactive wells, but with surface use, disturbance or reclamation;*

*(2) \$1,225 for each lease or unit or communitization agreement with 1 to 10 wells, with any combination of active or inactive wells;*

*(3) \$4,900 for each lease or unit or communitization agreement with 11 to 50 wells, with any combination of active or inactive wells; and*

*(4) \$9,800 for each lease or unit or communitization agreement with more than 50 wells, with any combination of active or inactive wells.*

*(c) BLM will bill designated operators within 60 days of enactment of this Act, with payment required within 30 days of billing.*

*(d) If the designated operator fails to pay the full amount of the fee as prescribed in this section, BLM may, in addition to utilizing any other applicable enforcement authority, assess civil penalties against the operator under 30 U.S.C. 1719 in the same manner as if this section were a mineral leasing law as defined in 30 U.S.C. 1702(8).*

**Coal Management and Other Minerals Management: Mineral Tracking System (+\$2,200,000/0 FTE)** – The 2016 budget request includes an increase of \$1.1 million in the Coal Management program and \$1.1 million in the Other Minerals Management program to develop the Mineral Tracking System (MTS). The funding for the MTS will be used to support the automation and tracking of licenses, leases and permitting as well as inspection activities, including production verification, associated with coal and other solid mineral commodities (e.g. phosphate, sodium, potassium, etc.).

**Federal Oil and Gas Reforms** - The 2016 budget includes a package of legislative reforms to bolster and backstop administrative actions being taken to reform management of Interior's onshore and offshore oil and gas programs, with a key focus on improving the return to taxpayers from the sale of these Federal resources and on improving transparency and oversight. Proposed statutory and administrative changes fall into three general categories: (1) advancing royalty reforms; (2) encouraging diligent development of oil and gas leases; and (3) improving revenue collection processes.

Royalty reforms include evaluating minimum royalty rates for oil, gas, and similar products, adjusting the onshore royalty rate, analyzing a price-based tiered royalty rate, and repealing legislatively-mandated royalty relief. Diligent development requirements include shorter primary

lease terms, stricter enforcement of lease terms, and monetary incentives to get leases into production through a new per-acre fee on nonproducing leases. Revenue collection improvements include simplification of the royalty valuation process, elimination of interest accruals on company overpayments of royalties, and permanent repeal of Interior's authority to accept in-kind royalty payments. Collectively, these reforms will generate an estimated \$2.5 billion in revenue to the Treasury over 10 years, of which approximately \$1.7 billion will result from statutory changes. Many States will benefit from higher Federal revenue sharing payments as a result of these reforms.

**Repeal Geothermal Payments to Counties** - The Administration proposes to repeal Section 224(b) of the *Energy Policy Act of 2005*. Prior to passage of this legislation, geothermal revenues were split between the Federal government and States, with 50 percent directed to States, and 50 percent to the Treasury. The *Energy Policy Act of 2005* changed this distribution beginning in 2006 to direct 50 percent to States, 25 percent to counties, and for a period of five years, 25 percent to a new BLM Geothermal Steam Act Implementation Fund. The allocations to the new BLM geothermal fund were discontinued a year early through a provision in the 2010 Interior Appropriations Act. The repeal of Section 224(b) will permanently discontinue payments to counties and restore the disposition of Federal geothermal leasing revenues to the historical formula of 50 percent to the States and 50 percent to the Treasury. This results in estimated savings of \$4.0 million in 2015 and \$47 million over ten years.

### Engaging the Next Generation

**Soil, Water and Air Management: Youth in the Great Outdoors (+\$2,500,000/0 FTE)** – The 2016 budget request includes a \$2.5 million increase for the Secretary's Youth in the Great Outdoors Initiative in the Soil, Water & Air Management Program. Funding will allow the BLM to expand efforts to provide opportunities for "the next generation to play, learn, serve, and work" on public lands. Special consideration will be given to those programs that provide youth from diverse backgrounds with hands-on learning in Science, Technology, Engineering, and Mathematics (STEM), and prepare them for careers in STEM fields.

**Recreation Resources Management: Youth in the Great Outdoors (+\$2,500,000/0 FTE)** – The 2016 budget request includes a \$2.5 million increase for the Secretary's Youth in the Great Outdoors Initiative in the Recreation and Visitor Services program. Funding will allow the BLM to expand efforts to educate, engage, and employ young people. Special consideration will be given to those programs that provide youth from diverse backgrounds with hands-on learning in Science, Technology, Engineering, and Mathematics (STEM), and prepare them for careers in STEM fields.

### Sage-Grouse Conservation

**Wildlife Management: Implement Sage-Grouse Conservation Plans (+\$37,000,000/+20 FTE)** – The 2016 Budget request includes an increase of \$37.0 million to support the long-term stage of implementing 68 resource management plan revisions and amendments which describe habitat restoration and conservation needs across 27 priority areas in 11 States. The requested funds support activities that fall into three broad categories which involve both on-the-ground work and establishing the processes and organizational capability to plan and oversee the effort: managing resource uses in greater sage grouse habitats; restoring and reconnecting

greater sage grouse habitats; and assessing, monitoring, and reporting on conditions in priority habitats.

**Resource Management Planning, Assessment and Monitoring: Sage-Grouse Monitoring (+\$8,000,000/0 FTE)** – The 2016 budget request includes an increase of \$8,000,000 to develop assessment and monitoring protocols using core indicators, standardized field methods, remote sensing, and a statistically valid study design to provide nationally consistent and scientifically defensible information. These protocols will be used to meet the monitoring commitments made during the Greater Sage Grouse planning effort. These commitments include gathering information on terrestrial and aquatic site condition, ecological sites, special status species, treatments, disturbance of the public lands, fire, and land uses.

### Applied Science

**Wild Horse and Burro: Implementation of National Academy of Sciences (NAS) Recommendations (+\$2,993,000/0 FTE)** – The program increase will be used to: continue ongoing multi-year research studies that focus on the development of more effective and longer lasting population growth suppression methods including sterilization; conduct population inventories using recommended survey methods; continue the programmatic environmental impact statement initiated in FY 2015; engage in genetic diversity monitoring; continue development of a robust population model; continue sentinel population studies; and apply the most effective, available population growth suppression methods to on-range animals. The BLM will continue to develop a scientific foundation that will be the basis for an ecologically and financially sustainable Wild Horse and Burro Program.

**Resource Management Planning, Assessment, and Monitoring: Enterprise Geospatial System (+\$7,800,000 /0 FTE)** – The BLM is requesting an increase of \$7,800,000 to expand the implementation of BLM's enterprise geospatial system in 2016. This expansion will include the aggregation of BLM's data across administrative units, the centralization of those data in an enterprise system that supports all programs and offices, and the delivery of data to both desktop and mobile computers across the agency to improve efficiency. The enterprise geospatial system will support accurate and effective analysis and decision making across various priority landscape-scale initiatives, including the Greater Sage-Grouse Plan Implementation and Monitoring, Renewable and Conventional Energy Development, Rapid Ecoregional Assessments, Climate Change Adaptation, and Regional Mitigation.

### Rangeland Management

**Grazing Permit Issuance/Shift Cost to Fees (-\$2,976,000/-25 FTE)** – The budget proposes to shift a portion of the costs of issuing and managing grazing permits from appropriated funds to fees. The reduction of \$3.0 million in the request for appropriations combined with the estimated \$16.5 million in fee collections from a new grazing administration fee will result in a net increase of \$13.5 million in funding resources available to address the grazing permit backlog.

**Permit Administrative Processing Fee** - The 2016 budget includes appropriations language for a three-year pilot project to allow the BLM to recover some of the costs of issuing grazing permits/leases on BLM lands. The BLM would charge a permit administrative fee of \$2.50 per Animal Unit Month, which would be collected along with current grazing fees. The budget estimates the permit administrative fee will generate \$16.5 million in 2016 and that it will assist

the BLM in processing pending applications for grazing permit renewals. During the period of the pilot, the BLM will promulgate regulations for the continuation of the administrative fee as a cost-recovery fee, to be in place once the pilot expires.

*SEC. 417. Beginning on March 1, 2016, and only to the extent and in the amount provided in advance in appropriations Acts, the Secretary of Agriculture shall collect an annual administrative fee for grazing domestic livestock on National Forests in the 16 contiguous western States and on National Grasslands in the amount of \$2.50 per head month for cattle and its equivalent for other livestock. The administrative fee shall be billed and collected using the process as provided in sections 222.50 through 222.52 of title 36, Code of Federal Regulations. Fees collected may be used, subject to appropriation, to offset the cost of administering the livestock grazing program. Nothing in this provision shall affect the calculation, collection, distribution, or use of the grazing fee under 43 U.S.C. 1751(b), title III of the Bankhead Jones Farm Tenant Act (7 U.S.C. 1010), and implementing regulations.*

*In fiscal year 2016, beginning on March 1, 2016, and only to the extent and in the amount provided in advance in appropriations Acts, the Secretary of the Interior shall collect an administrative fee to offset the increased cost of administering the livestock grazing program on public lands managed by the Bureau of Land Management by charging \$2.50 per Animal Unit Month, which shall be billed, collected, and subject to the penalties using the same process as the annual grazing fee in 43 C.F.R. 4130.8–1. Penalties assessed shall be deposited in the General Fund of the Treasury. Nothing in this provision affects the calculation, collection, distribution, or use of the grazing fee under 43 U.S.C. 315–315rr, 43 U.S.C. 1751(b), 43 U.S.C. 1905, Executive Order 12548, or administrative regulation.*

### Western Oregon

**Other Forest Resources Management: Reduce Core Capability (-\$3,753,000/24 FTE)** – A decrease of \$3.8 million will reduce a range of activities, including inventory and monitoring, rangeland health assessments and restoration projects, and activities in support of recreation, soil, water, and air. Some cost savings are expected by primarily thinning stands less than 80 years old, where less pre-disturbance surveys are needed.

**Resource Management Planning: Planned Completion of Six Resource Management Plans (-\$3,175,000/0 FTE)** –The BLM plans to complete the six revised RMPs in Spring 2016. As the final environmental impact statements are released and decisions are signed, the program's emphasis will be to support plan implementation with continued collaboration both internally and externally.

### Other Program Changes

**Soil, Water and Air Management: Enhance Core Capabilities (+\$1,520,000/0 FTE)** – The 2016 budget request includes a program increase of \$1.5 million. The additional funds will be used to increase regional air resource monitoring and modeling efforts, specifically designed to share data across Federal agencies and support regional conventional and renewable energy development; enhance the development of Ecological Site Descriptions on range lands and within pilot areas for forestry, riparian and wetlands; increase water quantity compliance monitoring and reporting necessary to meet regulatory requirements as well as protect Federal

reserve water rights; and support watershed assessment projects that promote an integrated implementation approach across BLM programs.

**Riparian Management: Enhance Core Capability (+\$1,340,000/+2 FTE)** – The 2016 budget request includes a \$1.3 million increase to strengthen BLM’s core capability to pursue a landscape approach to managing BLM vegetation resources, including managing over 150,000 miles of riparian areas and nearly 13 million acres of wetlands. Increased funding will be used to treat acres not meeting land health standards in sage-grouse habitat and to identify and prioritize management and restoration efforts and to support BLM management decisions. Increased funding will also be used for monitoring and assessment of drought conditions with a goal of improving the quality and quantity of water for wildlife.

**Resource Management Planning, Assessment and Monitoring:**

**Assessment, Inventory and Monitoring Strategy (AIM) (+\$5,000,000 /+3 FTE)** – The BLM is requesting an increase of \$5,000,000 to support implementation of its comprehensive assessment, inventory and monitoring strategy. The increase will facilitate an integrated approach in managing resources across multiple scales and determining the condition and trends in public lands across large landscapes. The AIM Strategy is intended to reach across programs, jurisdictions, stakeholders, and agencies to provide data and information valuable to decision makers. In 2016, five interrelated monitoring efforts will be implemented to inform the regional mitigation and monitoring strategies for the Solar Programmatic EIS and for the Greater Sage-Grouse Planning Initiative.

**Cadastral, Lands and Realty: Transmission Corridors (+\$5,000,000/0 FTE)** – The requested funding would position the BLM to strategically plan for the long term increased demand and updates to the electric grid throughout the West with an improved and updated assessment process for the development and siting of energy corridors and rights-of-way (ROWs). Strategic planning would take into consideration renewable energy development including wind, solar, geothermal and hydropower. Planning activities would include revising land use plans in coordination with Federal, State, local and tribal stakeholders; revising energy corridors; developing landscape-level mitigation and best management practices; and synchronizing BLM and U.S. Forest Service (USFS) land use/management plans with transmission planning conducted by the Western Electricity Coordinating Council.

**Abandoned Mine Lands: Red Devil Mine Remediation (+\$2,800,000/0 FTE)** – The Red Devil Mine (RDM), located on the Kuskokwim River in Southwestern Alaska, is an abandoned cinnabar mine which produced mercury from 1939 thru 1971. In 2009, the BLM initiated a Remedial Investigation/Feasibility Study (RI/FS) of the Red Devil Mine site under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The \$2.8 million proposed increase for 2016 would be used for ground and surface water monitoring, Proposed Plan Development and Remedial Design/Remedial Action (RD/RA) development.

**Annual Maintenance: Enhance Core Capability (+500,000/0 FTE)** – The increase will fund additional preventive maintenance on constructed assets supporting administrative, recreational, and infrastructure needs, with an emphasis in areas under greatest pressure from community growth.

**Deferred Maintenance: High-Priority Projects (+\$4,240,000/0 FTE)** – The requested increase will support additional facility repair projects that otherwise would not have been funded.

Priorities will be identified using the Department's capital investment guidelines. The projects include sustainability upgrades, radio infrastructure, and bridge, dam, and facilities repairs on critical assets.

**Challenge Cost Share: Climate Resilient Landscapes (+\$10,000,000/0 FTE)** - The increase of \$10.0 million in Challenge Cost Share funds will be used to expand collaborative partnerships and projects that address the adverse impacts of climate change on public resources. The BLM will prioritize projects using criteria developed in coordination with the U.S. Fish and Wildlife Service and National Park Service to conserve and restore the most vulnerable lands. Projects will invest in heritage resources, fish, wildlife and plants, and recreation lands that can recover quickly from disturbance change. The BLM will use novel, cost-effective methods maximizing the return on investment.

**Administrative Support: Health Benefits for Seasonal Employees (+\$2,275,000/0 FTE)** – On July 29, 2014, the Office of Personnel Management issued a proposed rule that would expand eligibility for enrollment under the Federal employee health benefits (FEHB) program to certain temporary, seasonal and intermittent employees. This regulation would make FEHB coverage available to these newly eligible employees no later than January 2015. The Department developed a model to estimate the number of employees who would accept the new coverage and the estimated cost to the government.

**Administrative Support: Enhance Core Capabilities (+\$1,000,000/0 FTE)** – The increased funding supports increased costs associated with operating the BLM's management and support infrastructure, continuous improvements to internal controls and compliance to support mission assurance and accountability, and supports human capital planning and workforce planning.

### Permanent Reprogrammings and Internal Transfers

**Transfer to National Conservation Lands (+\$5,009,000/+0 FTE)** – In 2016, the BLM will transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount these various MLR subactivities have contributed to the operations of the National Conservation Lands in recent years.

### Other Legislative Proposals

**National BLM Foundation** – The budget request includes a legislative proposal to establish a congressionally-chartered BLM Foundation. This foundation is an opportunity to leverage private funding to support public lands, achieve shared outcomes, focus public support of the BLM mission, and improve messaging.

The legislative proposal to be transmitted soon will follow the structure of statutes establishing similar foundations for other land management agencies. As a charitable corporation under section 501(c)(3) of the Internal Revenue Code of 1986, the foundation will not be considered an agency of the United States and will be authorized to encourage, accept and administer

private gifts of money for the benefit of BLM activities. It will also undertake activities that further the purposes of public lands and support the mission of BLM.

As with similar organizations, the foundation will have a board of directors appointed by the Secretary for set terms and may receive support from the Secretary. For the purposes of audits, it will be treated as a private corporation under Federal law. The foundation will not be authorized to perform any function the authority for which is provided to BLM under any other provision of law.

**Mining Law** – The 2016 budget includes a legislative proposal to reform hardrock mining by instituting a leasing process under the Mineral Leasing Act of 1920 (MLA) for certain minerals (gold, silver, lead, zinc, copper, uranium, and molybdenum). Half of the receipts will be distributed to the State where the lease is located and half would be deposited to the Treasury's General Fund. The proposal also increases annual maintenance fees and eliminates the fee exemption for miners holding 10 or fewer mining claims.

a

**Federal Land Transaction Facilitation Act (FLTFA)** – The 2016 Budget includes a proposal to reauthorize FLTFA and allow lands identified as suitable for disposal in recent land use plans to be sold using the FLTFA authority. FLTFA sales revenues would continue to be used to fund the acquisition of environmentally sensitive lands and the administrative costs associated with conducting sales.

**Hardrock Abandoned Mine Land Fund** – To provide additional resources for the reclamation of abandoned hardrock mines, the 2016 budget proposes a new AML fee on hardrock production. Just as the coal industry is held responsible for abandoned coal sites, the Administration proposes to hold the hardrock mining industry responsible for the remediation of abandoned hardrock mines. The legislative proposal will levy an AML fee on uranium and metallic mines on both public and private lands. The proposed AML fee on the production of hardrock minerals will be charged on the volume of material displaced after January 1, 2016. The receipts would be split between Federal and non-Federal lands. The Secretary will disperse the share of non-Federal funds to each State and Tribe based on need. Each State and Tribe will select its own priority projects using established national criteria. The proposed hardrock AML fee and reclamation program will operate in parallel with the coal AML reclamation program as part of a larger effort to ensure the Nation's most dangerous abandoned coal and hardrock AML sites are addressed by the industries that created the problems.

**Recreation Fees Mandatory Appropriation** – The 2016 budget proposes legislation to permanently authorize the Federal Lands Recreation Enhancement Act, which was extended by P.L. 113-235 through September 30, 2016. In addition, as a short-term alternative to proposed legislation for long-term reauthorization, the 2016 budget proposes appropriations language to further extend authorization for the Federal Lands Recreation Enhancement Act through September 30, 2017.

**Reauthorization of Secure Rural Schools payments** – In 2012, under PL 112-141, the Secure Rural Schools Act was reauthorized for one year (2012). The payments made to counties in 2013 (for 2012) again used a formula based on acreage of Federal land, previous payments, and per capita personal income. In October 2013, Congress enacted Public Law 113-40 which extended payments for one year to the O&C Grant Lands and the Coos Bay

Wagon Road counties through fiscal year 2013 (with the payment made in 2014). The 2016 President's budget includes a legislative proposal to reauthorize the Secure Rural Schools (SRS) Act for five years, starting in 2015, with funding through mandatory U.S. Forest Service appropriations. This SRS proposal revises the allocation split between the three portions of the program from the current authority emphasizing enhancement of forest ecosystems, restoration and improvement of land health and water quality, and the increase of economic activity.

If no proposal is enacted, payments to O&C and CBWR counties in 2016 would be under the 1937 and 1939 statutes. For more information on this proposal, see the U.S. Forest Service 2015 Budget Justification.

# Performance Overview

# PERFORMANCE OVERVIEW

This section discusses the BLM's Priority Goals and their relationship to the BLM's major initiatives, and the BLM's contributions to the Department of the Interior's Strategic Plan.

## Priority Goals

The four areas where the BLM contributes to DOI's success in meeting its priority goals are:

- Renewable Energy Resource Development,
- Climate Change Adaptation,
- Youth Stewardship of Natural and Cultural Resources, and
- Oil & Gas Resources Management.

The BLM programs affected include: Soil, Water, and Air Management; Range Management; Forestry; Riparian Management; Wildlife and Fisheries Management; Threatened and Endangered Species Management; Wild Horse and Burro Management; Recreation Management; National Monuments and Conservation Areas; Wilderness Management; Oil and Gas Management; and Renewable Energy Management.

**Renewable Energy Resource Development** – By September 30, 2015, increase approved capacity authorized for renewable (solar, wind, and geothermal) energy resources affecting Department of the Interior managed lands, while ensuring full environmental review, to at least 16,500 Megawatts since 2009.

*BLM Contribution:* The BLM's Renewable Energy Management Program contributes to the Secretary's Powering Our Future and Responsible Use of the Nation's Resources Initiative. Public lands managed by the BLM in the western U.S. have high potential for wind, solar and geothermal energy production. Public lands also provide crucial transmission corridors for renewable energy generated on non-Federal lands. The BLM has identified approximately 20 million acres with wind energy potential in 11 western States, 22 million acres with solar energy potential in six southwestern States, and 149 million acres with geothermal potential in several western States and Alaska. The 2016 President's Budget requests \$29.4 million for Renewable Energy Management, which maintains funding at the 2015 enacted level plus an increase of \$295,000 for fixed costs.

*Implementation Strategy:* In 2016, the BLM will implement a competitive leasing program using new regulations for solar and wind energy leasing developed under Federal Land Policy and Management Act authority. Prior to that, it will continue to selectively offer for competitive leasing some lands made available by the solar energy Programmatic Environmental Impact Statement (PEIS). The Record of Decision on the Solar PEIS includes 17 solar energy zones, containing approximately 285,000 acres potentially available for solar energy development. The BLM has added two additional solar energy zones through land use planning efforts for the Arizona Restoration Design Project and the West Chocolate Mountains Renewable Energy Evaluation Area in California. More are anticipated with future land use planning efforts. Making these lands available for BLM leasing proposals provides for the best siting locations for environmentally-sound solar energy development projects. The BLM is continuing this leasing

program through a nomination and request for proposal process, until competitive leasing is fully established through rulemaking.

In 2016, a West Wide Wind Mapping Project will be available to identify wind energy exclusion areas and sensitive resource conflicts for wind energy development on public lands. This project is expected to be completed in 2015 and be available to assist in BLM land use planning efforts and in siting reviews of proposed wind energy projects on BLM public lands in the western States. The wind energy constraint analysis methodology will further streamline the environmental review of site-specific wind projects. It will also broaden the analysis of additional planned transmission development. The final Wyoming wind analysis report will provide new information to address a greater level of wind energy development in Wyoming.

*Performance Metrics:* The Department is presently employing a set of internal measures and milestones to monitor and track achievement of the priority goals. Progress in these areas is reported and reviewed throughout the year by the Deputy Secretary's Principals Operations Group to identify and address any need for enhanced coordination or policy measures to overcome barriers to the achievement of the priority goal. The BLM has identified the following existing Strategic Plan measure that relates to this priority goal: "Number of megawatts of approved capacity authorized on public land for renewable energy development while ensuring full environmental review." Through the end of 2014, the BLM issued decisions on solar, wind, and geothermal energy development project proposals with a combined capacity of more than 14,140 megawatts under the priority goal. Projects approved in 2015 and 2016 are projected to provide sufficient additional capacity to reach the goal of over 16,500 megawatts of capacity. Though the specifics of any priority goals beyond FY 2015 will be developed as part of the FY 2017 budget process, the BLM will continue its work on processing renewable energy rights-of-way in FY 2016 and expects to contribute 16,500 MW towards the 17,000 megawatts target for the Department as a whole by the end of 2016.

***Climate Change Adaptation*** – By September 30, 2015, the Department of the Interior will demonstrate maturing implementation of climate change adaptation, as scored when implementing strategies provided in its Strategic Sustainability Performance Plan.

*BLM Contribution:* The BLM will work within five broad strategies developed by DOI to demonstrate implementation of climate change adaptation. These five broad strategies are mainstream and integrate climate change adaptation into both agency-wide and regional planning efforts; ensure agency principals demonstrate commitment to adaptation efforts through internal communications and policies; ensure workforce protocols and policies reflect projected human health and safety impacts of climate change; design and construct new or modify/manage existing agency facilities and/or infrastructure with consideration for the potential impacts of projected climate change; and update agency external programs and policies to plan for and address the impacts of climate change. Each of these five strategies will have a BLM component that will contribute to the Department's overall goal of addressing the impacts of climate change. The 2016 BLM budget request includes \$25.0 million for climate change adaptation an increase of \$10 million over the 2015 enacted budget.

*Implementation Strategy:* In 2015 and 2016, the BLM will identify priority focal areas for funding to restore or enhance landscape resiliency as one of many efforts to integrate climate change adaptation into planning efforts. The Bureau will integrate national science committee recommendations into decision making as part of its ongoing management commitment. Similarly, the BLM will review design criteria for climate change considerations in deferred

maintenance or capital improvement projects over \$1.0 million to ensure they incorporate best available sustainable measures, reduce water use to help mitigate possible water shortages, install photovoltaic cells where possible to help alleviate energy use, and use inspections to identify potential energy savings in facilities. Each of these measures helps to alleviate greenhouse gas emissions. Finally in working with our public land users, the BLM will develop a program to help visitors understand how climate change may affect their ability to use and enjoy the public lands.

*Performance Metrics:* The Department is presently employing a set of internal measures and milestones to monitor and track achievement of the priority goals. Progress in these areas will be reported and reviewed throughout the year by the Deputy Secretary's Principals Operations Group to identify and address any need for enhanced coordination or policy measures to overcome barriers to the achievement of the priority goal.

**Youth Stewardship of Natural and Cultural Resources** – By September 30, 2015, the Department of the Interior will provide 40,000 work and training opportunities over two fiscal years (FY2014 and FY 2015) for individuals age 15 to 25 to support the mission of the Department. The Department is proposing to expand this goal to provide 100,000 work and training opportunities over four fiscal years, FY 2014 through FY 2017, for individuals ages 15 to 35.

*BLM Contribution:* The BLM has incorporated this priority goal into its Celebrating and Enhancing America's Great Outdoors Initiative. The Bureau will continue to focus on providing a continuum of experiences through its youth education, engagement, and employment programs. Special consideration is given to those programs that involve young people ages 15 to 25 through various student employment programs, the 21<sup>st</sup> Century Conservation Service Corps and other youth partnership organizations. The BLM is also emphasizing recruiting youth from diverse backgrounds. Programs for school age youth such as Hands on the Land and conservation corps and internship programs for high school and older youth expose young people to natural and cultural resources and to career pathways in those fields. The 2016 BLM budget includes \$6.0 million for the Celebrating and Enhancing America's Great Outdoors initiative, which is \$5.0 million above the 2015 enacted level. This funding will provide youth opportunities assisting the BLM with trail construction and maintenance, habitat restoration, inventory and monitoring in support of a wide range of programs, such as archaeological resources; wilderness characteristics; soil, water, and air resources as well as climate change impacts.

*Implementation Strategy:* In 2016, the BLM will continue to pursue opportunities to facilitate, develop, and sustain partnership activities to support BLM's mission and will continue pursuing collaborative opportunities to educate, engage, and employ youth, particularly throughout the National Landscape Conservation System.

*Performance Metrics:* The Department is presently employing a set of internal measures and milestones to monitor and track achievement of the priority goals. Progress in these areas will be reported and reviewed throughout the year by the Deputy Secretary's Principals Operations Group to identify and address any need for enhanced coordination or policy measures to overcome barriers to the achievement of the priority goal.

***Oil and Gas Resources Management*** – By September 30, 2015, the BLM will increase the completion of inspections of Federal and Indian high-risk oil and gas cases by nine percent over FY 2011 levels, which is equivalent to covering as much as 95 percent of the potential high-risk cases.

***BLM Contribution:*** The inspection of high-risk-producing oil and gas cases ensures that hydrocarbon production on federally-managed lands is properly accounted for and results in accurate royalty payments to the public and Indian owners of the minerals. Oil and gas production on federally-supervised lands represents a significant part of the Nation's hydrocarbon production. Operating regulations at 43 CFR 3161.3 (a) require the BLM to inspect all leases which produce high volumes of oil or natural gas and those leases that have a history of non-compliance at least once a year. By focusing on high-risk-producing cases, rather than randomly selecting producing cases for inspection, the BLM's resources are more efficiently used. The high-risk cases account for about 13 percent of the total cases but account for over 60 percent of the oil and gas produced on Federal and Indian mineral estates. This effort is a component of addressing the deficiencies identified in the GAO High Risk report, including ensuring data on production verification and royalties are consistent and reliable, meeting goals for oil and gas verification inspections, and ensuring that informal employee training is supported by formalized training courses offered on a consistent basis. The 2016 President's Budget proposes establishing inspection fees to cover the cost of the inspections. The estimated collections generated from the proposed inspections fees is \$48.0 million. This will allow for a reduction of \$41.1 million in requested appropriations (the amount of the 2015 appropriation for inspection activities), resulting in a net increase of \$6.9 million in resources available for BLM inspections and oversight. The 2016 budget also proposes an increase to complete the final phase of its Automated Fluid Minerals Support System (AFMSS) modernization project allowing collection of inspection and enforcement data across Federal onshore operations to strengthen BLM's oversight and permitting functions and enable the BLM to effectively implement its leasing reforms.

***Implementation Strategy:*** High-risk cases are determined by seven risk factors, four generated by the BLM and three derived from the Office of Natural Resources Revenue risk model. The four BLM factors are: production rating; number of missing Oil and Gas Operations Reports; non-compliance rating; and last production inspection date rating. The Field Offices inspect the cases throughout the year, which are then entered into AFMSS. The Washington Office then runs reports from AFMSS showing the number of high-risk-production inspections completed. The number of high-risk-production cases is determined by the individual Field Offices, based on the Bureau's risk-based inspection strategy. The milestones for 2015 and 2016 will be 95 percent or above at the end of the year.

***Performance Metrics:*** The BLM is presently employing the following milestones to monitor and track achievement of this priority goal: 1) Revising Onshore Oil and Gas Orders 3, 4, 5, and 9 which cover how oil and gas is measured and stored in a secure facility to prevent theft and mishandling of production, waste, and beneficial use; 2) Evaluating and adjusting onshore royalty rates; and 3) Reinstating training for managers on oil and gas operations. Progress in these areas is reported and reviewed throughout the year by the Deputy Secretary's Principals Operations Group to identify and address any need for enhanced coordination or policy measures to overcome barriers to the achievement of the priority goal.

## **The BLM's Contribution to the Department's Strategic Plan**

The FY 2014-2018 DOI Strategic Plan, in compliance with the principles of the GPRA Modernization Act of 2010, provides a collection of mission objectives, goals, strategies and corresponding metrics that provide an integrated and focused approach for tracking performance across a wide range of DOI programs. While the DOI Strategic Plan for 2014 – 2018 is the foundational structure for the description of program performance measurement and planning for the 2016 President's Budget, further details for achieving the Strategic Plan's goals are presented in the DOI Annual Performance Plan and Report (APP&R). Bureau-and program-specific plans for 2016 are fully consistent with the goals, outcomes, and measures described in the 2014-2018 version of the DOI Strategic Plan and related implementation information in the Annual Performance Plan and Report (APP&R).

### Goal Performance Table

**Target Codes:** SP = Strategic Plan measure, BUR = Bureau specific measure

**Type Codes:** C = Cumulative measure, A = Annual measure

Supporting Performance Measures	2011 Actual	2012 Actual	2013 Actual	2014 Actual	2015 Enacted	2016 President's Budget
<b>Mission Area 1: Celebrating and Enhancing America's Great Outdoors</b>						
<b>Goal 1: Protect America's Landscapes</b>						
<i>Strategy 1: Improve land and water health.</i>						
Percent of DOI stream/shoreline miles that have achieved desired conditions where condition is known and as specified in management plans. (SP)	85% 132,466/ 154,976	86% 133,055/ 155,274	86% 133,866 155,151	85% 132,344/ 154,976	85% 131,976/ 154,976	85% 131,976/ 154,976
<b>Contributing Programs:</b> Land Resources; Wildlife and Fisheries Management; O&C Resources; Contributed Funds; Challenge Cost Share; and Other Subactivities.						
Percent of DOI acres that have achieved desired conditions where condition is known and as specified in management plans. (SP)	63% 155,970,340/ 248M	66% 163,558,379/ 248M	63% 155,210,537/ 248M	63% 155,317,905/ 248M	64% 155,500,000/ 248M	63% 155,600,000/ 248M
<b>Contributing programs:</b> Land Resources; Wildlife Management; O&C Resources Management; Contributed Funds/Reimbursables; and Other Subactivities.						
Percent of baseline acres infested with invasive plant species that are controlled. (SP)	0.99% 333,177/ 35,762,000	0.57% 204,667/ 35,762,000	0.68% 246,710/ 35,762,000	0.58% 210,395/ 35,762,000	1.3% 1,038,157/ 79,236,079	1.3% 1,038,157/ 79,236,079
<b>Comments:</b> Reporting of this measure changed based on a new baseline inventory done in 2014. The target also reflects changes due to the performance measure revision.						
<b>Contributing Programs:</b> Land Resources; Burned Area Rehabilitation; O&C Resources Management; Challenge Cost Share; and Other Subactivities.

# Crosscutting Programs

## Crosscutting Programs

The BLM has a number of programs that are funded through multiple sources. The National Conservation Lands is one such example; its components are described below. In addition, the BLM has partnership, education, and volunteer programs that are supported by a number of funding sources. Service First and BLM's partnership program provide tools to BLM managers to more efficiently and effectively use funding and to provide results on the ground.

### The National Conservation Lands

The BLM is unique in its mission of managing the public lands for multiple use and sustained yield of resources, including conservation. More than 30 million acres of BLM land is recognized for outstanding conservation values and designated for special management by Acts of Congress or Presidential Proclamations.

The BLM manages these special areas to maintain and enhance their conservation values with the goal to conserve, protect, and restore these important landscapes and their outstanding cultural, ecological, and scientific values. These areas range from broad Alaskan tundra to red-rock deserts and from deep river canyons to rugged ocean coastlines and include some of America's finest natural and cultural treasures.

The National Conservation Lands include the following unit designations. Each of these unit designations and information about each unit type can be found in the following sections.

- National Monuments and National Conservation Areas;
- Wilderness/Wilderness Study Areas;
- National Wild and Scenic Rivers; and
- National Scenic and Historic Trails.

**Natural and Cultural Benefits** - The diverse ecosystems designated in the National Conservation Lands protect a myriad of endangered species and habitats, and the diverse ecosystems help ensure that the Nation's extraordinary biodiversity will be sustained for present and future generations to enjoy. As landscape pressures associated with drought, climate change and the effects of landscape stressors on species habitat and migration corridors continue to be of concern, units of the National Conservation Lands offer opportunities for scientists to conduct important research and data collection. Additionally, the National Conservation Lands contain over 30 percent of all special-status animal species found on BLM lands.

Also preserved within the National Conservation Lands are priceless artifacts from our Nation's history, including explorer William Clark's 1806 signature on a sandstone bluff in Montana. This signature is the only on-site physical evidence of the Lewis and Clark expedition. Dinosaurs and other prehistoric species left myriad evidence of their passing through the National Conservation Lands and many of their fossils are now displayed in visitor centers and cooperating museums.

**Recreation Benefits** - As wide-open spaces and opportunities for natural exploration continue to dwindle, the National Conservation Lands conserve over 30 million acres of rugged landscapes for the public to explore and enjoy and hosts more than one-fourth of all recreation on BLM lands. These diverse lands provide opportunities for recreationists of all kinds, from white-water rafters and rock climbers to hunters and fishermen, hikers and skiers to boaters and off-highway vehicle riders. The BLM manages units that include over 2,700 recreation sites and 22 visitor centers, and serves approximately 14 million visitors annually. Because of the high rate of visitation, the communities surrounding the National Conservation Lands reap significant economic benefits through tourism services. In southeast Nevada, Red Rock Canyon National Conservation Area alone serves over one million visitors each year. These visitors generate more than \$1.7 million in recreation fees that are reinvested in the unit and directly contribute to the regional tourist economy, benefitting local communities and businesses located there.

The BLM, in cooperation with local communities, supports the creation of recreation and visitor facilities in nearby gateway communities rather than building extensive facilities within the units. In New Mexico, the BLM worked with the Las Cruces Museum of Nature and Science to establish exhibits on the Prehistoric Trackways National Monument. The new visitor center will provide educational opportunities about BLM-managed resources at the nearby Prehistoric Trackways National Monument. These facilities also draw additional tourism that supports the local economy and creates economic diversity.

These lands are critical to the implementation of important Administration initiatives, including America's Great Outdoors and Let's Move Outside, and the Department of the Interior's Youth in the Great Outdoors Initiative. For example, the National Conservation Lands connect youth, veterans, and families to the outdoors through a number of programs and recreational opportunities including internship opportunities for students, employment and training opportunities for veterans, and volunteer opportunities on designated units of the National Conservation Lands. The incredible beauty and sense of adventure provided by these lands entice both individuals and families to be a part of these public lands.

In addition to the revenue generated by tourism, the National Conservation Lands also provide revenue from energy development, ranching, mineral extraction, and art. These lands must be conserved for the future and the BLM promotes the sustainable use of these lands as supported through the proclamation or designating legislation.

The following table displays the amounts of funding allocated to the National Conservation Lands. These amounts represent recurring base funding only.

<b>National Conservation Lands</b>				
	<b>2014 Actual</b>	<b>2015 Enacted</b>	<b>2016 Request</b>	<b>Program Change from 2015</b>
<b>Management of Land &amp; Resources:</b>				
NMs & NCAs	31,819	31,819	48,470	+11,181

<b>Total, National Conservation Lands</b>	<b>64,160</b>	<b>64,119</b>	<b>81,079</b>	<b>+11,181</b>

\*The total change for NMs & NCAs is +\$16,651 which also includes internal transfers of +\$5,009 and fixed cost of +461. See the National Conservation Lands activity chapter for details on this transfer.

## Units of the National Landscape Conservation System

The following table displays the individual units, by designation type, included in BLM's National Landscape Conservation System. The NLCS includes National Monuments, National Conservation Areas and Similar Designations, Wilderness Areas, Wilderness Study Areas, National Wild and Scenic Rivers, National Historic Trails, National Scenic Trails, and Other Congressional Designations.

<b>20 National Monuments</b>		
<b>Arizona</b>	Agua Fria	70,900 acres
	Grand Canyon-Parashant	808,747 acres
	Ironwood Forest	128,734 acres
	Sonoran Desert	486,600 acres
	Vermilion Cliffs	279,568 acres
<b>California</b>	California Coastal	3937 acres along 840 miles of coastline
	Carrizo Plain	208,698 acres
	Fort Ord National Monument	7,205 acres
	Santa Rosa-San Jacinto Mountains	94,055 acres
<b>Colorado</b>	Canyons of the Ancients	174,240 acres
<b>Idaho</b>	Craters of the Moon	274,693 acres
<b>Montana</b>	Pompeys Pillar	51 acres
	Upper Missouri River Breaks	374,976 acres
<b>New Mexico</b>	Kasha-Katuwe Tent Rocks	4,124 acres
	Prehistoric Trackways	5,255 acres
	Organ Mountains-Desert Peaks	496,330 acres
<b>Oregon</b>	Rio Grande del Norte	242,555 acres
	Cascade-Siskiyou	62,814 acres
	San Juan Islands	970 acres
<b>Utah</b>	Grand Staircase-Escalante	1,866,134 acres

<b>21 National Conservation Areas and Similar Designations</b>		
<b>Alaska</b>	Steese NCA	1,208,624 acres
<b>Arizona</b>	Gila Box Riparian NCA	21,767 acres
	Las Cienegas NCA	41,972 acres
	San Pedro Riparian NCA	55,495 acres
<b>California</b>	King Range NCA	56,167 acres
	Headwaters Forest Reserve	7,542 acres
	Piedras Blancas Historic Light Station Outstanding National Area (ONA)	18 acres
<b>Colorado</b>	McInnis Canyon NCA	123,430 acres
	Gunnison Gorge NCA	62,844 acres
	Dominguez-Escalante NCA	210,172 acres
<b>Florida</b>	Jupiter Inlet Lighthouse ONA	63 acres
<b>Idaho</b>	Morley Nelson Snake River Birds of Prey NCA	482,100 acres
<b>Nevada</b>	Black Rock Desert High Rock Canyon Emigrant Trails NCA	799,165 acres
	Red Rock Canyon NCA	198,065 acres
	Sloan Canyon NCA	48,438 acres
<b>New Mexico</b>	Fort Stanton-Snowy River Cave NCA	24,977
	El Malpais NCA	230,000 acres
<b>Oregon</b>	Steens Mountain Cooperative Management and Protection Area	428,446 acres
	Yaquina Head ONA	95 acres
<b>Utah</b>	Red Cliffs NCA	44,825 acres
	Beaver Dam Wash NCA	63,478 acres

**221 Wilderness Areas** **8,736,691 acres**

**545 Wilderness Study Areas** **12,835,035 acres**

**69 National Wild and Scenic Rivers** **2,416 miles**

1,164,894 acres (20% of the national system)

<b>11 National Historic Trails</b>	
<b>5,343 miles</b>	
California	1,493 miles
El Camino Real de Tierra Adentro	60 miles
Iditarod	418 miles
Lewis and Clark	369 miles
Mormon Pioneer	498 miles
Nez Perce	70 miles
Oregon	848 miles
Pony Express	596 miles
San Juan Bautista De Anza	103 miles
Old Spanish	887 miles
Washington Rochambeau Revolutionary Route	1 mile

<b>5 National Scenic Trails 667 miles</b>	
Arizona	31 miles
Continental Divide	389 miles
Pacific Crest	233 miles
Pacific Northwest	12 miles
Potomac Heritage	2 miles

<b>Other Congressional Designations</b>	
California Desert*	10,671,080 acres

\*The lands of the California Desert are congressionally designated, but are not a part of the National Landscape Conservation System.

### **National Wild and Scenic Rivers System**

The National Wild and Scenic Rivers System (WSR) was created by Congress in 1968 to preserve rivers with outstanding natural, cultural, and recreational values in a free-flowing condition for the enjoyment of present and future generations. The Act is notable for safeguarding the special character of these rivers, while also recognizing the potential for their appropriate use and development. It encourages river management that crosses political boundaries and promotes public participation in developing goals for river protection. Through the America's Great Outdoors (AGO) initiative, the President emphasized the value of rivers and waterways to our Nation's history, economy, and way of life. Rivers connect people and communities to America's great outdoors and are vital migration corridors for fish and wildlife. In the 21<sup>st</sup> century, healthy rivers will enhance the resilience of human and natural communities. Millions of people visit WSRs annually either on their own or through hundreds of permitted commercial outfitters. This use provides significant economic impact to local communities and helps them to sustain the natural heritage of their wild and scenic rivers.

The BLM WSR program is part of the National Conservation Lands and engages local communities to help them foster a sense of shared stewardship and pride in their local WSRs.

The BLM has the responsibility to protect and enhance river values (free flowing condition, water quality, and outstandingly remarkable values) on 69 designated rivers in seven States covering over 2,400 miles and 1,165,000 acres (about 20 percent of the WSR ) and on hundreds of eligible and suitable rivers across the western States. The BLM WSR Program focuses on the protection and enhancement of river values with the following activities:

- Evaluate free flowing rivers to determine if they are eligible for inclusion within the WSR and assign a tentative classification (wild, scenic or recreational) for rivers determined eligible;
- Submit recommendations resulting from studies on potential WSRs;
- Manage eligible, suitable and designated WSRs to protect and enhance their free flowing condition, water quality and outstandingly remarkable values;
- Develop and implement statutorily required comprehensive river management plans that reflect the requirements of the WSR Act and national policies and guidance;
- Monitor designated WSR and eligible and suitable river segments to minimize noxious weed infestations, trespass activities, and the impacts from commercial and non-commercial recreation activities;

- Provide visitor services and public information and interpretation through publications, wayside exhibits, appropriate instructional signage, and river-related visitor centers;
- Restore riparian habitats to healthy and functioning condition by removing or modifying activities creating unacceptable impacts along rivers;
- Protect or enhance water quality on WSRs by requiring and implementing best management practices for new land use authorizations and activities, changing current management practices where appropriate, and restoring degraded watershed function;
- Make determinations regarding the impacts of proposed water resources projects on designated WSRs, congressionally authorized study rivers, and on rivers identified for study by the BLM; and
- Maintain relationships with tribal governments, other Federal agencies, State and local governments, friends' groups and other non-profit organizations, and the general public concerned with comprehensive river-related plans, studies, and/or management.

The BLM's revised Wild and Scenic Rivers Manual provides policy and program direction for identification, evaluation, planning, and management of designated rivers, congressionally authorized study rivers, and BLM-identified eligible and suitable rivers. The BLM will continue to implement this updated policy and program guidance by providing training courses that enable staff and managers to work collaboratively with partners and communities to protect river values and manage river uses. The BLM will coordinate with other programs, agencies and organizations to strengthen and improve monitoring strategies and best management practices; using partnerships, science and outreach to help monitor and manage river values.

The WSR program works to implement the AGO initiative through collaborative landscape and watershed protection and restoration work, improved recreation access and opportunities, and community partnerships that enhance quality of life outcomes for residents and visitors. The WSR program also supports the Department of the Interior's Youth in the Great Outdoors initiative. The BLM will focus on protecting and restoring rivers for people and wildlife; enhancing river recreation which supports jobs in tourism and outdoor recreation; working with communities to take action to secure economic, social and ecological benefits of having a healthy river; and working collaboratively with local, State, tribal and other Federal agencies on river protection, restoration, and recreation access.

The WSR program is funded by multiple subactivities at \$6.9 million within the MLR and O&C appropriations (see table below). Fees collected at specific recreation sites and for Special Recreation Permits are returned to those locations to support management of WSRs. The BLM also leverages base funding by matching volunteer labor and contributions; cooperating with the National Park Service (NPS), the U.S. Forest Service (USFS) and State agencies where river areas are co-managed. Donations of labor and contributed funds from river and other partnership organizations increase BLM's capability and improve outcomes. The BLM plans to align funding and performance to increase program efficiencies and transparency.

### **National Scenic and Historic Trails Program**

Congressionally designated National Scenic and Historic Trails (National Trails) are corridors of cultural heritage, resource conservation, and outstanding recreation opportunities. National Trails span thousands of miles in nearly all 50 States, crossing Federal, State, tribal, local government, and private lands. The National Trails System was established under the National Trails System Act of 1968. Program responsibilities include managing eighteen National Trails (five scenic and 13 historic) on the ground, crossing nearly 6,000 miles of BLM public lands in 14 States. The BLM serves as interagency Trail Administrator, or trail-wide lead, for the Iditarod, Old Spanish, and El Camino Real de Tierra Adentro National Historic Trails. The BLM coordinates closely with the NPS and the USFS Trail Administrators and other National Trail managing agencies to promote a seamless system of public trails. The Bureau also supports five National Trail-related visitor centers which tell the stories of the trails, fostering public enjoyment, appreciation, volunteerism, and learning, while inspiring people to get outside to experience these National Trail treasures.

The BLM safeguards the nature and purposes of National Trails, and protects the recreational, scenic, historic, natural, and cultural qualities of the areas through which the trails pass. The BLM strives to model the America's Great Outdoors initiative along these trails in its work with volunteers, nonprofit trail groups, long-term partners, and willing landowners and supports the Secretary's Youth Initiative by providing opportunities for recreation, education, and

volunteerism. National Trail work is guided by the 15-year National Conservation Lands Strategy and the 10-year National Trails Strategy.

National Scenic Trails provide outdoor recreation opportunities, public enjoyment, and promote conservation. They are planned, constructed, and maintained by the BLM and volunteers to provide visitors with long-distance hiking, backpacking, day hiking, and horseback riding opportunities, and to support related recreational activities such as camping, fishing, hunting, wildlife observation, nature study, and photography. National Scenic Trails provide public access to some of the Nation's most spectacular vistas, guide visitors through canyons, along arid deserts, across windswept tundra, and to the summit of snowcapped peaks.

National Historic Trails tell the iconic stories of America, including exploration, western expansion and settlement, economic development, cultural divides, and the pursuit of religious freedom. These pathways of history and the associated settings are identified, protected, restored, stabilized, and interpreted by the BLM and volunteers for future generations. Physical remnant and artifact discoveries include wagon ruts, swales, wagon train encampments, structures, signature rocks, pioneer grave sites, and skirmish sites, and artifacts such as period coins, weapons, household items, and tools. Public land visitors can experience National Historic Trails and the stories of the trails at visitor centers, wayside exhibits, historic sites, recreational trails, auto tour routes, and along intact trail segments. The BLM manages more miles of National Historic Trails than any other Federal agency.

Capacity-building and leveraging limited funding is critical to program success. The BLM recognizes its charge under the National Trails System Act of 1968 in encouraging and assisting nonprofit organizations, and provides limited support for training, education, workshops, conferences, publications, and youth apprenticeships. National Trails stewardship work is effected through cooperative agreements to acknowledge, support, and leverage resources. As part of this effort, approximately twenty major nonprofit trail organizations, such as the Nez Perce Trails Foundation, Oregon-California Trails Association, National Pony Express Association, and the Pacific Crest Trail Association, contribute thousands of hours working with the BLM in National Trail planning, development, operations, maintenance, and acquisition. National Trail organizations estimate that volunteer organizations contribute more than \$35.0 million in annual program value through volunteer hours and fiscal contributions.

BLM National Trail inventory and monitoring work is readily identifiable and systematic within budget and performance systems. This work is critical for the establishment of National Trail management corridors through land use planning, and in proposed project review for priority renewable and nonrenewable energy development and transmission projects.

The BLM National Trails Program is funded by multiple subactivities within the MLR appropriation (see table below). The budget proposes \$6.4 million in 2016, the same as the 2015 enacted level. Fees collected at National Trail Visitor Centers and specific recreation sites are returned to those locations. The BLM also leverages base funding by matching volunteer labor and contributions; applying for grants or other Federal or State funding; and through cooperative agreements at the local, State, and national level. The BLM plans to align funding and performance to increase program efficiencies and improve the transparency for how resources are allocated throughout the National Trails System.

### Service First

Service First is a partnership authority (P.L. 106-291, as amended by P.L. 109-54, P.L. 112-74, and further amended by P.L. 113-76) between the agencies and offices of the Department of the Interior and the agencies and offices of the Department of Agriculture. Service First authority was made permanent in the Consolidated Appropriations Act, 2012 (P.L. 112-74) and further expanded to include all agencies and offices in both the Department of the Interior and Department of Agriculture in the Consolidated Appropriations Act, 2014 (P.L. 113-76).

The BLM continues to strengthen partnerships among the NPS, the U.S. Fish and Wildlife Service (FWS), and the USFS to attain the three Service First goals of improving natural and cultural resource stewardship, enhancing customer service, and increasing operational efficiency. The four agencies provide national leadership, direction, and counsel on implementing the authorities and promoting the principles of Service First through the Service First Leadership Team (SFLT). The SFLT's goals include enhancing each agency's ability to meet its mission; increasing collective capacity to manage Federal resources on a landscape basis; overcoming institutional barriers that hinder interagency programs and initiatives; and improving constituent and customer service and resource management through streamlined processes, increased efficiencies, and use of emerging technologies.

Discussions are already underway with the legal community in both Departments about implementing the expanded authority in the new agencies. Further, both Departments and other agencies are exploring how and where to use the newly expanded authority in existing and new partnerships.

In 2016, Service First will continue to focus on opportunities for co-location of agency facilities where feasible and appropriate. Co-location better facilitates inter-agency communication and results in integration of natural resource management across the landscape. It is one method for increasing coordination across resource programs that include conserving water, hazardous fuels reduction, landscape-scale species conservation, sustaining rural communities, nurturing youth through education and connections to the outdoors, and recreation management including off-highway vehicle use and trail management.

Service First will also continue to make advances in creating an integrated information technology system where employees will be able to access other agencies' data and systems while maintaining appropriate security levels. Joint access to the more complex databases including geographic information systems, invasive weed inventories, and other natural resource data will result in more seamless customer service and improve operational efficiency for shared employees and co-located offices.

Finally, the agencies plan to build a strong interagency network with focused tools and regular outreach and information exchange such as best practices on Service First opportunities, challenges and successes.

#### **Efficient Government through Service First**

The BLM San Luis Valley Field Office is a Service First, dual-delegated unit. All line officers have both USFS and BLM management authorities and responsibilities. All units are comprised of blended staff. One unit also has a FWS Ecological Services staff member that provides technical assistance and, on some projects, is an interdisciplinary team member. The BLM and the USFS share personnel and resources with the San Luis Valley National Wildlife Refuge Complex and Great Sand Dunes National Park and Preserve.

By integrating staff, budget, and other resources, the BLM and the USFS are able to effectively save approximately 10 FTE compared to separate units. This savings is possible by adding to the capacity of one agency or the other to complete priority projects. Either agency can purchase expertise from the other; eliminating the need for each agency to have all expertise on staff. Flexibility is gained by the ability to move personnel to the agency and program where the need and funding is greatest.

#### **Engaging the Next Generation**

With the launch of the 21<sup>st</sup>-Century Conservation Service Corps (21CSC), the BLM has joined with its Federal and non-Federal partners to engage young people and veterans in working to protect, restore, and enhance America's Great Outdoors. Building on youth education and engagement programs that foster personal connections with our Nation's public lands, the BLM is engaging millennials, including veterans, in work that supports the multiple-use mission of the Bureau, helping to create the next generation of conservation leaders. Young people are employed in priority projects such as trail construction and maintenance, habitat restoration, and inventorying and monitoring in support of a wide range of program needs, including archaeological resources; wilderness characteristics; soil, water, air and climate resources; and renewable energy compliance.

The BLM's National Strategy on Education, Interpretation, and Youth Engagement envisions young people involved from an early age in learning and recreation on public lands, who then go on to become active stewards and conservation leaders as adults. The BLM's strategic focus aligns well with the four pillars of the Secretary's youth platform announced early in FY 2014. The Secretary has pledged that the Department will engage the next generation by providing opportunities to play, learn, serve, and work on public lands by:

- Creating recreational opportunities for more than 10 million young people by 2017;
- Providing educational opportunities in the natural classrooms that our public lands provide to at least 10 million K-12 students annually;

- Engaging one million volunteers in support of public lands; and
- Providing 100,000 work and training opportunities over four fiscal years, 2014 through 2017, for individuals ages 15 to 35 to support the mission of the Department.

The 2016 President's budget request includes an increase of \$5.0 million in support of the Secretary's goals for engaging the next generation. The funding will be used to enhance BLM's capability to accomplish high-priority projects in a broad range of resource programs and promote quality participant experiences and pathways to careers. Expanding and enhancing partnerships will be critical to success.

The BLM will continue to partner with youth corps organizations, with a special emphasis on those organizations that meet the needs of underserved youth, including those from Tribes and rural communities. In 2016, the BLM will also continue to identify science and resource priorities that can be addressed through short- or long-term projects involving the 21 CSC and other youth corps and veteran's crews, as well as volunteers, field schools, and interns. Scaling up a citizen science program involving youth and volunteers will be a key focus of efforts in 2016.

In 2016, the BLM will also focus on identifying mission-critical jobs and skills that are needed for entry-level positions in those occupations. This includes continued expansion of a resource assistant internship program based on the DOI's Direct Hire Authority and focused on mission-critical jobs. In addition, by expanding partnerships with universities and professional organizations, the Bureau will enable more young people to explore careers in Science, Technology, Engineering, and Mathematics (STEM). Opportunities to pursue field-based investigations and experiences, such as those provided to college interns and to K-12 students involved in the BLM Hands on the Land network of outdoor classrooms, can nurture and sustain student interest in pursuing STEM degrees and careers.

The BLM will also support the DOI/VISTA volunteers who have been engaged in several States to serve impoverished communities with programs that engage youth in outdoor educational experiences and STEM education, foster economic opportunities in conservation and land management, and promote healthy futures for underserved populations.

### **Education**

The BLM's National Strategy for Education, Interpretation, and Youth Engagement envisions an education program that enhances public environmental and heritage literacy and its understanding of land management issues. The strategy focuses on identifying priority themes, working with partners to assist in the development and delivery of programs, and identifying and using relevant national and State education standards and best practices to further improve the education programs and products that the BLM produces.

In 2016, the BLM will expand competency training for all staff, volunteers, and education partners who deliver educational programming and identify staff who should meet the established criteria. Program staff will continue to develop educational tools and resources identified in the 2014 needs assessment and will initiate a process to evaluate the effectiveness of education products, programs, and partners according to relevant standards, using results to guide improvements.

The BLM offers a range of education programs for youth and adults, including the following signature programs:

- ***Hands on the Land:*** Through the national HOL network of outdoor classrooms, the BLM's 73 HOL sites collaborate with local schools and communities to educate more than 60,000 students on the public lands each year. Launched in 2013, the HOL Teachers on the Public Lands program, which engages classroom teachers as summer interns in BLM offices, will further ensure even stronger connections with schools and standards-based classroom curriculum. Field-based educational programming at HOL sites fosters connections to nature, exposes students to issues confronting 21st-century land managers, and creates broad-based community support for the BLM to address the Department's STEM Education and Employment Pathways Strategic Plan and other Interior Department and national youth initiatives. In order to achieve the BLM's goal of 108 HOL sites by 2017, the BLM will in 2016 continue to expand the number of sites involved in the HOL program, as well as the number of Teachers on the Public Lands.
- ***Project Archaeology:*** Project Archaeology, the BLM's primary heritage education program, serves approximately 1,000 educators each year (totaling more than 12,000 since the inception of the program) through professional development for classroom teachers and informal educators, and through high-quality curricular materials. These educators reach an estimated 250,000 learners per year with high-quality cultural resource materials and programs. In addition to hosting professional development workshops for teachers, BLM field offices incorporate Project Archaeology materials into programs such as HOL and into materials and programs for local schools and the general public.
- ***Take It Outside!*** Opportunities for young people and families to get outdoors and informally learn about the public lands are offered through Take It Outside! activities and partnerships with over 300 organizations annually, including the Boy Scouts of America and Girl Scouts of the USA. Annually, Take It Outside! reaches over 70,000 youth and families through more than 200 different types of activities on BLM lands, including overnight and day camps; National Public Lands Day projects; and recreational outings such as fishing, hiking, and paleontology explorations.
- ***Stewardship:*** For over 20 years, the BLM has partnered with the Leave No Trace Center for Outdoor Ethics and Tread Lightly!, Inc., to teach BLM staff and visitors how to behave responsibly on public lands through outdoor ethics education. Outdoor ethics education, training, and materials help the public learn to take care of the lands they visit and foster a sense of stewardship for public lands. BLM visitors also learn outdoor ethics through Take It Outside! activities, educational signs, printed materials, and informal training.
- ***Public Education Opportunities:*** Field trips, classroom visits by resource professionals, and service learning opportunities not only educate but also foster conservation and stewardship ethics. Additionally, BLM lands provide a rich opportunity for collegiate-level research, professional development opportunities for teachers and continuing education for seniors.

The BLM's increased use of technology helps the agency reach a broad array of audiences to enhance public understanding, achieve management goals, foster stewardship, and build public support. BLM offices also use social media, web, and mobile technologies to provide educational programs, information, and materials to an ever-expanding virtual audience.

### Interpretation

Serving audiences with diverse backgrounds, viewpoints, and needs, BLM interpretive programs and services connect public land visitors to BLM's natural and cultural resources, enhance understanding of resource management issues, add to the quality of visitor experiences, and build public interest in conserving and protecting America's public lands.

In 2016, the Interpretation Program as outlined in the BLM Education, Interpretation and Youth Engagement National Strategy will focus on interpretive partnerships to help contribute to a skilled workforce. The program will identify local, regional, and national level partner resources that provide interpretive training for staff, interns, and volunteers. The program will develop training, tools, and how-to guidance to establish working relationships with diverse constituencies to assist BLM sites in developing and delivering interpretive programming. The program will develop and distribute resources for self-assessment and continuous improvement of interpretive programs and products, ensuring that the public receives a quality product.

**Junior Explorers:** The BLM's Junior Explorer program was formally launched in 2013 with the goal of encouraging awareness of the BLM and public land stewardship, and informally educating children about the natural and social sciences. The BLM Junior Explorer program provides an avenue for BLM district and field offices to develop and provide engaging, high-quality educational materials and activities to elementary-age children, as well as their parents and teachers.

**Artist in Residence:** The BLM's Artist in Residence (AIR) program began in 2011. AIR participants are encouraged to use their skills to depict the variety of cultural and natural resources on BLM lands, including historic structures, artifacts, cultural landscapes, geologic features, and plant and animal life. These artists "translate" the resources--the heart of BLM's mission--into images, objects, and performances that bring others enjoyment and a deeper understanding of the public lands.

### Volunteers

The BLM Volunteer Program engages thousands of citizens nationwide each year and provides a return of over 26:1 on agency funds invested in program management, which includes volunteer recruitment, training, and recognition, as well as staff training and fulfillment of legal requirements, such as volunteer background checks.

Volunteer contributions to the BLM are highly valued and vitally important to achieving agency goals. In 2014, volunteers contributed over 1.8 million hours to BLM lands and resources, including national monuments and national conservation areas, recreation areas and trails, wild and scenic rivers, rangelands, cultural resources, and wild horses and burros. Among the programs and projects completed were:

- **National Public Lands Day:** National Public Lands Day (NPLD) is the Nation's largest volunteer workday on behalf of the public lands and a contributor to the America's Great Outdoors, Let's Move, and Take It Outside! initiatives. In 2014 alone, the 21<sup>st</sup> celebration of this annual service day, the BLM coordinated 247 projects at 133 BLM sites hosted by 88 field offices in 16 States; and 8,500-9,000 volunteers participated in a variety of enhancement and restoration activities. Those volunteers produced public lands enhancements valued at more than \$1 million, representing an annual return on investment of 5:1 or greater.

In 2016, the BLM will focus on scaling up citizen science initiatives, rolling out new national policy to guide the agency's volunteer programming, and expanding the slate of available volunteer administration training programs in order to both strengthen the skill sets of agency volunteer coordinators and staff working with volunteers and increase the capacity of long-term, highly-skilled volunteers.

### Partnerships

In 2016, the BLM will further bolster its capacity to support partnerships to continually improve the management, stewardship, and public enjoyment of the Nation's public lands. To achieve these objectives, the BLM will continue implementing its national partnerships strategy, which provides a framework to support and coordinate the use of partnerships across the BLM. Areas of focus include staffing and training, guidance and tools, practitioner networks, and data collection and reporting. The strategy and implementation plan build on the BLM's successful partnership history and will help advance and strengthen partnerships across BLM programs.

Successful and diverse partnerships across the BLM address agency and Department priorities. Some recent examples include:

- The **Phoenix District Youth Initiative** (Arizona) is a model youth engagement partnership that encourages urban and Native American youth involvement in natural resource careers. The partnership delivers hands-on certification, environmental education, and employment programs on public lands; natural resource course and degree offerings; and tribal internships. Youth gain valuable work experience monitoring riparian habitats, removing invasive plants, performing stewardship and conservation projects, and participating in field-based science programs. Their work fosters sustainable youth engagement in the stewardship of America's natural and cultural heritage.
- The **Wyoming Landscape Conservation Initiative** (Wyoming) initiative was launched by a coalition of State of Wyoming and Federal agencies as a long-term, science-based effort to assess, monitor, and enhance aquatic and terrestrial habitats on a landscape-scale in southwestern Wyoming. The partnership leverages the resources of multiple partners to build a shared vision for this 19 million-acre area, balancing open spaces, abundant wildlife, traditional agriculture, and production of energy, non-energy, and other resources. The initiative also facilitates responsible development through local collaboration and partnerships.
- The **University of Nevada Cooperative Extension-Bootstraps Program** (Nevada) engages, trains, and employs young, at-risk adults in priority conservation work on

central Nevada's public lands. Training is focused on developing a variety of life skills, including peer relations, problem solving, and natural resource topics such as rangeland ecology, wildlife biology, plant identification, and the concepts of multiple-use and sustainability. More than 100 Native American and other underserved youth hired under the program have applied their training to enhance habitat for greater sage grouse and other important wildlife by controlling more than 12,000 acres of encroaching pinyon-juniper.

## Landscape Approach to Managing the Public Lands

The 2016 budget request includes efforts to enhance the BLM's capacity to effectively use regional information to manage the public lands across large landscapes, and achieve conservation and development priorities in the face of compounding stressors such as prolonged drought, catastrophic wildland fire, invasive species and urban growth.

Over the last ten years, the BLM has developed a number of tools to help manage the public lands on a landscape basis. These tools include creating the capacity to systematically synthesize large amounts of geospatial information to help the BLM and its partners develop a shared understanding of regional trends and regional conservation and development opportunities; working with public land users to institutionalize the "mitigation hierarchy" to help achieve conservation and development goals; developing regional partnerships to coordinate and focus multiple funding streams to help achieve regional conservation goals; and identifying core indicators, standard methods and multi-scale sampling frameworks to monitor changes in terrestrial and aquatic condition across a region.

The BLM is incorporating these tools into a number of major initiatives including the California Desert Renewable Energy Conservation Plan (DRECP), the Greater Sage-Grouse planning initiative, implementation of the Western Solar Energy Plan, and the implementation of the plan for the National Petroleum Reserve – Alaska (NPPRA).

In 2016, the BLM will build on these successes by moving forward with a landscape approach to planning and development of corporate geospatial data solutions.

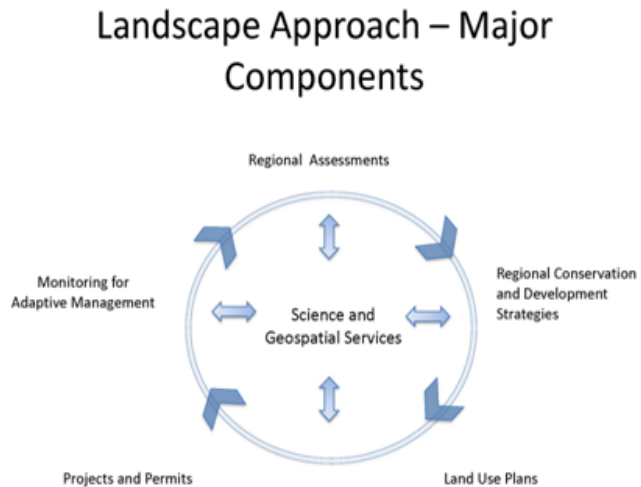

### The Landscape Approach:

In 2016, the BLM will move forward with the implementation of a number of major Executive and Secretarial orders including:

- Secretarial Order 3289: Addressing the Impacts of Climate Change (September 2009) which establishes DOI's Energy and Climate Change Task Force and Climate Change Working Group.
- Executive Order 13514: Federal Leadership in Environmental, Energy and Economic Performance (October 2009) which directs agencies to reduce GHG emissions and support the development of renewable energy.
- Executive Order 13604: Improving Performance of Federal Permitting and Review of Infrastructure Projects (March 2012) which directs agencies to significantly reduce the aggregate time required to make decisions in the permitting and review of infrastructure projects and improve environmental and community outcomes.
- The President's Climate Action Plan (June 2013) which outlines executive actions to cut carbon pollution in America; prepare the United States for the impacts of climate change, and lead international efforts to combat global climate change and prepare for its impacts.
- Executive Order 13653: Preparing the United States for the Impacts of Climate Change (November 2013) which directs Federal agencies to help improve climate preparedness and resilience through deliberate preparation, close cooperation, and coordinated planning.
- Secretarial Order No. 3330: Improving Mitigation Policies and Practices of the Department of the Interior (October 2013) which promotes a landscape-scale approach to identify and facilitate investments in key regional conservation priorities.
- The President's Priority Agenda for Enhancing the Climate Resilience of America's Natural Resources (October 2014) which identifies strategies to: foster climate-resilient lands and waters; manage and enhance US carbon sinks; enhance community preparedness and resilience by utilizing and sustaining natural resources; and modernize Federal programs, investment, and delivery of services to build resilience and enhance sequestration of biological carbon.

Working with Federal, State, tribal and non-governmental partners, the BLM will use broad ecological assessments to better understand resource conditions and trends and to identify opportunities for resource conservation and development. As shown on the diagram to the right, the landscape approach to managing the Nation's public lands consists of several interconnected actions, including regional assessments, regional conservation and development strategies, land use plans, projects and permits, monitoring for adaptive management, science integration, and geospatial services. Taken together, these components will enable the BLM

and its partners to more effectively evaluate and address conservation and development needs across programmatic, organizational and administrative boundaries.

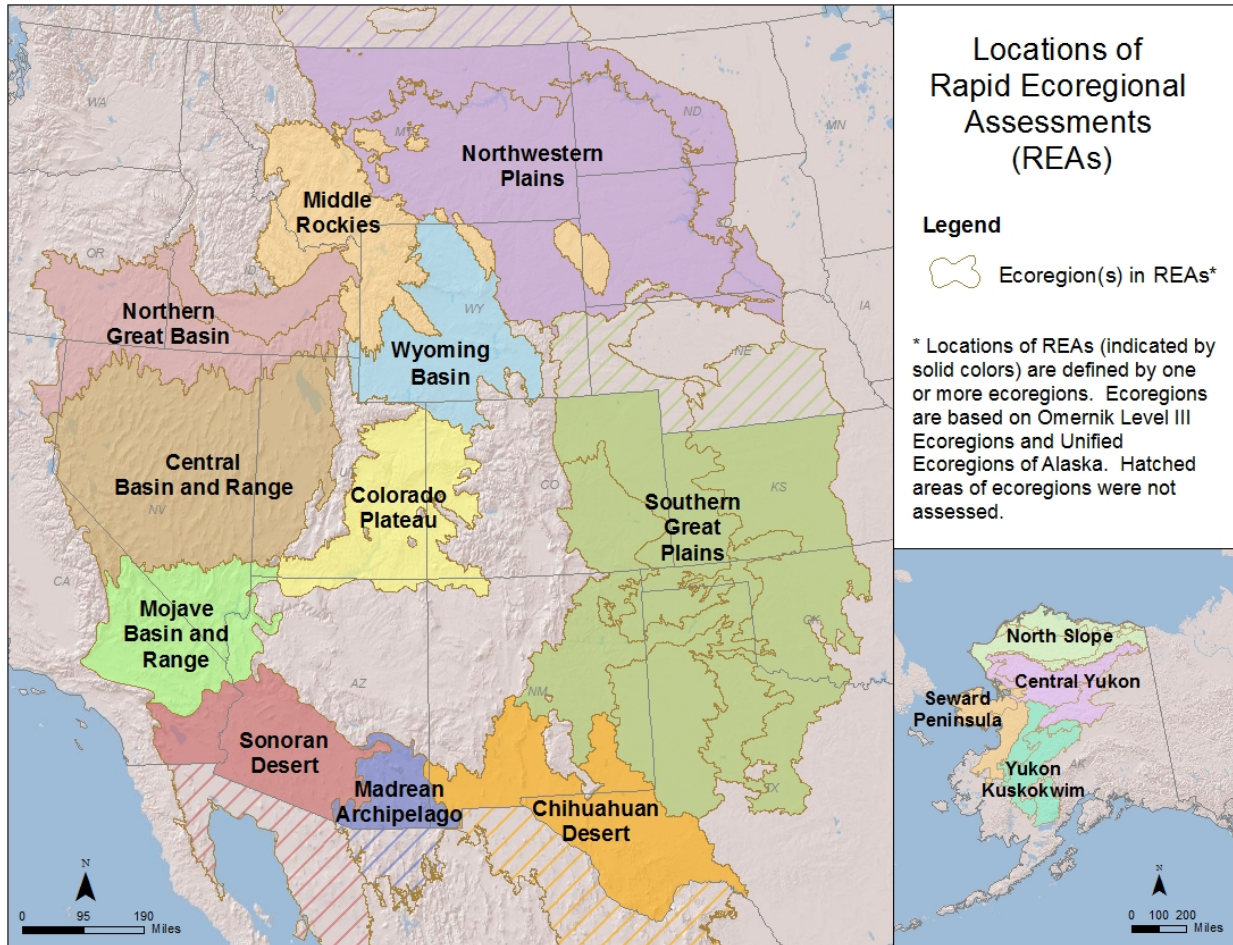

The landscape approach to public land management is a multi-year investment. The BLM anticipates that it will take several years to implement this multi-scale approach to management in each ecoregion. The first two to three years focuses on conducting REAs. In these assessments, the BLM and its partners: identify management questions; develop conceptual models; evaluate significant ecological values such as native fish, wildlife, and plants; evaluate terrestrial condition and aquatic condition; and identify four potential change agents (climate change, fire, invasive plants and animals, and urban and industrial development). In the third and fourth year, efforts to develop Regional Conservation and Development strategies are kicked-off. To provide a solid understanding of the components of REAs and the data, scientific approaches, modeling tools, and results for each ecoregion, the BLM is offering hands-on workshops and on-line content delivery, such as YouTube videos, to staff, partners, and the public that will increase our ability to utilize the vast amount of data and information in the REAs to enhance decision making. The next three to ten years are devoted to implementing planned actions, effectiveness monitoring, and data analysis and review for adaptive management.

**Regional Assessments:** The BLM released seven Rapid Ecoregional Assessments (REAs) in 2013-2014 and is planning to release seven additional REAs in 2015, and one in 2016. Taken together, these 15 REAs cover over 700 million acres of public and non-public lands. The REAs are peer-reviewed science products that synthesize existing information (including a significant amount of non-BLM data) about resource conditions and trends. They highlight and map areas of high ecological value; gauge potential risks from stressors including climate change; and establish landscape-scale baseline ecological data to gauge the effect and effectiveness of future management actions. The REAs provide the BLM with a large amount of information about current and projected resource condition, which the Bureau can then use along with similar information from other large-scale assessments to help identify potential development and conservation priorities; prepare land use plans and plan amendments; conduct cumulative impact analyses; develop best management practices; and authorize public land uses. The REAs and other sources for regional information, such as the Western Governors Association's Crucial Habitat Assessment Tool, are foundational to the landscape management approach.

To help address the President’s priority to manage and enhance US carbon sinks, the BLM will work with the USGS and the other natural resource management agencies to develop a U.S. government approach to managing land carbon. This will include completing baseline assessments of ecosystem carbon sequestration and greenhouse gas fluxes and conducting studies to better understand how land management practices affect carbon stocks.

**Map of Rapid Ecoregional Assessments and Landscape Conservation Cooperatives**

*The BLM initiated seven REAs in 2010, two assessments in 2011, and six more in 2012. The BLM published seven completed REAs in 2013-2014 and is planning to publish seven more REAs in 2015 and one in 2016. The BLM is coordinating with other agencies and partners to keep the REAs updated and fresh.*

Additionally, the BLM will continue work with partners to understand the interaction of changes in climate with the major habitat types that sustain the ecological and economic health of our Nation. The spatial analysis will identify spatial and temporal trends of climate change that has already occurred across the western U.S. landscapes.

Regional Conservation and Development Strategies are critical bridges between ecoregional assessments and land use planning and other decision making processes. The BLM is working

with partners to inventory and compile existing assessments and cross-walk the priority areas identified in each assessment.

In 2014 and 2015, the BLM began work with a number of Landscape Conservation Cooperatives (LCCs) and other regional partnerships to develop synthesis reports covering all or significant portions of six ecoregions: the Northwestern Plains, the Central Basin and Range, the Mojave Basin and Range, the Sonoran Desert, the Madrean Archipelago, and the Chihuahuan Desert. These synthesis reports will help develop a shared understanding of the conservation and development opportunities highlighted by the REAs and other large-scale assessments; identify what the BLM and its partners are already doing to address regional challenges and opportunities; and outline additional actions that could be undertaken over the next five to ten years to help achieve regional goals. These regional strategies will significantly help the BLM implement the recent Secretarial Order on Improving Mitigation Policies and Practices. Because the REA information will be applied to many different types of management concerns, it is likely that more than one ecoregional strategy will be developed in each ecoregion. In 2016, the BLM will continue work with the LCCs as well as the Climate Science Centers and other regional partnerships, to complete ongoing regional strategies and begin others for REAs completed in 2015.

In 2015, the BLM will identify regional priority focal areas for 2016-2020 project funding. This will set the stage for better alignment of restoration investments. The identification of these focal areas also will strengthen the BLM's landscape approach to stewardship activities and will directly benefit project level implementation.

Land Use Plans: While these regional strategies are being developed, BLM field offices will incorporate assessment information into ongoing planning and other resource management activities. For example, data from completed REAs is being used to inform the multi-State Greater Sage-Grouse planning initiative, to develop a regional mitigation plan for the Dry Lake Solar Energy Zone in Nevada, and to identify where National Conservation Lands units are important for resource protection and conservation within a broader landscape context. The BLM Division of Decision Support, Planning, and NEPA has provided guidance on the use of REAs and other large-scale assessments for planning purposes, and is developing an efficient and adaptive approach to landscape level land use planning in which plans are more responsive to changing ecological systems over political and jurisdictional boundaries. This effort, referred to as Planning 2.0, facilitates the ability to effectively conduct land use planning across landscapes. Planning 2.0 will focus the planning process on collaborative work with partners at different scales to produce highly useful decisions that readily address the rapidly changing environment and conditions posed by the changing climate, rapid growth and development and other ecological stressors.

Projects and Permits: Field implementation puts the management strategies into practice through existing BLM programs, including the public participation and intergovernmental coordination opportunities associated with implementation planning and environmental impact assessment procedures. Examples of field implementation include authorizing land use, constructing facilities, and implementing on-the-ground treatments and projects. As a matter of policy, the BLM is committed to using the "mitigation hierarchy" to help site and design new developmental projects and focus off-site mitigation in areas with high value and high probability of success.

Healthy Landscapes (HL) is a critical effort to integrate and focus on-the-ground restoration projects. The HL effort helps target project dollars from multiple BLM programs, partners

contributions, and compensatory mitigation to fund conservation and restoration work in identified, cross-jurisdictional, priority areas. For example, HL funds may be combined or coordinated with other funds to complete a portfolio of projects in one focus area, such as vegetation treatments, travel management planning, Land and Water Conservation Fund acquisitions, and applied regional mitigation funds, when each project contributes to the objective of conserving intact habitat or defragmenting habitat. Coordinating and focusing integrated resource stewardship investments can help to generate added value, over and above what individual programs or mitigation funds could accomplish. Since its inception in 2007, HL has supported more than 1.7 million acres of treatments in New Mexico through the Restore New Mexico program; more than 1 million acres of treatments in Utah in partnership with the Utah Watershed Initiative; and hundreds of thousands of acres of restoration projects through such partnerships as the Wyoming Landscape Conservation Initiative, the Great Basin Restoration Initiative and many lesser known projects coordinated at District Office levels. Although exact rates vary project to project, the BLM's HL funds are typically leveraged by at least a 3:1 ratio. The BLM has developed a proposal to address the reforestation/afforestation backlog on the public lands. When implemented, it will enhance carbon sequestration on western BLM lands.

Monitoring for Adaptive Management: Informed decision making and adaptive management require current data about the status and trend of terrestrial and aquatic systems, about the location and extent of natural and human-caused disturbances, and about the location and effectiveness of land treatments. The BLM's Assessment, Inventory, and Monitoring (AIM) Strategy is the framework for this data collection, and the 2016 President's budget request includes an increase of \$5.0 million for this work within the Resource Management Planning, Assessment and Monitoring subactivity. This strategy outlines a process for using core indicators, standardized field methods, remote sensing, and a statistically valid study design to provide nationally consistent and scientifically defensible information to determine the status of and track changes to natural resources on the public lands over time. The AIM Strategy is currently being implemented through five sets of interrelated projects. The first three are designed to implement West-wide monitoring that is coordinated, and where possible, integrated with the monitoring activities of other Federal, State and non-governmental partners. The West-wide projects include the BLM Rangeland Assessment, the BLM Western Rivers and Streams Assessment, and the BLM Grass-Shrub Fractional Mapping Project. Some of the Federal partners' included in these efforts are National Resource Conservation Service, Environmental Protection Agency, United States Geological Service, and United States Forest Service. The two remaining projects are designed to help support immediate multi-State and field office priorities. These projects include efforts to monitor the effectiveness of BLM land use plans and to determine the effectiveness of BLM treatments and actions. In 2016, these five interrelated monitoring efforts will be implemented to inform the regional mitigation and monitoring strategies for the Solar Programmatic EIS and for the Greater Sage-Grouse Planning Initiative.

Climate Resilience: Among the most significant challenges of the changing climate is a projected increase in the frequency and intensity of extreme weather events - including severe storms, wildfire and drought. In 2016, the Department proposes investments to increase the resilience of both coastal and inland communities to the impacts of these events. These investments will focus on areas at high risk to climate challenges to address vulnerabilities to extreme events in these geographies in partnership with State, local, and tribal governments and other stakeholders. Given this challenge, the 2016 request for BLM proposes the following investments in support of this effort:

- The BLM will coordinate with the USFS and the USGS to conduct assessments to help understand the impact of management practices on carbon sequestration on the public lands. Soil carbon storage is an important function of terrestrial ecosystems. Understanding what maintains the soil carbon pool is important to quantify, as well as to determine how it will respond to environmental change.
- The BLM will continue support for the seed and plant materials program to acquire, develop, and distribute genetically appropriate and locally adapted materials for restoration, including post fire stabilization and rehabilitation.
- The BLM will work with USGS, USFS, FWS, NPS, Bureau Indian Affairs, and numerous non-federal partners, including academic institutions, to reduce the impacts of drought, range land fire and invasive species on the productivity and resiliency of the public lands. The BLM will work to better understand how to establish big sagebrush, and ultimately sage-grouse habitat across the range.

The 2016 budget for BLM includes an increase of \$10.0 million in the Challenge Cost Share program for leveraged partnership projects to address community resiliency. The Challenge Cost Share program is a 50:50 non-Federal partner matching program which supports mutually beneficial public and partner projects. The funding would support work with non-Federal partners on projects that increase the resilience of landscapes to extreme weather events with a focus on the inland challenges of wildfire, flooding and drought.

Projects funded through the Challenge Cost Share program will improve community resilience at the project site and provide new and needed data to communities around the Nation on what natural infrastructure designs and solutions contribute to resilience.

To accomplish this effectively, the Department will draw on scientific expertise to identify ecosystem restoration and enhancement strategies likely to successfully build resilience to fire, flooding and drought. Efforts might also identify focal areas where these strategies are likely to have a significant return on investment by protecting communities and at-risk infrastructure as well as improving landscape resilience in areas of strategic importance to the Department. As part of this initiative, the Department will develop project criteria and evaluation metrics relevant to these new project types. Modeled on the Department's approach to implementing Hurricane Sandy resilience investments, the Department would request proposals and conduct a coordinated evaluation of projects.

### 2016 Collections

In 2016, the Bureau of Land Management (BLM) will collect an estimated total of \$681.5 million in revenue. Revenue is collected by the BLM from sources such as the sale of land and materials, grazing fees, timber sales, recreation use fees, and various filing fees. These collections assist State and local governments, support all programs funded from the General Fund of the U.S. Treasury, and offset charges for program operations where certain fees collected can be retained by the BLM.

In addition, the Office of the Natural Resources Revenue (ONRR) will collect an estimated \$3.9 billion in receipts from BLM's onshore mineral leasing activities (bonuses, rents, and royalties). Because ONRR collects them, these mineral leasing receipts are reflected in the ONRR budget materials (within the Office of the Secretary Budget Justification).

The amount of revenue expected to come from some sources varies for the reasons described below.

**Sales of Public Land** – This category includes receipts from the sale of public land, including land sales in Clark County, Nevada. Excluded from this collection source are the sales of timber and vegetative materials from the public domain land, sale of land and timber and vegetative materials from the Oregon & California Grant Lands and Coos Bay Wagon Road

Lands, sale of land from Land Utilization project lands, sale of land and materials from reclaimed lands (reserved or withdrawn), and sale of town sites and reclamation projects.

The main sources of collections in the Sale of Public Land category are described below. The collection amounts described here represent 100 percent of the funds collected. In many cases, portions of the funds collected are distributed to State governments, to the U.S. Treasury, or other entities, before the remaining portion is distributed to the BLM. The Management of Lands and Resources, Permanent Operating Funds, Miscellaneous Permanent Payments, and Miscellaneous Trust Funds chapters describe the portions allocated to the BLM and how the BLM uses the funds.

- ***Southern Nevada Public Land Management Act (SNPLMA) Sales Proceeds*** –SNPLMA, as amended, provides a process for orderly sale of certain public lands in Clark County, Nevada, near the city of Las Vegas. Approximately 50,000 acres of public land are within the disposal boundary area. The BLM has conducted land sales for 15 years under the authority of this statute. Collections in 2013 and 2014 were \$12,963,000 and \$61,430,000 respectively. Sales in 2015 are projected to produce \$97,058,000. The increase is due to an increase in estimates of acres sold offsetting a lower price per acre. Estimated collections for 2016 are expected to be \$125,347,000 mainly coming from final payments received from 2015 sales and a planned fall auction of 600 acres. Collections are reported when payments are received regardless of when sales are held and the estimates make allowance for the normal lag of 180 days between sales and collections. For more information see SNPLMA, P.L. 105-263, as amended by P.L. 107-282.
- ***Southern Nevada Public Land Management and Lincoln County – Earnings on Investments*** – SNPLMA authorizes the Secretary to manage the collections account for the purposes set out above, and is also authorized to use interest generated from the above-mentioned funds. The BLM is authorized to invest the unspent balance of collections from SNPLMA and Lincoln County Lands Act land sale receipts. Earnings on investments for 2013 and 2014 were \$997,000 and \$369,000 respectively. Interest estimated to be earned in 2015 and 2016 is \$1,110,000 and \$5,900,000 respectively. Projected investment earnings take into account revenue from land sales, earnings on investments, and projected interest rates and outlays.
- ***Federal Land Transaction Facilitation Act (FLTFA)*** – No receipts were collected from the sale of land under FLTFA, Title II of P.L. 106-248 in 2013 or 2014 because the authority expired in July 2011; the unobligated balance was transferred to the Land and Water Conservation Fund as required by law. The 2016 Budget includes a proposal to reauthorize FLTFA and allow lands identified as suitable for disposal in current land use plans to be sold using the FLTFA authority. FLTFA sales revenues would continue to be used to fund the acquisition of environmentally-sensitive lands and the administrative costs associated with conducting sales. Estimated collections for 2016 are \$5,000,000. The Permanent Operating Funds section provides more information on the proposal. Four percent of FLTFA collections are paid to the State in which the land is sold.
- ***Lincoln County Land Sales*** – Revenue in the amount of \$1,014,000 was collected in 2014 from land sales under the Lincoln County Land Sales Act, P.L. 106-298, as amended. Receipts, mainly from Coyote Springs sales, are estimated to be \$2,968,000 and \$560,000 in 2015 and 2016, of which five percent and ten percent will be paid to the State and County.

- **Owyhee Land Acquisition Account** – Revenue collected prior to the enactment of the Omnibus Public Land Management Act of 2009 in the amount of \$2,451,000 was deposited to this account in 2010. No revenue was collected in the account since then, and none is estimated to be collected in 2015; but sales in 2016 are estimated to produce \$800,000. Four percent of those amounts are paid to the State.
- **Washington County, Utah Land Acquisition Account** – No revenue was or is estimated to be collected in 2014 or 2015 from the sale land under the Washington County, Utah Acquisition Account, P.L. 111-11, (Section 1978). Estimated collections in 2016 are \$823,000.
- **Silver Saddle Endowment Account** – No revenue was collected or is estimated to be collected in 2014 and in 2015 from the sale land under the Silver Saddle Endowment Account, P.L. 111-11, (Section 2601). Estimated collections in 2016 are \$55,000. Four percent of collections will be paid to the State.
- **Carson City Special Account** – No revenue was collected from 2012 through 2014 from the sale of land under the Carson City Special Account, P.L. 111-11, (Section 2601). None is estimated to be collected in 2015 and 2016.

**Miscellaneous Filing Fees** – Collections in this category are primarily from fees received for filing or recording documents; charges for registration of individuals, firms, or products; and requests for approval of transfer of leases or permits under statutory authorities that do not permit the BLM to retain and spend those collections.

**Mineral Leasing-National Grasslands** – The Office of Natural Resources Revenue, formerly a component of the Minerals Management Service, is responsible for the collection and distribution of most mineral leasing receipts; however, the BLM administers and collects rentals from oil and gas pipeline rights-of-way associated with lands leased under the *Mineral Leasing Act* and the *Mineral Leasing Act for Acquired Lands*. Also, the BLM pays 25 percent of mineral leasing collections on acquired lands to counties where the collections were generated. The BLM continues to collect first-year rentals and initial bonuses from mineral leasing but transfers these receipts to ONRR accounts.

**Grazing Fees from Public Lands and Land Utilization Project Lands** – This category includes all grazing fees collected from public lands and Land Utilization Project lands administered by the BLM. It also includes mineral leasing and other receipts from Land Utilization Project lands. Grazing fees are collected under the authority of the *Taylor Grazing Act*, *Federal Land Policy and Management Act*, and the *Public Rangelands Improvement Act of 1978*. For more information on the use of these fees see the Range Improvements section.

**Timber and Vegetative Material Sales –**

- Receipts from the Oregon and California (O&C) and Coos Bay Wagon Road Grant (CBWR) Lands – In 2014, the BLM collected \$42,497,000, mostly from timber receipts from Oregon and California and Coos Bay Wagon Road lands.
- Authority for Secure Rural Schools and Community Self-Determination Act payments has expired. (Payments were made in part from O&C and CBWR receipts and in part from the General Fund.) The 2016 Budget proposes a five-year reauthorization of the Secure Rural Schools Act with funding through mandatory U.S. Forest Service (USFS) appropriations. The USFS will make the Secure Rural Schools (SRS) payments to western Oregon counties. This SRS proposal revises the allocation split between the three portions of the program from the current authority emphasizing enhancement of forest ecosystems, restoration and improvement of land health and water quality and the increase of economic activity. (Please refer to the Miscellaneous Permanent Payments section for more information about the SRS and the USFS budget for more information on the reauthorization proposal.)
- **Timber Receipts from the Public Domain Forest Lands** – In 2016, the BLM expects to offer for sale 25 million board feet of timber products from public domain lands, and estimates collections of \$1,325,000 in timber sales receipts from public domain lands. Collections in 2013 and 2014 were \$3,147,000 and \$1,920,000 respectively, and the estimates for 2015 and 2016 are \$2,025,000 and \$1,325,000. Collections from salvage timber sale on public domain lands were \$1,794,000 in 2013 and \$1,270,000 in 2014. Estimates are \$1,500,000 in 2014 and \$1,000,000 in 2015.
- **Stewardship Contracting Fund** – With stewardship contracting, the BLM may apply the value of timber or other forest products removed as an offset against the cost of services received, and monies from a contract under subsection (a) may be retained by the USFS and the BLM. These monies are available for expenditure without further appropriation at the project site from which the monies are collected or at another project site. In 2013 and 2014, the BLM deposited \$46,000 and \$175,000 to this fund. The authority expired on September 30, 2013, but was extended by the Agriculture Act of 2014, Public Law No: 113-79. The BLM estimates deposits will be \$20,000 in 2015 and 2016.

**Recreation Use Fees** – Recreation use fees are derived from collecting fees on public lands at recreation sites, issuing recreation use permits, and selling Federal recreation passports such as the Golden Eagle and Golden Age passes. These funds are used to improve recreation facility conditions and user services at recreation sites where the fees were generated. In 2013, and 2014 recreation fee collections were \$17,856,000 and \$17,673,000. The BLM anticipates collecting \$19,653,000 in 2015 and \$19,183,000 in 2016 under its recreation fee collection authorities. The use of recreation fee collections is described in the Permanent Operating Funds section. Under current law, authority for these collections expires in December, 2015. The 2016 Budget proposes to permanently extend the authority to collect and spend these fees.

**Naval Oil Shale Reserve** – On August 7, 2008, the Secretaries of the Interior and Energy certified that sufficient funds have been collected to cover the cost of the cleanup and of equipment installed on the oil shale reserve. Because of the certification, no more deposits will be made to the Naval Oil Shale Reserve Fund. Instead, revenue from the site will be distributed under the Mineral Leasing Act. The unappropriated account balance is \$76,665,506 which will not change unless new legislation is enacted.

**Sales of Helium** – The Helium Privatization Act of 1996 required the Secretary to offer for sale a portion of the Conservation Helium stored underground at the Cliffside Field north of Amarillo, Texas. Revenue from sales in 2013 was \$203,002,000. That amount was sufficient to pay the remaining debt owed to the Treasury, and the authority for the Helium Revolving Fund expired after that payment was made. Authority for the helium program was reauthorized by the Helium Stewardship Act of 2013, P.L. 113-40. Collections from annual sales were \$242,111,000 in 2014 and are projected to be \$132,575,000 and \$148,751,000 in 2016. Revenues in excess of the cost of operating the helium program will be deposited to the General Fund. Additional information is available in the helium program section.

**Mining Claim-Related Fees** – Authority to collect these fees was initially enacted in the *Department of the Interior and Related Agencies Appropriations Act for 1989* which provided that fees established by the Secretary of the Interior for processing actions relating to the administration of the General Mining Laws shall be immediately available to BLM for Mining Law Administration program operations.

The *Omnibus Budget Reconciliation Act of 1993, P.L. 103-66, (Section 10101)* provided for the annual \$100 per claim maintenance fee for unpatented mining claims and sites to continue through 1998. The authority has been modified and extended by Interior appropriations acts. The law allows a waiver from the fee for those claimants who hold 10 or fewer claims. The authority also established a \$25.00 per claim location fee for new claims, to be paid at the time of recordation. The law requires that the fee be adjusted for inflation. The maintenance fee is currently \$155.00 per claim and the location fee is currently \$37.00 per claim. Collections in 2013 and 2014 were \$65,787,000 and \$57,437,000. They are estimated to be \$57,154,000 in 2015 and \$57,952,000 in 2016. Additional information is included in the Activity: Mining Law Administration section.

A \$20.00 processing fee is required for new mining claim locations in addition to the initial maintenance fee and location fee. BLM collects this fee under its cost recovery regulations (see 43 CFR 3000.12). These fees are accounted for separately from the maintenance and location fees and therefore are not included in the above total. Additional information is included in the Activity: Mining Law Administration section.

**Service Charges, Deposits, and Forfeitures** – These receipts include revenue from providing special program services, such as rights-of-way application processing fees; wild horse and burro adoption fees; fees charged to timber sale purchasers when the BLM performs work required by the contract; reimbursement to the government for damage to lands and resources; collections for processing disclaimers of interest applications; and photocopying fees. The collection and retention of each of these receipts are authorized through legislation. Collections in 2014 were \$29,998,000 and are estimated to be \$32,465,000 in 2015 and \$31,050,000 in 2016. Additional information is included in the Service Charges, Deposits and Forfeitures section.

**Application for Permit to Drill Fees** – For several years, the annual Interior, Environment, and Related Agencies Appropriations Act authorized the BLM to collect a fee when an application for a permit to drill for oil and natural gas is submitted. The current fee is \$6,500 per application. In 2014 and 2015 up to \$32,500,000 from those collections are to be credited to the Management of Lands and Resources appropriation. Collections in excess of that amount are deposited to the General Fund. Collections were \$30,946,000 in 2013 and \$35,413,000 in 2014. The National Defense Authorization Act, P.L. 113-291 requires in 2016 and beyond that the fee per

application be increased to \$9,500 and be adjusted for inflation. It also requires that the fees be deposited to the Permit Processing Improvement Fund. Estimated APD fees are \$47,500,000 in 2016. For more information please refer to the discussion in the Oil and Gas Management Program and the Permanent Operating Funds Chapter.

**Onshore Oil and Gas Lease Inspection Fees** – The 2016 Budget includes a new inspection fee for onshore oil and gas leases. The fee would support Federal efforts to provide services to ensure the proper reporting of oil and gas production, protect human safety and the environment, and conserve energy resources. These fees will be credited to the Management of Lands and Resources appropriation. The estimate for 2016 is \$48,000,000.

**Grazing Administrative Processing Fees** – The Budget includes appropriations language for a three-year pilot project to allow the BLM to recover some of the costs of issuing grazing permits/leases on BLM lands. The BLM would charge a fee of \$2.50 per Animal Unit Month, which would be collected along with current grazing fees. The fee will assist the BLM in processing pending applications for grazing permit renewals. During the period of the pilot, the BLM would work through the process of promulgating regulations for the continuation of the grazing administrative fee as a cost recovery fee after the pilot expires. The fees will be credited to the Management of Lands and Resources appropriation. The estimate for 2016 is \$16,500,000.

**Other Collections** – Other receipts collected by the BLM are from land rentals for authorized commercial, industrial, and residential purposes; annual rentals from rights-of-way permits (except those issued under the authority of the *Mineral Leasing Act*); and from contributions. These consist of funds contributed to the BLM from non-Federal sources for projects or work authorized by the *Federal Land Policy and Management Act*, *Taylor Grazing Act*, *Sikes Act*, and other laws. Additional information on other collections is included in the Miscellaneous Permanent Payments, Permanent Operating Funds, and Miscellaneous Trust Fund sections. In 2014, the BLM collected \$10,600,000 from wind and solar renewable energy rights-of-way rents. Estimates for 2015 and 2016 are of \$17,500,000 and \$21,900,000 respectively.

**Amounts Not Included in Collections** – Payments to western Oregon counties under the *Secure Rural Schools and Community Self-Determination Act of 2000*, as amended, were made partially from receipts produced in those counties in the preceding year. Over half of the amounts paid, however, are derived from an appropriation from the General Fund. Of the total of estimated payments of \$39,630,000 to the western Oregon counties for 2013 in 2014, \$21,952,000 million were appropriated from the General Fund. That payment is the final payment authorized under the current law.

SRS payments were enacted by P.L. 106-393 for Fiscal Years 2002 through 2006. They were extended for one year (FY 2007) by Public Law 110-28, extended for Fiscal Years 2008 through 2011 by Public Law 110-343; and were extended in one year increments for 2012 and 2013 by Public Laws 112-141 and 113-40. (Payments are made in the year following the year for which the payments are authorized.) The 2016 Budget reflects a five-year reauthorization of funding through mandatory USFS appropriations

# Management of Lands and Resources

# MANAGEMENT OF LANDS AND RESOURCES

## Appropriations Language

For necessary expenses for protection, use, improvement, development, disposal, cadastral surveying, classification, acquisition of easements and other interests in lands, and performance of other functions, including maintenance of facilities, as authorized by law, in the management of lands and their resources under the jurisdiction of the Bureau of Land Management, including the general administration of the Bureau, and assessment of mineral potential of public lands pursuant to section 1010(a) of Public Law 96–487 (16 U.S.C. 3150(a)), ~~[\$970,016,000]~~*\$1,067,466,000*, to remain available until expended, *including all such amounts as are collected from permit processing fees, as authorized but made subject to future appropriation by section 35(d)(3)(A)(i) of the Mineral Leasing Act (30 U.S.C. 191), as amended, except that amounts from permit processing fees may be used for any bureau-related expenses associated with the processing of oil and gas applications for permits to drill and related use authorizations; of which \$3,000,000 shall be available in fiscal year [2015]2016 subject to a match by at least an equal amount by the National Fish and Wildlife Foundation for cost-shared projects supporting conservation of Bureau lands; and such funds shall be advanced to the Foundation as a lump-sum grant without regard to when expenses are incurred.*

[In addition, \$32,500,000 is for the processing of applications for permit to drill and related use authorizations, to remain available until expended, to be reduced by amounts collected by the Bureau and credited to this appropriation that shall be derived from a fee of \$6,500 per new application for permit to drill that the Bureau shall collect upon submission of each new application, and, in addition,] *In addition: (1) \$48,000,000, to remain available until expended, is for conducting oil and gas inspection activities, to be reduced by amounts collected by the Bureau and credited to this appropriation that shall be derived from onshore oil and gas inspection fees that the Bureau shall collect, as provided for in this Act, except that, for fiscal year 2016, inspection fees collected by the Bureau of Land Management may be used to fund personnel and mission-related costs to expand capacity and expedite orderly energy development subject to environmental safeguards, on Federal land, pursuant to the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1701 et seq.), including the review of applications for permits to drill; (2) \$16,500,000, to remain available until expended, is for the processing of grazing permits and leases, to be reduced by the amounts collected by the Bureau and credited to this appropriation, which shall be derived from a \$2.50 per animal unit month administrative fee, as provided for in this Act; and (3) \$39,696,000 is for Mining Law Administration program operations, including the cost of administering the mining claim fee program, to remain available until expended, to be reduced by amounts collected by the Bureau and credited to this appropriation from mining claim maintenance fees and location fees that are hereby authorized for fiscal year [2015]2016, so as to result in a final appropriation estimated at not more than ~~[\$970,016,000]~~*\$1,067,466,000*, and \$2,000,000, to remain available until expended, from communication site rental fees established by the Bureau for the cost of administering communication site activities. (Department of the Interior, Environment, and Related Agencies Appropriations Act, 2015.)*

## Appropriation Language Citation

- 1. For necessary expenses for protection, use, improvement, development, disposal, cadastral surveying, classification, acquisition of easements and other interests in lands, and performance of other functions, including maintenance of facilities, as authorized by law, in the management of lands and their resources under the jurisdiction of the Bureau of Land Management, including the general administration of the Bureau**

Appropriates funds to implement the Federal Land Policy and Management Act of 1976, as amended (43 U.S.C. 1701 et seq.) for management of the public lands on a multiple-use and sustained yield basis and such laws applicable to the management of the public lands.

- 2. and assessment of mineral potential of public lands pursuant to section 1010(a) of Public Law 96-487 (16 U.S.C. 3150(a))**

The Alaska National Interest Lands Conservation Act, Public Law 96-487 (16 U.S.C. 3150(a)) established the Alaska mineral resource assessment program to assess the oil, gas, and other mineral potential on all public lands in the State of Alaska in order to expand the data base with respect to the mineral potential of such lands. The appropriations language provision allows the funds appropriated under this section to also be used for the Alaska mineral resource assessment program to assess the oil, gas, and other mineral potential on all public lands in the State of Alaska in order to expand the data base with respect to the mineral potential of such lands.

- 3. \$1,067,466,000 to remain available until expended**

The language makes the appropriations to the account available on a no-year basis. This type of account allows BLM a valuable degree of flexibility needed to support multi-year contracts, maintenance, construction, operations, and rehabilitation of public lands.

- 4. including all such amounts as are collected from permit processing fees, as authorized but made subject to future appropriation by section 35(d)(3)(A)(i) of the Mineral Leasing Act (30 U.S.C. 191), as amended, except that amounts from permit processing fees may be used for any bureau-related expenses associated with the processing of oil and gas applications for permits to drill and related use authorizations,**

Included within the appropriated amount is 15 percent of the fees from applications for permits to drill (APD) not permanently appropriated by the National Defense Authorization Act for Fiscal Year 2015 (P.L. 113-291), Section 3021(b), BLM Oil and Gas Permit Processing Fee, which amended the Mineral Leasing Act to authorize a fee of \$9,500 per APD (in 2016) on lands under the management of the BLM. The NDAA authorizes the fee for fiscal years 2016 through 2026. For years 2016 through 2019, the NDAA permanently appropriates 85 percent of the fees collected, and makes the remaining 15 percent of fee revenues subject to appropriation. For years 2020 through 2026, 100 percent of the fee revenues are permanently appropriated.

- 5. of which \$3,000,000 shall be available in fiscal year 2016 subject to a match by at least an equal amount by the National Fish and Wildlife Foundation for cost-shared**

**projects supporting conservation of Bureau lands and such funds shall be advanced to the Foundation as a lump-sum grant without regard to when expenses are incurred.**

Provides authority for the BLM to transfer \$3.0 million to the National Fish and Wildlife Foundation (NFWF) for the purposes described and that the grant is advanced to NFWF as a lump sum in advance of them incurring or planning the expenses associated with the projects, provided NFWF matches the grant on a dollar for dollar basis from other funds.

- 6. \$48,000,000, to remain available until expended, is for conducting oil and gas inspection activities, to be reduced by amounts collected by the Bureau and credited to this appropriation that shall be derived from onshore oil and gas inspection fees that the Bureau shall collect, as provided for in this Act,**

This new provision appropriates the BLM an amount to be offset by revenues generated by new fees to be assessed for oil and gas inspection activities. The appropriations language authorizes the BLM to spend the estimated \$48.0 million in fee collections on inspection activities, and this \$48.0 million appropriation is then reduced by the amount of inspection fees actually collected. The fee schedule is located in Section 114 of the General Provisions, and is also shown in the Summary of Program Changes and Legislative Proposals chapter of the BLM Budget Justification.

- 7. except that, for fiscal year 2016, inspection fees collected by the Bureau of Land Management may be used to fund personnel and mission-related costs to expand capacity and expedite orderly energy development subject to environmental safeguards, on Federal land, pursuant to the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1701 et seq.), including the review of applications for permits to drill;**

This language provides BLM a valuable degree of flexibility by permitting the \$48 million for oil and gas inspection activities to also be used to support orderly, rational development of oil and gas on public lands. Beginning in 2016, BLM's Oil and Gas Management program will be increasingly dependent on permanent appropriations, in the form of lease rental revenues and APD fees deposited into the Permit Processing Improvement Fund, which are not provided at the beginning of the year, but instead only become available as they are collected over the course of the fiscal year. The appropriations language will assist BLM in executing all of its oil and gas management responsibilities effectively throughout the year.

- 8. \$16,500,000, to remain available until expended, is for the processing of grazing permits and leases, to be reduced by the amounts collected by the Bureau and credited to this appropriation, which shall be derived from a \$2.50 per animal unit month administrative fee, as provided for in this Act;**

This new provision appropriates the BLM an amount to be offset by revenues generated by an administrative processing fee to offset the increased cost of administering the livestock grazing program on public lands managed by the BLM. BLM would charge a fee of \$2.50 per Animal Unit Month, which would be collected along with current grazing fees. The fee will assist the BLM in processing pending applications for grazing permit renewals. The proposed fee

authority is located in Section 416 of the General Provisions and is also shown in the Summary of Program Changes and Legislative Proposals chapter of the BLM Budget Justification.

- 9. \$39,696,000 is for Mining Law Administration program operations including the cost of administering the mining claim fee program, to remain available until expended, to be reduced by amounts collected by the Bureau and credited to this appropriation from mining claim maintenance fees and location fees that are hereby authorized for fiscal year 2016,**

This continued provision appropriates the BLM an amount to be offset by revenues generated by an mining claim fees (maintenance fees and location fees) to offset the cost of providing access to mineral resources in an environmentally responsible manner on public lands managed by the BLM.

- 10. so as to result in a final appropriation estimated at not more than \$1,067,466,000,**

This is the final budget authority, net of offsetting collections for oil and gas inspection and enforcement, mining law administration, and grazing permit administration.

- 11. \$2,000,000, to remain available until expended, from communication site rental fees established by the Bureau for the cost of administering communication site activities.**

This continued provision authorizes the BLM to spend revenues (actual collections, but not to exceed \$2.0 million) generated by a fee on rights-of-way authorizations under Title V of the Federal Land Policy and Management Act of 1976, as amended (43 U.S.C. 1701 et seq.).

## Authorizations

**General Authorizing Legislation** - The following authorize the general activities of the Bureau of Land Management or govern the manner in which BLM's activities are conducted.

**Reorganization Plan No. 3 of 1946, §403**

Establishes the BLM.

**Federal Land Policy and Management Act of 1976, as amended (43 U.S.C. 1701 et seq.)**

Outlines functions of the BLM, provides for administration of public lands through the BLM, provides for management of the public lands on a multiple-use basis, and requires land-use planning including public involvement and a continuing inventory of resources. The Act establishes as public policy that, in general, the public lands will remain in Federal ownership, and also authorizes:

- Acquisition of land or interests in lands consistent with the mission of the Department and land use plans;
- Permanent appropriation of road use fees collected from commercial road users, to be used for road maintenance;
- Collection of service charges, damages, and contributions and the use of funds for specified purposes;
- Protection of resource values;
- Preservation of certain lands in their natural condition;
- Compliance with pollution control laws;
- Delineation of boundaries in which the Federal government has right, title, or interest;
- Review of land classifications in land use planning; and modification or termination of land classifications when consistent with land use plans;
- Sale of lands if the sale meets certain disposal criteria;
- Issuance, modification, or revocation of withdrawals;
- Review of certain withdrawals by October 1991;
- Exchange or conveyance of public lands if in the public interest;
- Outdoor recreation and human occupancy and use;
- Management of the use, occupancy, and development of the public lands through leases and permits;
- Designation of Federal personnel to carry out law enforcement responsibilities;
- Determination of the suitability of public lands for rights-of-way purposes (other than oil and gas pipelines) and specification of the boundaries of each right-of-way;
- Recordation of mining claims and reception of evidence of annual assessment work.

**Omnibus Public Land Management Act, 2009 (P.L. 111-11):**

- Codifies the 26 million acre National Landscape Conservation System as a permanent program in the BLM.
- Established one new National Monument in New Mexico.
- Established four new National Conversation Areas: two in Utah, one in Colorado, and one in New Mexico.
- Added approximately 2 million acres to the National Wilderness Preservation System.
- Added approximately 1,000 miles to the National Wild and Scenic River System.
- Directed eight conveyances of public land out of Federal ownership.

<b><i>National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.)</i></b>	Requires the preparation of environmental impact statements for Federal projects which may have a significant effect on the environment. It requires systematic, interdisciplinary planning to ensure the integrated use of the natural and social sciences and the environmental design arts in making decisions about major Federal actions that may have a significant effect on the environment.
<b><i>The Endangered Species Act of 1973, as amended (16 U.S.C. 1531 et seq.)</i></b>	Directs Federal agencies to ensure that their actions do not jeopardize threatened and endangered species and that through their authority they help bring about the recovery of these species.
<b><i>Energy Policy Act of 2005 (P.L. 109-58)</i></b>	Directs Federal agencies to undertake efforts to ensure energy efficiency, and the production of secure, affordable, and reliable domestic energy.
<b><i>An Act to Amend the Reclamation Recreation Management Act of 1992 (P.L. 107-69)</i></b>	Provides for the security of dams, facilities and resources under the jurisdiction of the Bureau of Reclamation. Authorizes the Secretary of the Interior to authorize law enforcement personnel from the Department of the Interior to enforce Federal laws and regulations within a Reclamation Project or on Reclamation lands.
<b><i>The Civil Service Reform Act of 1978 (5 U. S. C. 1701)</i></b>	Requires each executive agency to conduct a continuing program to eliminate the under-representation of minorities and women in professional, administrative, technical, clerical, and other blue collar employment categories within the Federal services.
<b><i>The Civil Rights Act of 1964, as amended (42 U.S.C. 2000)</i></b>	Requires development and maintenance of affirmative action programs to ensure non-discrimination in any employment activity.
<b><i>The Paperwork Reduction Act of 1980 (44 U.S.C. 3501-3520)</i></b>	Provides national Federal information policy, and requires that automatic data processing and telecommunication technologies be acquired and used to improve services, delivery, and productivity, and to reduce the information processing burden for the Federal government and the general public.
<b><i>The Electronic FOIA Act of 1996 (P.L. 104-231)</i></b>	Requires that government offices make more information available in electronic format to the public.
<b><i>The Information Technology Management Reform Act of 1996 (P.L. 104-106 §5001)</i></b>	Requires agencies to more effectively use Information Technology to improve mission performance and service to the public, and strengthen the quality of decisions about technology and mission needs through integrated planning, budgeting, and evaluation.
<b><i>The Chief Financial Officers Act of 1990 (U.S.C. 501)</i></b>	Requires that a Chief Financial Officer be appointed by the Director of OMB and that this CFO will provide for the production of complete, reliable, timely and consistent financial information for use by the executive branch of the Government and the Congress in the financing, management, and evaluation of Federal programs.
<b><i>The Government Performance and Results Act of 1993 (P.L. 103-62)</i></b>	Requires 10 federal agencies to launch a 3-year pilot project beginning in 1994, to develop annual performance plans that specify measurable goals, and produce annual reports showing how they are achieving those goals.

***P.L. 101-512, November 5, 1990***

Authorizes BLM to negotiate and enter into cooperative arrangements with public and private agencies, organizations, institutions, and individuals to implement challenge cost share programs.

***Notification and Federal Employee Anti-discrimination and Retaliation Act of 2001 (P.L. 107-174)***

Requires Federal agencies be accountable for violations of antidiscrimination and whistleblower protection laws, and for other purposes.

***Safe Drinking Water Act Amendments of 1977 (42 U.S.C. 201)***

Requires compliance with all Federal, State, or local statutes for safe drinking water.

***E-Government Act of 2002 (P.L. 107-374)***

Requires the use of internet-based information technology to improve public access to information and to promote electronic services and processes.

***Specific Authorizing Legislation*** - In addition to the above laws that provide general authorization and parameters, a number of laws authorize specific program activities, or activities in specific or designated areas.

### **Soil, Water and Air Management**

***Consolidated Appropriations Act, 2005 (P.L. 108-447) – including the authorizations:***

- Watershed Restoration Projects (P.L. 106-291, Section 331, as amended by P.L. 108-447, Division E, Section 336) - permits the Colorado State Forest Service to perform watershed restoration and protection services on BLM lands in the State of Colorado when similar and complementary work is being performed on adjacent state lands.
- Snake River Water Rights Act of 2004 (P.L. 108-447, Division J, Title X) – Directs BLM to transfer, at the selection of the Nez Perce Tribe, certain land managed by the BLM in northern Idaho to the Bureau of Indian Affairs to be held in trust for the Tribe. Existing rights and uses on the selected lands remain in effect until the date of expiration of the lease or permit. The fair market value of the parcels of land selected by the Tribe is not to exceed \$7 million.

***Burnt, Malheur, Owyhee, and Powder River Basin Water Optimization Feasibility Study Act of 2001 (P.L. 107-237)***

Authorizes the Secretary of the Interior to conduct feasibility studies on water optimization in the Burnt River, Malheur River, Owyhee River, and Powder River Basins.

***Colorado River Basin Salinity Control Act Amendment of 1984 (43 U.S.C. 1593)***

Directs the Department to undertake research and develop demonstration projects to identify methods to improve the water quality of the Colorado River. The amendment requires BLM to develop a comprehensive salinity control program, and to undertake advanced planning on the Sinbad Valley Unit.

***Soil and Water Resources Conservation Act of 1977 (16 U.S.C. 2001)***

Provides for conservation, protection and enhancement of soil, water, and related resources.

***The Clean Air Act of 1990, as amended (42 U.S.C. 7401, 7642)***

Requires BLM to protect air quality, maintain Federal and State designated air quality standards, and abide by the requirements of the State implementation plans.

***The Clean Water Act of 1987, as amended (33 U.S.C. 1251)***

Establishes objectives to restore and maintain the chemical, physical and biological integrity of the nation's water.

***P.L. 107-30***

Provides further protections for the watershed of the Little Sandy River as part of the Bull Run Watershed Management Unit, Oregon, and adds responsibilities for the Secretary of the Interior and the Bureau of Land Management.

### **Range Management**

***Taylor Grazing Act of 1934 (43 U.S.C. 315), as amended by the Act of August 28, 1937 (43 U.S.C. 1181d)***

Authorizes the establishment of grazing districts, regulation and administration of grazing on the public lands, and improvement of the public rangelands. It also authorizes the Secretary to accept contributions for the administration, protection, and improvement of grazing lands, and establishment of a trust fund to be used for these purposes.

***Public Rangelands Improvement Act of 1978 (43 U.S.C. 1901-1908)***

Provides for the improvement of range conditions to assure that rangelands become as productive as feasible for watershed protection, livestock grazing, wildlife habitat, and other rangeland values. The act also authorizes:

- Research on wild horse and burro population dynamics, and facilitates the humane adoption or disposal of excess wild free roaming horses and burros, and
- Appropriation of \$10 million or 50 percent of all moneys received as grazing fees, whichever is greater, notwithstanding the amount of fees collected.

***Bankhead Jones Farm Tenant Act of 1937 (7 U.S.C. 1010 et seq.)***

Authorizes management of acquired farm tenant lands, and construction and maintenance of range improvements. It directs the Secretary of Agriculture to develop a program of land conservation and utilization to adjust land use to help control soil erosion, conduct reforestation, preserve natural resources, develop and protect recreational facilities, protect watersheds, and protect public health and safety.

***Carl Levin and Howard P. "Buck" McKeon National Defense Authorization Act for Fiscal Year 2015 (P.L. 113-291)***

Provides authority to continue the terms and conditions of a grazing permit or leases that has expired until any environmental analysis and documentation has been completed.

## **Forest Management**

***Healthy Forests Restoration Act of 2003 (P.L. 108-148) – 16 U.S.C. 6501 et seq.***

Authorized the BLM and the U.S. Forest Service to conduct hazardous fuels reduction projects on federal land in wildland-urban interface areas and on certain other federal lands using expedited procedures.

***Forest Ecosystem Health & Recovery Fund (P.L. 102-381)***

The initial purpose of this fund was to allow quick response to fire and reforestation of forests damaged by insects, disease, and fire. Expanded authorization in the 1998 Interior and Related Agencies Appropriations Act allows activities designed to reduce the risk of catastrophic damage to forests in addition to responding to damage events. Funds in this account are derived from the Federal share (defined as the portion of receipts not paid to the counties under 43 U.S.C. 1181f and 43 U.S.C. 1181-1 et seq., and P.L. 106-393) of receipts from all BLM timber salvage sales and all BLM forest health restoration treatments funded by this account. The authority to make deposits and to spend from this fund was provided in the 2010 Interior Appropriations Act (P.L. 111-88, 123 STAT. 2906) and expires at the end of fiscal year 2015.

***Sec. 347 of Public Law 105-277, as amended by Public Law 108-7 and Public Law 113-79***

Permanently authorizes the Bureau of Land Management, via agreement or contract as appropriate, to enter into stewardship contracting projects with private persons or other public or private entities to perform services to achieve land management goals for the national forests and the public lands that meet local and rural community needs.

## **Riparian Management**

***The Federal Noxious Weed Act of 1974, as amended (7 U.S.C. 2814)***

Provides for the designation of a lead office and a person trained in the management of undesirable plants; establishment and funding of an undesirable plant management program; completion and implementation of cooperative agreements with State agencies; and establishment of integrated management systems to control undesirable plant species.

***Noxious Weed Control Act of 2004 (P.L. 108-412)***

Establishes a program to provide assistance through States to eligible weed management entities to control or eradicate harmful, nonnative weeds on public and private lands.

***Carlson-Foley Act of 1968 (42 U.S.C. 1241-1243)***

Authorizes BLM to reimburse States for expenditures associated with coordinated control of noxious plants.

## **Cultural Resources Management**

***P.L. 107-346***

To convey certain property to the City of St. George, Utah, in order to provide for the protection and preservation of certain rare paleontological resources on that property, and for other purposes.

***The Federal Cave Resource Protection Act of 1988 (16 U.S.C. 4301)***

Provides for the protection of caves on lands under the jurisdiction of the Secretary, and the Secretary of Agriculture. Establishes terms and conditions for use permits, and penalties for violations.

***The Historic Sites Act (16 U.S.C. 461)***

Declares national policy to identify and preserve historic sites, buildings, objects, and antiquities of national significance, providing a foundation for the National Register of Historic Places.

***The National Historic Preservation Act of 1966, as amended (16 U.S.C. 470)***

Expands protection of historic and archaeological properties to include those of national, State and local significance. It also directs Federal agencies to consider the effects of proposed actions on properties eligible for or included in the National Register of Historic Places.

***The Archaeological Resources Protection Act of 1979, as amended (16 U.S.C. 470a, 470cc and 470ee)***

Requires permits for the excavation or removal of Federally administered archaeological resources, encourages increased cooperation among Federal agencies and private individuals, provides stringent criminal and civil penalties for violations, and requires Federal agencies to identify important resources vulnerable to looting and to develop a tracking system for violations.

***The Chacoan Culture Preservation Act of 1980 (16 U.S.C. 410; ii)***

Provides for preservation, protection, research, and interpretation of the Chacoan system, including 33 archaeological protection sites, located throughout the San Juan Basin on public, State, Indian and private lands.

***The Native American Graves Protection and Repatriation Act of 1990 (25 U.S.C. 3001)***

Requires agencies to inventory archaeological and ethnological collections in their possession or control (which includes non-federal museums) for human remains, associated funerary objects, sacred objects, and objects of cultural patrimony; identify them geographically and culturally; and notify appropriate tribes within 5 years.

***Galisteo Basin (New Mexico) Archaeological Sites Protection Act (P.L. 108-208)***

Authorizes the Secretary of the Interior to administer the designated sites under this Act and other laws to protect, preserve, provide for research on, and maintain these archaeological resources.

**Wild Horse and Burro Management*****Wild Free-Roaming Horse and Burro Act of 1971 (P.L. 92-195), as amended***

The Secretary is authorized and directed to protect and manage wild free-roaming horses and burros as components of the public lands, and he may designate and maintain specific ranges on public lands as sanctuaries for their protection and preservation, where the Secretary after consultation with the wildlife agency of the State wherein any such range is proposed and with the Advisory Board established in section 7 of this Act deems such action desirable. The Secretary shall manage wild free-roaming horses and burros in a manner that is designed to achieve and maintain a thriving natural ecological balance on the public lands.

***Federal Land Policy and Management Act of 1976, as amended (43 U.S.C. 1701 et seq.)***

For the purpose of furthering knowledge of wild horse and burro population dynamics and their interrelationship with wildlife, forage and water resources, and assisting the Secretary in making his determination as to what constitutes excess animals, the Secretary shall contract for a research study of such animals with such individuals independent of Federal and State government as may be recommended by the National Academy of Sciences for having scientific expertise and special knowledge of wild horse and burro protection, wildlife management and animal husbandry as related to rangeland management.

***Public Rangelands Improvement Act of 1978 (43 U.S.C. 1901-1908)***

Based on the information available to him at the time, if the Secretary determines that overpopulation of wild free-roaming horses and burros exists on a given area of the public lands and that action is necessary to remove excess animals, he shall immediately remove excess animals from the range so as to achieve appropriate management levels. Such action shall be taken until all excess animals have been removed so as to restore a thriving natural ecological balance to the range, and protect the range from the deterioration associated with overpopulation.

The Secretary shall cause such number of additional excess wild free-roaming horses and burros to be humanely captured and removed for private maintenance and care for which he determines an adoption demand exists by qualified individuals, and for which he determines he can assure humane treatment and care (including proper transportation, feeding, and handling).

### **Wildlife Management**

***National Fish and Wildlife Foundation Establishment Act, as amended, (16 U.S.C. 3701)***

Established the National Fish and Wildlife Foundation as a nonprofit corporation to encourage, accept and administer private gifts of property, and to undertake activities to further the conservation and management of fish, wildlife, and plant resources of the U.S.

***The Migratory Bird Conservation Act of 1929, as amended (16 U.S.C. 715) and treaties pertaining thereto***

Provides for habitat protection and enhancement of protected migratory birds.

***The Sikes Act of 1974, as amended (16 U.S.C. 670 et seq.)***

Provides for the conservation, restoration, and management of species and their habitats in cooperation with State wildlife agencies.

### **Wilderness Management**

***Defense Department FY 2006 Authorization Bill (P.L. 109-63)***

Provides for the designation and management of Cedar Mountain Wilderness in Utah.

***Tax Relief and Health Care Act of 2006***

Designates wilderness in White Pine County, Nevada.

<b><i>Otay Mountain Wilderness Act of 1999</i></b>	Establishes the Otay Mountain Wilderness Area in California, to be managed by the Secretary, acting through the Director of the Bureau of Land Management.
<b><i>Clark County Conservation of Public Land and Natural Resources Act of 2002 (P.L. 107-282) (16 USC 460qqq)</i></b>	Establishes Wilderness Areas, including Sloan Canyon National Conservation Area, and to promote conservation, improve public land, and provide for high quality development in Clark County, Nevada, and for other purposes.
<b><i>Ojito Wilderness Act (P.L. 109-94)</i></b>	Designates New Mexico's Ojito Wilderness Study Area as wilderness, to take certain land into trust for the Pueblo of Zia, and for other purposes.
<b><i>P.L. 107-361</i></b>	Authorizes the Secretary of the Interior to convey certain public lands within the Sand Mountain Wilderness Study Area in Idaho to resolve an occupancy encroachment dating back to 1971.
<b><i>Northern California Coastal Wild Heritage Wilderness Act (P.L. 106-362)</i></b>	Provides for the designation and management of Wilderness Areas in California.
<b><i>Big Sur Wilderness and Conservation Act of 2002 (P.L. 107-370)</i></b>	Designates certain lands in the State of California as components of the National Wilderness Preservation System, and for other purposes.
<b><i>Utah West Desert Land Exchange Act of 2000 (P.L. 106-301)</i></b>	Authorizes exchange of public lands for certain lands owned by the State of Utah within existing and proposed Wilderness Study Areas in the West Desert Region of Utah.
<b><i>The Land Use Planning Act (P. L. 94-579), as amended by the California Desert Protection Act of 1994 (P.L. 103-433) (43 USC 1781)</i></b>	Establishes boundaries and management responsibilities for areas in the California Desert, and establishes 69 new Wilderness Areas.
<b><i>The Wilderness Act of 1964 (16 U.S.C. 1131 et seq.)</i></b>	Provides for the designation and preservation of Wilderness Areas.
<b><i>Carl Levin and Howard P. "Buck" McKeon National Defense Authorization Act for Fiscal Year 2015 (P.L. 113-291)</i></b>	Establishes the Rocky Mountain Front Conservation Management Area in Montana including 13,087 acres of BLM land; withdraws certain lands in the North Fork Federal Lands Withdraw Area from all forms of location, entry, and patent under mining laws, and disposition under all laws relating to mineral leasing and geothermal leasing; and designates 26,000 acres of land as wilderness.

### **Recreation Resources Management**

***Federal Lands Recreation Enhancement Act (P.L. 104-134)***

Provides authority to the Bureau of Land Management for collection of recreation fees to maintain and improve the quality of visitor amenities and services.

***The Land and Water Conservation Fund Act of 1965, as amended (16 U.S.C. 460 et seq.)***

Provides for the establishment of the Land and Water Conservation Fund, special BLM accounts in the Treasury, the collection and disposition of recreation fees, the authorization for appropriation of recreation fee receipts, and other purposes. Authorizes planning, acquisition, and development of needed land and water areas and facilities.

### **Oil & Gas Management**

***The Act of March 3, 1909, as amended, and the Act of May 11, 1938 (25 U.S.C. 396, 396(a))***

Provides the basic mandate under which BLM supervises minerals operations on Indian Lands. Provides that lands allotted to Indians, and unallotted tribal Indian lands, may be leased for mining purposes, as deemed advisable by the Secretary.

***The Federal Oil and Gas Royalty Management Act of 1982 (30 U.S.C. 1701) (FOGRMA)***

Comprehensive law dealing with royalty management on Federal and Indian leases. In addition to revenue accountability, it includes provisions pertaining to onshore field operations, inspections, and cooperation with State and Indian tribes; duties of lessees and other lease interest owners, transporters, and purchasers of oil and gas; reinstatement of onshore leases terminated by operation of law; and a requirement that the Secretary study whether royalties are adequate for coal, uranium, and non-energy leasable minerals.

***Energy Policy and Conservation Act Amendments of 2000 (P.L. 106-469, Section 604) –***

Directs the Secretary of the Interior, in consultation with the Secretaries of Agriculture and Energy, to conduct an inventory of all onshore Federal lands to determine reserve estimates of oil and gas resources underlying the lands and the extent and nature of any impediments to development of the oil and gas resources.

***The Federal Onshore Oil and Gas Leasing Reform Act of 1987 (30 U.S.C. 226, et seq.)***

Establishes a new oil and gas leasing system, and changes certain operational procedures for onshore Federal lands.

***The Combined Hydrocarbon Leasing Act of 1981 (30 U.S.C. 181, 351)***

Permits the owners of oil and gas leases issued after November 16, 1981, to explore, develop, and produce tar sands. Authorizes the issuance of combined hydrocarbon leases in specified areas designated by the Department of the Interior on November 20, 1980.

***Reorganization Plan No. 3 of 1946, §402 (60 Stat. 1099)***

Transferred mineral leasing functions to the Secretary, from the Secretary of Agriculture, for certain acquired lands.

***The Interior and Related Agencies Appropriations Act for 1981 (42 U.S.C. 6508)***

Provides for competitive leasing of oil and gas in the National Petroleum Reserve in Alaska.

***The Geothermal Steam Act of 1970 (30 U.S.C. 1001)***

Authorizes the Secretary to issue leases for the development of geothermal resources.

***The Geothermal Steam Act Amendments of 1988***

Lists significant thermal features within the National Park System requiring protection, provides for lease extensions and continuation of leases beyond their primary terms, and requires periodic review of cooperative or unit plans of development.

***The Mining and Minerals Policy Act of 1970 (30 U.S.C. 21a)***

Establishes policy of fostering development of economically stable mining and minerals industries, their orderly and economic development, and studying methods for disposal of waste and reclamation.

***The Act of March 3, 1879, as amended (43 U.S.C. 31(a))***

Provides for the inventory and classification of the public lands, and examination of the geologic structure, mineral resources, and products of the national domain.

***Consolidated and Further Continuing Appropriations Act, 2015 (P.L. 113-235)***

Provides authority for an Internet-based oil and gas leasing program.

***Carl Levin and Howard P. "Buck" McKeon National Defense Authorization Act for Fiscal Year 2015 (P.L. 113-291)***

Authorizes processing fee for applications for permit to drill (APD) for 2016 through 2026, with collections deposited into and permanently appropriated from the BLM Permit Processing Fund (PPIF), except in years 2016 through 2019 when only 85 percent of APD fee revenues are permanently appropriated. The NDAA also permanently extends BLM access to the mineral lease rent revenues deposited in the PPIF. Prior to enactment of the NDAA, BLM access to the PPIF would have expired at the end of 2015, in accordance with Section 365 of the Energy Policy Act of 2005, which created the PPIF. Amends the Mineral Leasing Act to provide authority for establish and implement internet leasing for on-shore oil and gas leases.

### **Coal Management**

***The Surface Mining Control and Reclamation Act of 1977 (30 U.S.C. 1201 et seq.)***

Provides that lands may be declared unsuitable for surface coal mining where significant adverse impacts could result to certain wildlife species.

***The Federal Coal Leasing Amendments Act of 1976 (30 U.S.C. 201, et seq.)  
The Mining and Minerals Policy Act of 1970 (30 U.S.C. 21a)***

Requires competitive leasing of coal on public lands, and mandates a broad spectrum of coal operations requirements for lease management.

Establishes policy of fostering development of economically stable mining and minerals industries, their orderly and economic development, and studying methods for disposal of waste and reclamation.

***The Act of March 3, 1879, as amended (43 U.S.C. 31(a))***

Provides for the inventory and classification of the public lands, and examination of the geologic structure, mineral resources, and products of the national domain.

### **Other Mineral Resources**

***Mineral Materials Act of 1947 (30 U.S.C. 601)***

Authorizes the BLM to sell sand, gravel, crushed stone, clay and pumice at fair market value and to grant free-use permits to Government agencies and nonprofit organizations, so long as public land resources, the environment and the public are protected.

***The Multiple Surface Use Act (30 U.S.C. 611)***

Specified that sand, gravel, and certain other minerals were no longer locatable under the General Mining Law of 1872 but were subject to disposal by sale under the Materials Act of 1947.

### **Alaska Conveyance**

***The Alaska Native Claims Settlement Act of 1971 (ANCSA) (43 U.S.C. 1612)***

Requires the survey of Alaska Native lands for conveyance to Native corporations and individuals.

***The Alaska Statehood Act, as amended (48 U.S.C. Chap. 2 note)***

Requires the survey of lands for conveyance to the State.

***The Alaska National Interest Lands Conservation Act of 1980 (16 U.S.C. 3101 et seq.)***

Provides for the designation and conservation of certain public lands in Alaska. BLM responsibilities include six Wild and Scenic Rivers, nine study rivers, one National Conservation Area, one National Recreation Area, and one National Scenic Highway.

***Alaska Native Allotment Subdivision Act (P.L. 108-337)***

Allows Native Alaskans to subdivide their restricted allotment lands with the approval of the Secretary of the Interior.

***Alaska Land Acceleration Act of 2003 (P.L. 108-452)***

Reduces the delays that exist in the adjudication and conveyance of Alaska Native Allotments, State and other land entitlements that are authorized under the Alaska Native Allotment Act of 1906, the Alaska Native Claims Act, and the Alaska Statehood Act.

***43 U.S.C. 2***

Provides that the Secretary shall perform all executive duties pertaining to the surveying and sale of public lands, private claims of public lands, and the issuing of patents for all grants of land under the authority of the Government.

***43 U.S.C. 52***

Provides that the Secretary shall cause all public lands to be surveyed and monumented, that all private land claims shall be surveyed after they have been confirmed, and that the Secretary shall transmit plats of all lands surveyed to such officers as he may designate.

### **Cadastral Survey**

***Executive Order 12906***

The executive branch is developing, in cooperation with State, local, and tribal governments, and the private sector, a coordinated National Spatial Data Infrastructure to support public and private sector applications of geospatial data. BLM is charged with developing data standards, ensuring the capability to share cadastral data from the Public Land Survey System of the U.S. with partners.

### **Lands & Realty**

***Native American Technical Corrections Act of 2004 (P.L. 108-204, Title II)***

Placed in trust for the Pueblo of Santa Clara in New Mexico approximately 2,484 acres of BLM-managed land. Placed in trust for the Pueblo of San Ildefonso in New Mexico approximately 2,000 acres of BLM-managed land.

***P.L. 107-374***

Direct the Secretary of the Interior to grant to Deschutes and Crook Counties, Oregon, a right-of-way to West Butte Road.

***P. L. 109-46***

Directs the Secretary of Agriculture to convey certain land to Lander County, Nevada, and the Secretary of Interior to convey certain land to Eureka County, Nevada, for continued use of cemeteries.

***P. L. 109-69***

Directs the Secretary of the Interior to convey certain land in Washoe County, Nevada, to the Board of Regents of the University and Community College System of Nevada.

***P. L. 109-130***

Directs the Secretary of the Interior to convey a parcel of real property to Beaver County, Utah.

***Southern Nevada Public Land Management Act of 1998 (P.L. 105-263)***

Authorizes the disposal through sale of 27,000 acres in Clark County, Nevada, the proceeds of which are distributed as follows: (a) 5 percent for use in the general education program of the State of Nevada; (b) 10 percent for use by Southern Nevada Water Authority for water treatment and transmission facility infrastructure in Clark County, Nevada; and (c) the remaining 85 percent to be used to acquire environmentally sensitive lands in Nevada; to make capital improvements to areas administered by NPS, FWS and BLM in Clark County, Nevada; to develop a multi-species habitat plan in Clark County, Nevada; to develop parks, trails, and natural areas in Clark County, Nevada; and to provide reimbursements for BLM costs incurred in arranging sales and exchanges under this Act.

***Clark County Conservation of Public Land and Natural Resources Act of 2002 (P.L. 107-282) as amended by P.L. 108-447***

Enlarges the area in which the BLM can sell lands under the Southern Nevada Public Land Management Act; approves a land exchange in the Red Rock Canyon Area; designates wilderness; designates certain BLM lands for a new airport for Las Vegas; and gives land to the State and City for certain purposes.

***Lincoln County Lands Act of 2000 (P.L. 106-298)***

Authorizes disposal of certain Federal lands through public sale in Lincoln County, Nevada, and provides for use of the receipts: 5 percent to the State of Nevada, 10 percent to the County, and 85 percent to an interest bearing account that is available for expenditure without further appropriation.

***Lincoln County Conservation, Recreation and Development Act (PL 108-424)***

Addresses a wide-range of public lands issues in Lincoln County, Nevada, designates as wilderness 768,294 acres of BLM-managed lands and releases from wilderness study area (WSA) status 251,965 acres of public land. The bill also directs the BLM to dispose of up to 90,000 acres of public land and divides the proceeds 85 percent to a federal fund and 15 percent to state and county entities, establishes utility corridors, transfers public lands for state and county parks, creates a 260-mile OHV trail and resolves other public lands issues.

***Consolidated Appropriations Act, 2005 (P.L. 108-447) – including the authorizations:***

- Foundation for Nevada's Veteran's Land Transfer Act of 2004 (P.L. 108-447, Division E, Section 144) – authorizes the transfer of public lands from the BLM to the Veteran's Administration for the construction and operation of medical and related facilities.
- To Resolve a Minor Boundary Encroachment on Lands of the Union Pacific Railroad Company in Tipton, CA (P.L. 108-447, Division E, Section 139) – relinquishes the Federal government's reversionary interest in an abandoned railroad right-of-way in order to clear the cloud on the title of a small parcel of private land.
- Federal Land Recreation Enhancement Act (P.L. 108-447, Division J, Title VIII) – Gives the BLM authority to collect entrance fees at certain recreation areas for ten years beginning in 2005.

***P.L. 107-324***

A bill to direct the Secretary of the Interior to convey certain land to the City of Haines, Oregon.

***T'uf Shur Bien Preservation Trust Area Act (P.L. 108-7, Division F, Title IV)***

Amended FLPMA, Section 316, to require that any corrections to land conveyance documents which affect the boundaries of land administered by a federal agency other than the BLM be made only after consultation with, and the approval of, the head of such other agency.

***P.L. 107-371***

Directs the Secretary of the Interior to disclaim any Federal interest in lands adjacent to Spirit Lake and Twin Lakes in Idaho resulting from possible omission of lands from an 1880 survey.

***P.L. 107-350***

Provides for the conveyance of certain public land in Clark County, Nevada, for use as a shooting range.

***P.L. 107-138***

Require the valuation of non-tribal interest ownership of subsurface rights within the boundaries of the Acoma Indian Reservation, and for other purposes.

***P.L. 106-206***

Revised authority for commercial filming and still photography activities. In doing so, it clarifies authority on the requirements for commercial filming and still photography permits and establishes limitations on filming activities for the protection of resources.

<b><i>Ivanpah Valley Airport Public Land Transfer Act (P.L. 106-145)</i></b>	Authorizes sale at fair market value of certain lands in Clark County, Nevada to Clark County, for use as an airport. Provides that the funds be deposited in the special account for the Southern Nevada Public Lands Act, to be used for acquisition of private in-holdings in the Mojave National Preserve and protection of petroglyph resources in Clark County, Nevada.
<b><i>The Burton-Santini Act (P.L. 96-586)</i></b>	Authorizes the Secretary to sell not more than 700 acres of public lands per calendar year in and around Las Vegas, Nevada. The proceeds are to be used to acquire environmentally sensitive lands in the Lake Tahoe Basin of California and Nevada.
<b><i>The Federal Power Act of 1920, as amended (16 U.S.C. 818)</i></b>	Allows other uses of Federal waterpower withdrawals with Federal Energy Regulatory Commission approval.
<b><i>The Act of May 24, 1928, as amended (49 U.S.C. App. 211-213)</i></b>	Authorizes the Secretary to lease contiguous unappropriated public lands (not to exceed 2,560 acres) for a public airport.
<b><i>The Airport and Airway Improvement Act of 1982 (49 U.S.C. 2215)</i></b>	Authorizes conveyance of lands to public agencies for use as airports and airways.
<b><i>The Engle Act of February 28, 1958 (43 U.S.C. 156)</i></b>	Provides that withdrawals for the Department of Defense for more than 5,000 acres shall be made by Congress.
<b><i>The Recreation and Public Purposes Act of 1926, as amended (43 U.S.C. 869)</i></b>	Authorizes the Secretary to classify public lands for lease or sale for recreation or public purposes.
<b><i>The R&amp;PP Amendment Act of 1988</i></b>	Provides that suitable public lands may be made available for use as solid waste disposal sites, in a manner that will protect the U.S. against unforeseen liability.
<b><i>The Desert Land Act of 1877 (43 U.S.C. 321-323)</i></b>	Provides authority to reclaim arid and semi-arid public lands of the western States through individual effort and private capital.
<b><i>The Act of August 30, 1949, as amended (43 U.S.C. 687(b))</i></b>	Authorizes the Secretary to dispose of public lands, and certain withdrawn Federal lands in Alaska, that are classified as suitable for housing and industrial or commercial purposes.
<b><i>The Utah School Lands Act (P.L. 103-93)</i></b>	Authorizes the Secretary to enter into land exchanges for certain purposes.
<b><i>Federal Land Exchange Facilitation Act of 1988 (43 U.S.C. 1716)</i></b>	Amends FLPMA to provide for the streamlining of Federal land exchange procedures.
<b><i>The Arkansas-Idaho Land Exchange Act of 1992 (P.L. 102-584)</i></b>	Authorizes the Secretary to enter into land exchanges for certain purposes.

***Carl Levin and Howard P. "Buck" McKeon National Defense Authorization Act for Fiscal Year 2015 (P.L. 113-291)***

Authorizes the Secretary to enter into land exchanges and to convey land for certain purposes.

### **Hazard Management and Resource Restoration**

***The Clean Water Act of 1987, as amended (33 U.S.C. 1251)***

Establishes objectives to restore and maintain the chemical, physical and biological integrity of the nation's water.

***The Resource Conservation and Recovery Act as amended by Federal Facility Compliance Act of 1992 (42 U.S.C. 6901-6992)***

Authorizes EPA to manage, by regulation, hazardous wastes on active disposal operations. Waives sovereign immunity for Federal agencies with respect to all Federal, State, and local solid and hazardous waste laws and regulations. Makes Federal agencies subject to civil and administrative penalties for violations, and to cost assessments for the administration of the enforcement.

***The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 as amended by the Superfund Amendments and Reauthorization Act of 1986 (42 U.S.C. 9601-9673)***

Provides for liability, risk assessment, compensation, emergency response, and cleanup (including the cleanup of inactive sites) for hazardous substances. Requires Federal agencies to report sites where hazardous wastes are or have been stored, treated, or disposed, and requires responsible parties, including Federal agencies, to clean-up releases of hazardous substances.

***Community Environmental Response Facilitations Act of 1992 (42 U.S.C. 9620(h))***

Amendment to the *Comprehensive Environmental Response, Compensation, and Liability Act of 1980*, as amended, which expands on the risk assessment requirements for land transfers and disposal.

***The Emergency Planning and Community Right-To-Know Act of 1986 (42 U.S.C. 11001-11050)***

Requires the private sector to inventory chemicals and chemical products, to report those in excess of threshold planning quantities, to inventory emergency response equipment, to provide annual reports and support to local and State emergency response organizations, and to maintain a liaison with the local and state emergency response organizations and the public.

***The Pollution Prevention Act of 1990 (42 U.S.C. 13101-13109)***

Requires and encourages prevention and reduction of waste streams and other pollution through minimization, process change, and recycling. Encourages and requires development of new technology and markets to meet the objectives.

### **Annual Maintenance**

***National Dam Inspection Act of 1972 (33 U.S.C. 467)***

Requires the Secretary of the Army, acting through the Chief of Engineers, to carry out a dam inspection program to protect human life and property.

### **National Conservation Lands**

***The King Range National Conservation Area Act of 1970, as amended (P.L. 91-476) (16 U.S.C. 460y)***

Provides for management and development of the King Range National Conservation Area for recreational and other multiple-use purposes. It authorizes the Secretary to enter into land exchanges and to acquire lands or interests in lands within the national conservation area.

***Alaska National Interest Lands Conservation Act (P.L. 96-487) (16 USC 460mm)***

Established the Steese National Conservation Area to be managed by the BLM.

***National Parks and Recreation Act of 1978 Amendment (P.L. 101-628)***

Establishes the Yaquina Head Outstanding Natural Area in the State of Oregon in order to protect the unique scenic, scientific, educational, and recreational values of such lands. Requires the Secretary of the Interior to develop a management plan for such Area. The Secretary of the Interior shall manage the monument through the Bureau of Land Management.

***Arizona Desert Wilderness Act of 1990 – Title II – Designation of the Gila Box Riparian National Conservation Area (P.L. 101-628) (16 USC 460ddd)***

Establishes the Gila Box Riparian National Conservation Area. The Secretary of the Interior shall manage the monument through the Bureau of Land Management.

***The Snake River Birds of Prey National Conservation Area Act of 1993 (P.L. 103-64) (16 USC 460iii)***

Establishes the Snake River Birds of Prey National Conservation Area, Idaho, to provide for the conservation, protection, and enhancement of raptor populations, habitats, and associated natural resources and of the scientific, cultural, and educational resources of the public lands. Requires the Secretary of the Interior to finalize a new comprehensive management plan for the Area. Authorizes the Secretary, acting through the Bureau of Land Management, to establish a visitor's center to interpret the history and geological, ecological, natural, cultural and other resources of the Area and biology of the raptors and their relationships to humans.

***An Act to Establish the Red Rock Canyon National Conservation Area in Nevada (P.L. 101-621) as amended by 107-282 (16 U.S.C. 460ccc)***

Provides for the conservation, protection, and enhancement of cultural and natural resources values by the BLM within the Red Rock Canyon National Conservation Area.

***An Act to Establish the El Malpais National Monument and the El Malpais National Conservation Area in New Mexico, P.L. 100-225 (16 U.S.C. 460uu 21)***

Provides for the protection and management of natural and cultural resource values within the El Malpais National Conservation Area by the BLM.

***An Act to Provide for the Designation and Conservation of Certain Lands in Arizona and Idaho(P.L. 100-696) (16 U.S.C. 460xx)***

Establishes the San Pedro Riparian National Conservation Area in Arizona and provides for management and development for recreation and other multiple-use purposes.

***Black Canyon of the Gunnison National Park and Gunnison Gorge National Conservation Area Act of 1999 (6 USC 410fff), as amended (PL 106-76 & 108-128)***

Establishes the Gunnison Gorge National Conservation Area to be managed by the Secretary, acting through the Director of the Bureau of Land Management. PL 108-128 amended the boundaries of the National Conservation Area.

***Black Rock Desert/High Rock Canyon Emigrant Trails National Conservation Area Act of 2000, as amended, (P.L. 106-554 & P.L. 107-63). (16 U.S.C. 460ppp)***

Establishes the Black Rock Desert/High Rock Canyon Emigrant Trails National Conservation Area in Nevada, to be managed by the Secretary, acting through the Director of the Bureau of Land Management.

***Colorado Canyons National Conservation Area and Black Ridge Canyon Wilderness Act of 2000 (16 U.S.C. 460mmm, P.L. 106-353 ), as amended by P.L. 108-400 (43 USC 460mmm)***

Establishes the McInnis Canyons National Conservation Area (formerly Colorado Canyons National Conservation Area) and Black Ridge Canyon Wilderness Area in Colorado, to be managed by the BLM.

***Las Cienegas National Conservation Area Act (P.L. 106-538) (16 U.S.C. 460ooo)***

Establishes the Las Cienegas National Conservation Area in Arizona, to be managed by the Secretary, acting through the Director of the Bureau of Land Management.

***Santa Rosa and San Jacinto Mountains National Monument Act of 2000 (P.L. 106-351) (16 U.S.C. 431)***

Establishes the Santa Rosa and San Jacinto Mountains National Monument in California, to be managed by the Secretary, acting through the Director of the Bureau of Land Management.

***Steens Mountain Cooperative Management and Protection Act of 2000 (P.L. 106-399) (16 U.S.C. 460nnn)***

Establishes the Steens Mountain Cooperative Management and Protection Area in Oregon, to be managed by the Secretary, acting through the Director of the Bureau of Land Management.

***Presidential Proclamation 6920 of 1996***

Established the Grand Staircase - Escalante National Monument, to be managed by the Secretary of the Interior, acting through the Director of the Bureau of Land Management.

<b><i>Presidential Proclamation 7265 of 2000</i></b>	Established the Grand Canyon - Parashant National Monument. The Secretary of the Interior shall manage the monument through the Bureau of Land Management and the National Park Service. The Bureau of Land Management shall have primary management authority for those portions of the Monument outside of the Lake Mead National Recreation Area.
<b><i>Presidential Proclamation 7264 of 2000</i></b>	Established the California Coastal National Monument. The Secretary of the Interior shall manage the monument through the Bureau of Land Management.
<b><i>Presidential Proclamation 7263 of 2000</i></b>	Established the Agua Fria National Monument. The Secretary of the Interior shall manage the monument through the Bureau of Land Management.
<b><i>P.L. 107-213</i></b>	Re-designate certain lands within the Craters of the Moon National Monument, and for other purposes.
<b><i>The Wild and Scenic Rivers Act of 1968, as amended (16 U.S.C. 1271 et seq.)</i></b>	Provided for the development and management of certain rivers. Authorized the Secretary to exchange or dispose of suitable Federally-owned property for non-Federal property within the authorized boundaries of any Federally-administered component of the National Wild and Scenic Rivers System.
<b><i>The National Trails System Act of 1968, as amended (16 U.S.C. 1241- 1249)</i></b>	Established a national trails system and requires that Federal rights in abandoned railroads be retained for trail or recreation purposes, or sold with the receipts to be deposited in the LWCF.
<b><i>The National Parks and Recreation Act of 1978 (16 U.S.C. 1242-1243)</i></b>	Established a number of national historic trails which cross public lands.
<b><i>Old Spanish Trail Recognition Act of 2002 (P.L. 107-325) Presidential Proclamation 8803 of 2012</i></b>	A bill to amend the National Trails System Act to designate the Old Spanish Trail as a National Historic Trail.  Established the Fort Ord National Monument.
<b><i>Presidential Proclamation 8946 of 2013</i></b>	Established the Rio del Norte National Monument.
<b><i>Presidential Proclamation 8947</i></b>	Established the San Juan Islands National Monument.
<b><i>Presidential Proclamation 9131</i></b>	Established the Organ Mountains-Desert Peaks National Monument.

### **Mining Law Administration**

***The Omnibus Budget Reconciliation Act of 1993 (P.L. 103-66)***

Establishes an annual \$100 per claim maintenance fee for unpatented mining claims and sites through 1998 and requires that the fee be adjusted for inflation. The law allows a waiver from the fee for those claimants who hold 10 or fewer claims. It also establishes a \$25 per claim location fee for new claims, to be paid when they are recorded with BLM. The Act also broadened the BLM's authority to collect recreation use fees.

***The General Mining Law of 1872, as amended (30 U.S.C. 22, et seq.), as amended by P.L. 108-447, Division E, Section 120, (30 U.S.C. 23 et seq.)***

Provides for locating and patenting mining claims where a discovery has been made for locatable minerals on public lands in specified States, mostly in the western U.S.

***The Act of March 3, 1879, as amended, (43 U.S.C. 31(a))***

Provides for the inventory and classification of the public lands, and examination of the mineral resources and products of the national domain.

***The Mining and Minerals Policy Act of 1970, (30 U.S.C. 21a) (30 U.S.C. 1601, et seq.)***

Sets out the policy of fostering development of economically stable mining and mineral industries, and studying methods for waste disposal and reclamation.

***The Department of the Interior and Related Agencies Appropriations Act for 1989 (43 U.S.C. 1474)***

Provides that receipts for 1989 and thereafter from administrative fees (service charges) established by the Secretary for processing actions relating to the administration of the General Mining Laws shall be immediately available to BLM for mining law administration program operations.

***The 1994 Interior and Related Agencies Appropriations Act (P.L. 103-138)***

Provides that funds shall be available to BLM for mining law administration program operations, to be reduced by amounts collected from annual mining claim fees.

***The 1999 Interior and Related Agencies Appropriations Act ( P.L. 105-277)***

Reauthorizes the collection of annual mining claim maintenance fees through 2001. Extends the recreation fee demonstration program through fiscal year 2001, with collected funds remaining available through fiscal year 2004.

***The 2002 Interior and Related Agencies Appropriations Act ( P.L. 107-63)***

Reauthorizes the collection of annual mining claim maintenance fees through 2003. Extends the recreation fee demonstration program through fiscal year 2004, with collected funds remaining available through fiscal year 2007.

### **Other Authorizations**

***The Food Security Act of 1985 (7 U.S.C. 148f)***

Provides for the transfer of funds to the Secretary of Agriculture for Mormon cricket and grasshopper control.

***Indian Self Determination  
And Education Assistance  
Act (P.L. 93-638)***

Provides for non-competitive contracts, grants, or cooperative agreements entered into between a tribal organization and the Federal government for the planning, conduct, and administration of programs which enhance Indian educational achievement or provide other Federal services more responsive to the needs and desires of those communities.

***Oregon Land Exchange  
Act of 2000 (P.L. 106-257)***

Authorizes exchange of specified parcels of public and national forest lands in Oregon for specified parcels of private lands.

***P.L. 109-127***

Revokes a Public Land Order with respect to certain lands erroneously included in the Cibola National Wildlife Refuge, California.

Management of Lands and Resources**

*(Dollars In Thousands)*

<b>Fixed Cost Changes and Projections</b>	<b>2015 Total or Change</b>	<b>2015 to 2016 Change</b>
<b>Change in Number of Paid Days</b>	<b>+0</b>	<b>+2,079</b>
This column reflects changes in pay associated with the change in the number of paid days between 2015 and 2016. Total paid days for FY 2016 is 262 which is one day (+1) increase from FY2015 paid days of 261. FTE hours for FY2016 is 2096		
<b>Pay Raise</b>	<b>+5,317</b>	<b>+6,582</b>
The change reflects the salary impact of a programmed pay raise increases. This estimate reflects one quarter (October-December) of the programmed pay raise for 2015. This estimate reflects three quarter (January - September) of the programmed pay raise for 2016.		
<b>Seasonal Federal Health Benefit Increase</b>	<b>+0</b>	<b>+29</b>
The change reflects changes in the fixed cost portion of the Seasonal Health Benefits Model. Remaining costs associated with offering Health Benefits to seasonal employees are reflected as program changes in the Administrative Support subactivity.		
<b>Employer Contribution to FERS</b>	<b>38,957</b>	<b>+204</b>
The change reflects the directed increase of 0.5% in employer's contribution to the Federal Employee Retirement System. This estimate captures an increase of 0.5% to FY2016 employer contribution to the Federal Employee Retirement Service (FERS). The FY2015 FERS contribution assumption was 13.2%. The FY2016 level is 13.7%. The baseline for these estimates is the FY2014 pay actuals.		
<b>Departmental Working Capital Fund</b>	<b>24,024</b>	<b>777</b>
The change reflects expected changes in the charges for centrally billed Department services and other services through the Working Capital Fund. These charges are detailed in the Budget Justification for Department Management.		
<b>Departmental Working Capital Fund ITT</b>	<b>717</b>	<b>-116</b>
The change reflects expected changes in the charges for centrally billed Department services through the Working Capital Fund.		
<b>Worker's Compensation Payments</b>	<b>8,405</b>	<b>-252</b>
The adjustment is for changes in the costs of compensating injured employees and dependents of employees who suffer accidental deaths while on duty. Costs for 2016 will reimburse the Department of Labor, Federal Employees Compensation Fund, pursuant to 5 U.S.C. 8147(b) as amended by Public Law 94-273.		
<b>Unemployment Compensation Payments</b>	<b>6,858</b>	<b>123</b>
The adjustment is for projected changes in the costs of unemployment compensation claims to be paid to the Department of Labor, Federal Employees Compensation Account, in the Unemployment Trust Fund, pursuant to Public Law 96-499.		
<b>Rental Payments</b>	<b>63,393</b>	<b>2,905</b>
The adjustment is for changes in the costs payable to General Services Administration (GSA) and others resulting from changes in rates for office and non-office space as estimated by GSA, as well as the rental costs of other currently occupied space. These costs include building security; in the case of GSA space, these are paid to Department of Homeland Security (DHS). Costs of mandatory office relocations, i.e. relocations in cases where due to external events there is no alternative but to vacate the currently occupied space, are also included.		
<b>O&amp;M Increases from Moves out of GSA-Space into Bureau Space</b>	<b>-</b>	<b>-</b>
In accordance with space maximization efforts across the Federal Government, this adjustment captures the associated increase to baseline operations and maintenance requirements resulting from movement out of GSA or direct-leased (commercial) space and into Bureau-owned space. While the GSA portion of fixed costs will go down as a result of these moves, Bureaus often encounter an increase to baseline O&M costs not otherwise captured in fixed costs. This category of funding properly adjusts the baseline fixed cost amount to maintain steady-state funding for these requirements.

### Justification of the 2016 Program Changes

The 2016 budget request for the Land Resources activity is \$253,724,000 and 1,435 FTE. This reflects net program changes totaling +\$7,377,000 and +62 FTE and internal transfers totaling -\$1,912,000 and 0 FTE from the 2015 enacted level.

### Activity Description

This activity provides for integrated management of public land renewable and cultural resources. The BLM manages these resources on a landscape basis, with each program contributing to the overall health of the land. Conserving, restoring, and sustaining land health is the foundation for the BLM's renewable resources management and is key to the agency's long-term strategic vision. Livestock grazing, timber harvesting and other resource uses can be sustained over time only if the land is managed to restore or sustain a healthy condition.

The programs in this activity, in concert with other BLM programs, work together to support the BLM mission by providing renewable resources, commercial and recreational uses and aesthetic benefits through healthy forests, healthy rangeland ecosystems, functioning watersheds and properly functioning riparian habitat. The BLM provides forage for livestock, protects cultural values, and maintains thriving wild horse and burro herds.

## Activity: Land Resources

### Subactivity: Soil, Water & Air Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Soil, Water & Air Management	\$000	42,939	43,239	+359	-863	+4,020	46,755	+3,516
	FTE	221	221		+0	+0	221	+0

Summary of 2016 Program Changes/Internal Transfers for Soil, Water & Air Management:	(\$000)	FTE
Enhance Core Capability	+1,520	+0
Youth in the Great Outdoors	+2,500	+0
Internal Transfer to National Conservation Lands	-863	+0
<b>Total</b>	<b>+3,157</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Soil, Water & Air Management activity is \$46,755,000, and 221 FTE. It reflects program changes of +\$4,020,000 and 0 FTE and an internal transfer of -\$863,000 and 0 FTE from the 2015 enacted level.

**Enhance Core Capabilities (+\$1,520,000/0 FTE)** – The 2016 budget request includes a program increase of \$1.5 million. The additional funds will better enable the BLM to meet its highest priority needs to meet federal and state regulatory requirements and compliance reporting, as well as enhance soil information necessary for project specific planning and emergency stabilization. The funds will be used to increase regional air resource monitoring and modeling efforts, specifically designed to share data across Federal agencies and support regional conventional and renewable energy development; enhance the development of Ecological Site Descriptions on range lands and within pilot areas for forestry, riparian and wetlands; increase water quantity compliance monitoring and reporting necessary to meet regulatory requirements as well as protect Federal reserve water rights; and support watershed assessment projects that promote an integrated implementation approach across BLM programs.

**Youth in the Great Outdoors (+\$2,500,000/0 FTE)** – The 2016 budget request includes a \$2.5 million increase for the Secretary's Youth in the Great Outdoors Initiative. The increased funding will allow the BLM to expand efforts to provide opportunities for the next generation to play, learn, serve, and work on public lands. Special consideration will be given to those programs that provide youth from diverse backgrounds with hands-on learning in Science, Technology, Engineering, and Mathematics (STEM), and prepare them for careers in STEM fields.

**Transfer to National Conservation Lands (-\$863,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$863,000 will be transferred from Soil, Water and Air Management. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount

represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

### **Program Overview**

The Soil, Water & Air Management Program supports a significant number of BLM activities and use authorizations, including energy development, endangered species recovery, grazing, recreation, and fire rehabilitation, that rely on the management of soil, water and air resources. The Soil, Water & Air Management Program collects and analyzes the soil, water, and air resource data needed to manage natural resources effectively, and applies expertise to assess, sustain, protect, and improve the productivity and resiliency of public lands. This data is a key component of sustainable BLM land management decisions. The program relies heavily on collaborative public-private partnerships to improve and enhance watershed, landscape, and air-shed conditions.

The Soil, Water & Air Management Program is responsible for:

- Compliance with anti-pollution laws such as the Clean Water Act and the Clean Air Act;
- Conducting soil surveys to understand soil distribution, properties and responses to various uses, as well as to understand important climate change processes such as terrestrial carbon sequestration;
- Developing ecological site descriptions to understand the processes that influence the type, amount, and distribution of vegetation within defined landscapes as well as provide key information to land managers for climate adaptation strategies;
- Monitoring and managing soils to support current land-health standards, sustain plant and animal productivity, maintain associated water and air quality, as well as reduce threats to human health and safety;
- Monitoring water resource conditions and trends, protecting Federal water rights and, where appropriate, acquiring water rights to ensure adequate quantities of water for public land management purposes;
- Monitoring water quality as well as identifying, promoting and implementing best-management practices to maintain and improve functioning aquatic ecosystems;
- Reducing salt and sediment discharge to waters in order to ensure usable water supplies for millions of downstream users;
- Assessing and analyzing impacts to air quality, visibility, noise, and climate; and
- Reporting greenhouse gas emissions as required under Executive Order 13514.

### **Means and Strategies**

- The Soil Water & Air Management Program will continue to promote watershed function and soil stability as the primary means to achieve BLM performance goals. Priority will be placed on providing land managers with access to the expertise needed to identify, monitor and assess the environmental effects of actions, use authorizations and their associated decisions.
- A five-year water resource strategy is under development and will set the priorities for the Water Program through 2020. Drought conditions continue to affect the western U.S. and are exacerbating soil erosion, air quality issues and water shortages. The Soil, Water & Air Program is developing a water strategy with these threats at the forefront, and is working with other BLM programs, as well as collaborative partners, to develop

- approaches that assist in managing valuable fundamental resources under persistent drought conditions.
- The BLM has drafted manual sections for water quality and groundwater and plans to finalize both manuals in 2015, as well as draft a handbook for watershed assessments.
- An air resource handbook has been drafted and will be completed in 2015.
- A five-year soil resource strategy is under development and will set the priorities for the Soil Program through in 2020. The strategy will help identify ecosystem services provided by soils within a landscape or watershed, as well as identify ways to improve collaboration between other programs and partners.

### **Critical Factors and Demands**

The BLM addresses a number of critical factors and demands in its Soil, Water and Air Program. These include the following:

- A changing climate and its potential to alter landscapes; the quantity, quality and distribution of water resources; soil quality; air quality; vegetative conditions and wildlife habitat; as well as associated socioeconomic values;
- Uncertainties regarding groundwater flows, soil properties and air resource impacts that, in many areas, influence decision-making;
- The establishment of extensive renewable energy development opportunities on public lands is a BLM priority. Hydrologists, soil scientists and air resource specialists are needed to assess and manage the resource impacts associated with this development.
- Greater water demands for economic development and requirements for ecosystem function are increasing the need to perfect and protect Federal water right interests.
- Stricter air quality standards, existing non-attainment areas, and visibility regulations are increasing the workload and technical demands associated with ensuring that activities that emit dust, ozone, smoke and other pollutants comply with the Clean Air Act.
- Increases in landscape disturbances magnify the challenges associated with meeting applicable water quality standards.

### **2016 Program Performance**

The Soil, Water & Air Management Program will continue to make progress towards key performance goals in 2016. Primary focus areas will include:

**Water Quality** - Improving or maintaining water quality on public lands remains an important objective. Efforts will continue to focus on implementing and refining best management practices for new and existing land use authorizations and activities, changing current management practices where appropriate, and restoring degraded watershed function. Increasing core capabilities will allow the program to support integrated watershed assessment and implementation pilot projects.

**Ecological Site Descriptions (ESD)** - ESDs are considered the best analytical approach for predicting how vegetation will respond to changes in management or climate conditions at the local and landscape scales. The Soil, Water & Air Management Program will fund multiple projects to aid in the development of ESDs needed for sage-grouse habitat management and energy development planning. In 2015, the BLM began collaborating with the Natural Resources Conservation Service and the U.S. Forest Service through an Interagency

Workgroup to address ESD development and uses as they relate to soils, as well as interagency training opportunities. The Interagency Workgroup will remain active in 2016. Increasing core capabilities will allow BLM's full participation in the implementation of ESDs across the landscape at all levels of the Bureau and provide funding for completion of ESDs in critical planning areas as well as in support of climate change priorities.

**Water Rights** – Demands for processing reserved and appropriative water rights actions with related litigation activities are expected to remain high. A typical workload ranges between 3,000 and 5,000 actions per year nationwide.

**Colorado River Salinity Control** - Efforts to reduce the transport of salts and sediment into the Colorado River will continue. The BLM annual performance goal associated with the Colorado River Salinity Control Program aims to reduce the transport of salts and sediment from public lands into the Colorado River system as well as aid in the improvement of land health within the basin.

**Air Resources** – The BLM expects to increase monitoring and assessment work in 2016 by approximately 20 percent above the 2015 levels, with the focus on regional projects.

**Groundwater Resources** - Efforts to understand the impacts of hydraulic fracturing and energy developments on groundwater will continue in 2016.

This page intentionally left blank.

## Activity: Land Resources

### Subactivity: Rangeland Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Rangeland Management	\$000	79,000	79,000	+1,021	-601	-2,976	76,444	-2,556
	FTE	633	633		+0	-25	608	-25
Grazing Administration Management	\$000	0	0	+0	+0	+16,500	16,500	+16,500
	Offset	0	0	+0	+0	-16,500	-16,500	-16,500
	FTE	0	0		+0	+85	85	+85

Notes: *"The Range Improvements current mandatory appropriation is a collaborative activity of the Rangeland Management program. The 2015 enacted amount (post-sequester) for Range Improvements is \$9.28 million. The 2016 President's budget request for Range Improvements is \$10 million.*

*- The Resource Development Protection & Management permanent mandatory appropriation is a collaborative activity of the Rangeland Management program. The 2014 budget authority amount (post-sequester) for Resource Development Protection & Management was \$1.059 million. The 2015 estimated new budget authority amount for Resource Development Protection & Management is \$1.141 million.*

*- More information on these collaborative activities is found at the end of this section in a table titled Other Resources Supporting Rangeland Management and in the Range Improvements and Miscellaneous Trust Funds chapters, respectively.*

Summary of 2016 Program Changes/Internal Transfers for Rangeland Management:	(\$000)	FTE
Shift to Fees	-2,976	-25
Internal Transfer to National Conservation Lands	-601	+0
<b>Total</b>	<b>-3,577</b>	<b>-25</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Rangeland Management Program is \$76,444,000 and 608 FTE. This reflects a program change of \$-2,976,000 and -25 FTE and an internal transfer of -\$601,000 and 0 FTE from the 2015 enacted level.

**Grazing Permit Issuance/Shift Cost to Fees (-\$2,976,000/-25 FTE)** – The budget proposes to shift a portion of the costs of issuing and managing grazing permits from appropriated funds to fees. The reduction of \$3.0 million in the request for appropriations combined with the estimated \$16.5 million in fee collections from a new grazing administration fee will result in a net increase of \$13.5 million in funding resources available to address the grazing permit backlog. (Reference the Legislative Changes section below for a detailed description of the proposed administrative fee).

**Transfer to National Conservation Lands (-\$601,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$601,000 will be transferred from Rangeland Management. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the

amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

## Legislative Changes

**Permit Administrative Processing Fee** - The 2016 budget includes appropriations language for a three-year pilot project to allow the BLM to recover some of the costs of issuing grazing permits/leases on BLM lands. The BLM would charge a permit administrative fee of \$2.50 per Animal Unit Month, which would be collected along with current grazing fees. The budget estimates the permit administrative fee will generate \$16.5 million in 2016 and that it will assist the BLM in processing pending applications for grazing permit renewals. During the period of the pilot, the BLM will promulgate regulations for the continuation of the administrative fee as a cost-recovery fee, to be in place once the pilot expires.

*SEC. 417. Beginning on March 1, 2016, and only to the extent and in the amount provided in advance in appropriations Acts, the Secretary of Agriculture shall collect an annual administrative fee for grazing domestic livestock on National Forests in the 16 contiguous western States and on National Grasslands in the amount of \$2.50 per head month for cattle and its equivalent for other livestock. The administrative fee shall be billed and collected using the process as provided in sections 222.50 through 222.52 of title 36, Code of Federal Regulations. Fees collected may be used, subject to appropriation, to offset the cost of administering the livestock grazing program. Nothing in this provision shall affect the calculation, collection, distribution, or use of the grazing fee under 43 U.S.C. 1751(b), title III of the Bankhead Jones Farm Tenant Act (7 U.S.C. 1010), and implementing regulations.*

*In fiscal year 2016, beginning on March 1, 2016, and only to the extent and in the amount provided in advance in appropriations Acts, the Secretary of the Interior shall collect an administrative fee to offset the increased cost of administering the livestock grazing program on public lands managed by the Bureau of Land Management by charging \$2.50 per Animal Unit Month, which shall be billed, collected, and subject to the penalties using the same process as the annual grazing fee in 43 C.F.R. 4130.8–1. Penalties assessed shall be deposited in the General Fund of the Treasury. Nothing in this provision affects the calculation, collection, distribution, or use of the grazing fee under 43 U.S.C. 315–315rr, 43 U.S.C. 1751(b), 43 U.S.C. 1905, Executive Order 12548, or administrative regulation.*

## Program Overview

### Program Components

The Rangeland Management Program focuses on efforts to maintain or improve public land health through monitoring and land health evaluations; administration of grazing use through 10-year permit renewals; development of grazing systems and range improvements; grazing permit compliance inspections; management of permittee, allotment and resource data; and management of invasive species and noxious weeds. Priorities are placed on processing the most environmentally sensitive permits first, in order to best manage livestock use and improve or maintain healthy land conditions.

The BLM manages approximately 17,750 livestock grazing permits and leases on the public lands. Livestock grazing is an integral part of the BLM multiple use mission and is authorized by the Taylor Grazing Act (1934), the Federal Land Policy Management Act (1976) and the Publi

Rangeland Improvement Act (1978).

Livestock grazing serves as an important tool that provides environmental benefits such as preservation of open space, managing fuel loads to reduce wildfire risks and enhances distribution of available water for wildlife. Ranchers often serve as the eyes and ears for public land managers and assist with public health and safety. They provide public lands information, report wildfires, assist in wildfire suppression when appropriate, restore land health, and assist in search and rescue operations.

Rangeland stewardship is recognized with an annual award presented by BLM. Success stories demonstrate to the public that good stewardship is improving rangelands.

The BLM also leverages grazing receipts with funds from local permittees/lessees to construct range improvement projects (reference the Range Improvement Account section for additional information). As described in the 2013 DOI Economic Report, the BLM's management of livestock grazing had a positive impact of \$1.43 billion on the economy and supported 16,694 jobs nationwide.

Noxious weed and invasive species management is a critical component of the Rangeland Management Program. Cooperative Weed Management Area partnerships and other cooperative efforts leverage funding to assist with weed inventory, land treatments, monitoring, and project work to improve land health. The BLM is also striving to create Coordinated Invasive Species Management partnerships to leverage partnerships that will target invasive species on the public lands.

### **Critical Factors**

Critical factors affecting the Rangeland Management Program include the following:

- A changing climatic regime, resulting in more frequent and severe floods and extended droughts, requires aggressive pursuit of adaptive management strategies.
- Frequent and severe wildfires have reduced the diversity of the western rangelands and have accelerated the spread of invasive species and noxious weeds.
- Changing and competing public demands require continuous assessment and modification of grazing practices and have made environmental reviews more complex.
- Development of public lands as part of the Secretary's Powering Our Future initiative for renewable and non-renewable energy and mineral resources may require mitigation efforts to offset loss of rangeland resources.
- Limited baseline data about soils, ecological sites, and factors associated with land health stressors, combined with limited monitoring data, have led to a large number of environmental lawsuits.
- Invasive and noxious weeds spreading over seventy-nine million acres of BLM-managed lands require greater efforts to control and manage.
- The complexity of permit processing has increased due to heightened National Environmental Policy Act complexity and legal challenges, mitigation and monitoring requirements, severe weather patterns, drought, catastrophic fire and other multiple use public land challenges.
- Catastrophic outbreaks of grasshopper and Mormon cricket populations that impact vegetation require emergency responses by the BLM and other Federal agencies

## Means and Strategies

The Rangeland Management Program coordinates with other BLM programs and partner organizations to achieve integrated vegetation management at the landscape level. In this coordinated effort, the Rangeland Management Program is addressing critical factors through multiple avenues, including:

- Using eco-regional assessments to identify conservation, development and restoration opportunities and strategies;
- Monitoring the effectiveness of grazing management in achieving land use plan and activity plan objectives, and in meeting land health standards;
- Collecting core indicator data in upland habitats and supporting landscape-level land health and condition monitoring;
- Conducting interdisciplinary land health evaluations on a watershed or landscape scale to help ensure a balanced approach to livestock grazing;
- Promoting adaptive management strategies;
- Ensuring that land health considerations and resource conflicts are the primary factors used to prioritize allotments for processing livestock grazing permit renewals;
- Using the permit issuance process, the Allotment Management Plans, and the Coordinated Resource Management Plans (RMP) to ensure scientifically-based livestock grazing management;
- Tiering permit renewals to RMPs and larger-scale NEPA documents;
- Completing a business process review in consultation with the U.S. Forest Service to look for efficiencies in the permit renewal process;
- Coordinating with other programs to work towards a national land treatment geospatial dataset that documents the location of treatments on the landscape and tracks their effectiveness;
- Educating youth about the importance and complexity of rangeland resources;
- Leveraging program funds with other Federal, State, and local agencies, permittees, and non-governmental organizations to implement on-the-ground Healthy Landscape and invasive species and noxious weed projects;
- Continuing research efforts in the use of livestock as a tool to decrease fuel loads, especially annual cheatgrass, to prevent catastrophic wildfire and restore desirable perennial grasses and forbs; and
- Collecting and sharing weed inventory data with Federal, State and county partners to identify weed infestation locations.

## Grazing Permit Renewal

In 2016, the BLM will continue to focus on processing the most environmentally sensitive grazing permits, including those authorizing grazing in priority sage-grouse habitat. Focusing on the most environmentally sensitive allotments allows for increased land health assessment and quantitative data collection efforts; improve the usefulness of RMP/EIS and site-specific NEPA analyses; and result in grazing management decisions that guide land health solutions for the future. This strategy will assist in ensuring that the backlog of unprocessed permits consists of the least environmentally-sensitive allotments that are more custodial in nature or are already meeting land health standards

Chart 1

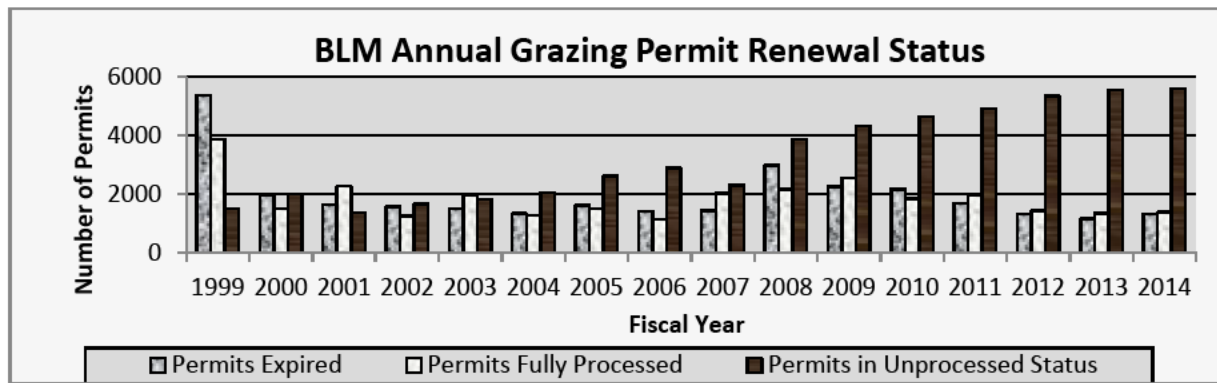

Chart 1 illustrates the status of processing grazing permits since 1999. Processing permits includes, at a minimum, NEPA and Endangered Species Act (ESA) compliance. Unprocessed permits are those issued in accordance with General Provisional language in Appropriations Acts.

Chart 2

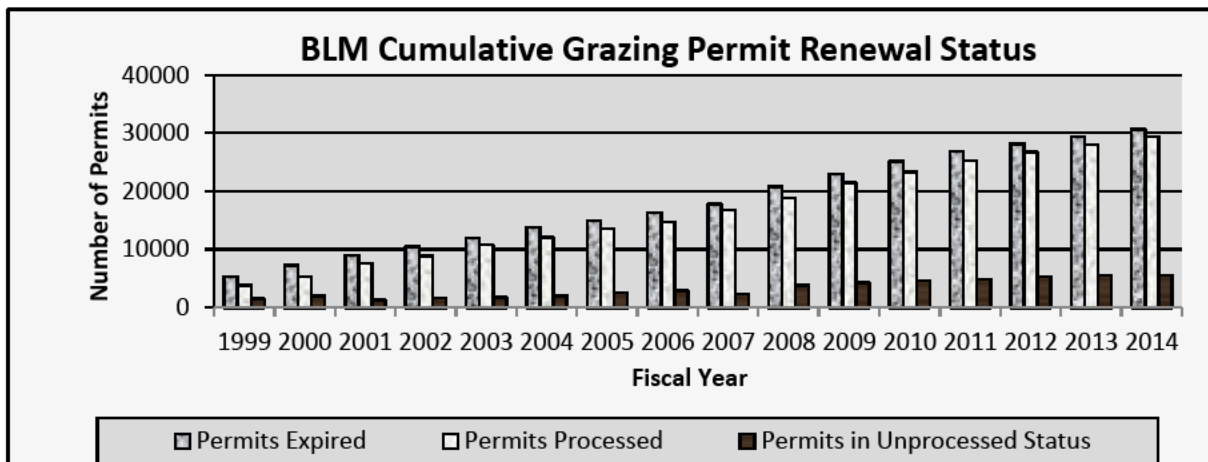

Chart 2 illustrates the cumulative number of permits processed since 1999. The number of permits processed per year is greater than the number of permits administered because some permits have expired more than once since 1999.

**Invasive Species and Weed Management**

Land areas that contain fire-adapted ecosystems and surface disturbance activities are most vulnerable to noxious weed and invasive species. The Noxious Weed and Invasive Species Management Program in the BLM Rangeland Management Program addresses these issues on BLM lands throughout the West. The BLM manages invasive species and weeds to improve habitat in the riparian areas that are critical to 60 percent of the wildlife species in semi-arid environments and to improve the terrestrial habitat areas that are critical for the Greater Sage-Grouse.

As part of the President’s Priority Agenda on “Enhancing the Climate Resilience of America’s Natural Resources”, the BLM will continue to prioritize its ongoing Early Detection

and Rapid Response efforts and focus on areas where invasive species were previously unknown or limited in their expansion on public lands.

Internal and external partners are critical for the BLM to succeed in detecting, controlling and managing noxious weeds and invasive species. The Partners Against Weeds Action Plan, Pulling Together, National Strategy for Invasive Plant Management, and the National Invasive Species Management Plan assist in education, prevention, inventory, and monitoring efforts while using an Integrated Pest Management approach to control and restore areas impacted by weeds and invasive species. The 2016 Department of Interior Invasive Species Strategy will provide Interior agencies further guidance for forming partnerships and leveraging resources across agencies.

**Chart 3**

**BLM Inventory and Treatment of Weeds**

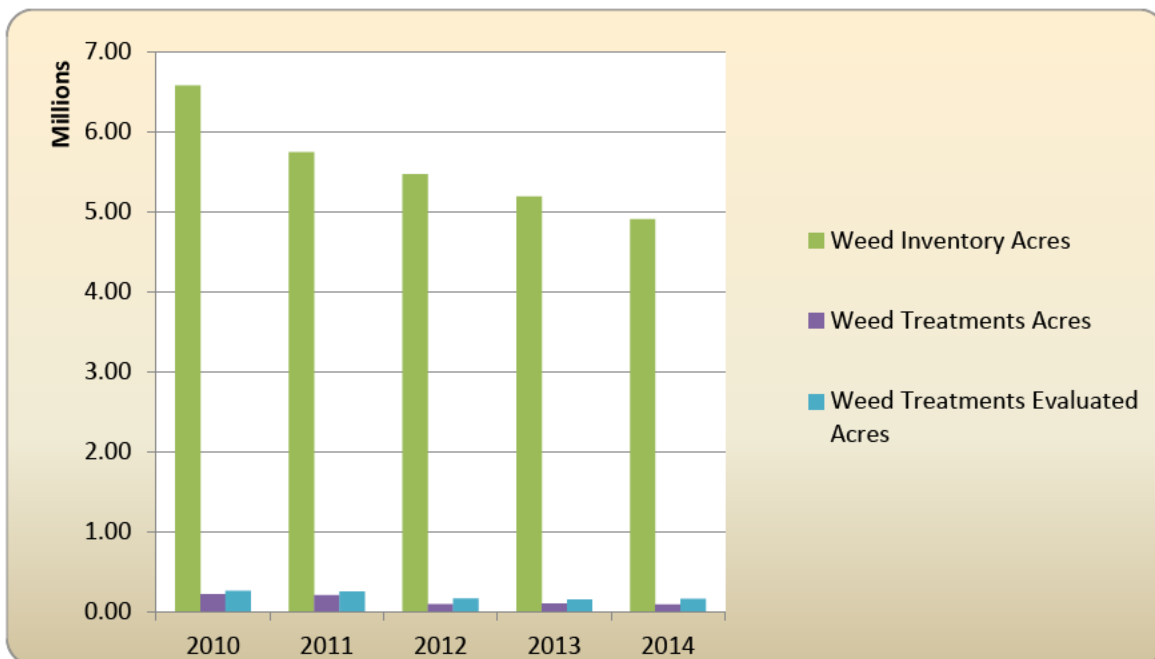

Chart 3 illustrates the number of acres inventoried and treated for weeds since 2010.

### Other Program Resources

Other Resources Supporting Rangeland Management:					
		2014 Actual	2015 Estimate	2016 Estimate	Change from 2015
Resource Development Protection & Management	\$000	1,057	1,713	1,713	+0
	FTE	3	3	3	+0
Range Improvements	\$000	9,280	9,270	10,000	+730
	FTE	36	36	36	+0

**Notes:**

- Resource Development Protection & Management amounts are shown as new budget authority derived from non-federal sources (contributed funds); the Taylor Grazing Act of 1934, as amended (43 USC 315h, 315i) appropriates these funds on a permanent basis. More information on Resource Development Protection & Management is found in the Miscellaneous Trust Funds chapter

- Range Improvements amounts are shown as new budget authority derived from 50 percent of the grazing fees collected on BLM-managed lands, with any difference appropriated from the General Fund; the annual Interior, Environment, and Related Agencies Appropriation Act appropriates these funds on a current basis. More information on Range Improvements budget request is found in the Range Improvements chapter

- Actual and estimated obligations, by year, for Resource Development Protection & Management and Range Improvements are found in President's Budget Appendix under the BLM section

\*Amounts in 2014 and 2015 are shown net of sequestration

### 2016 Program Performance

**Permit Renewal:** The BLM will continue to prioritize permit renewals based on environmental sensitivities and continue to review and use existing NEPA analyses as appropriate. When necessary, the BLM will supplement or tier to existing NEPA to address changes or analyze new information. When new NEPA is needed, BLM will analyze grazing use on an allotment or multiple allotment basis where appropriate. The BLM will continue to emphasize the collection of quantitative resource data for more defensible decisions, and will work closely with stakeholders, local governments, and the public during allotment plan development, evaluations and the NEPA process.

The BLM will use authorities provided in Federal Land Policy and Management Act as amended by PL 113-291 to continue to process the most environmentally sensitive allotments in preparation for renewing grazing permits. The BLM also plans to use the \$16.5 million collected under the proposed permit administrative fee to process existing 235 grazing permits and leases, monitor 200 allotments, assess 1.5 million acres of watersheds, and complete 185 land health evaluations.

In addition, about one-half of the \$16.5 million will be used to support new permit processing and monitoring of livestock use in sage-grouse habitat. The increase in monitoring effort is expected to occur in the allotments currently monitored. There will be an increased number of compliance visits to each allotment 3,000 to 4,000 other allotments within sage-grouse habitat.

The grazing permit/lease processing work is included within DOI Strategic Measure 'Percent of grazing permits and leases processed as planned consistent with applicable resource management plans'. Barring a catastrophic fire season in 2016, BLM field offices would be able to utilize the monitoring and land health assessment data collected from the past few years to

complete NEPA and other work related to grazing permits renewals.

**Noxious and Invasive Weeds and other invasive species:** The BLM will continue to inventory invasive and noxious weeds and other invasive species infestation on BLM lands. The BLM will identify and treat high-priority areas and monitor treated areas to determine the effectiveness of treatments. These efforts contribute to the DOI Strategic Measure 'Percent of baseline acres infested with invasive plant species that are controlled.'

**Land Health Assessment and Monitoring:** BLM-managed rangelands are assessed and monitored to direct management actions to areas not meeting desired conditions. Data collected during rangeland assessment and monitoring activities are used as one component in determining the DOI Strategic Measure 'Percent of DOI acres that have achieved desired conditions where condition is known and as specified in management plans.'

**Land Restoration:** Land treatments and project completion data will be used to determine the DOI Strategic Measure 'Number of DOI acres restored to the condition specified in management plans.'

## Activity: Land Resources

### Subactivity: Public Domain Forest Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Public Domain Forest Management	\$000	9,838	9,838	+180	-38	+0	9,980	+142
	FTE	72	72		+0	+0	72	+0

#### Summary of 2016 Program Changes/Internal Transfers for Public Domain Forest Management:

	(\$000)	FTE
Internal Transfer to National Conservation Lands	-38	+0
<b>Total</b>	<b>-38</b>	<b>+0</b>

Other Resources Supporting Public Domain Forest Mgmt:					
		2014 Actual	2015 Estimate	2016 Estimate	Change from 2015
Forest Ecosystem Health & Recovery	\$000	4,524	3,601	6,396	+2,795
	FTE	48	48	48	+0
USFS Forest Pest Control	\$000	310,000	606,000	500,000	-106,000
	FTE	0	0	0	+0

#### Notes:

- Forest Ecosystem Health & Recovery amounts are shown as new budget authority derived from the federal share of receipts from all BLM timber salvage sales, and from BLM forest health restoration treatments funded by this account; 43 USC 1736a appropriates these funds on a permanent basis. Forest Ecosystem Health & Recovery is used on both Public Domain Forestry and Oregon and California Grant Lands. More information on Forest Ecosystem Health & Recovery is found in the Permanent Operating Funds chapter.

- Amount in 2014 and 2015 for Forest Ecosystem Health & Recovery shown net of sequestration

- Actual and estimated obligations, by year for Forest Ecosystem Health & Recovery are found in President's Budget Appendix under the BLM section

- USFS Forest Pest Control amounts are shown as estimated transfers. More information on USFS Forest Pest Control is found in the U.S. Forest Service budget Justifications. USFS Forest Pest Control is used on both Oregon and California Grant Lands

### Justification of 2016 Program Changes

The 2016 budget request for the Public Domain (PD) Forestry Management Program is \$9,980,000 and 72 FTE and reflects an internal transfer of -\$38,000.

**Transfer to National Conservation Lands (-\$38,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$38,000 will be transferred from Public Domain Forest Management. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

## Program Overview

### Program Components

The PD Forest Management Program manages and conserves 58 million acres of forests in 12 western States, including Alaska. The PD Forests have broad uses and serve the public, both directly and indirectly. Forests store and filter water for aquifers and reservoirs; offer opportunities for recreation; provide habitat for thousands of species; support timber and other jobs; provide millions of board feet of lumber and thousands of tons of biomass for alternative energy. Maintaining resilient forests and woodlands also plays an important role in carbon sequestration and providing clean air. According to the Department of the Interior's 2013 Economic Impact Report, timber harvested from PD forests supported \$156 million in economic activity, and biomass from BLM forests has become part of the feedstock that meets various State and Federal renewable energy portfolio standards.

In coordination with other vegetation management programs, the PD Forest Management Program seeks large landscape approaches to managing land resources. The program maintains and improves the resilience of forest and woodland ecosystems. Density management through timber sales and stewardship contracts is essential to maintaining resilient forests. The program also administers various requirements of the Department of the Interior such as regulation, accounting and record keeping, volume estimation, appraisal, and permitting of vegetative materials under the Materials Act of 1947.

Healthy, resilient forests provide habitat for a variety of flora and fauna, including whitebark pine, an Endangered Species Act (ESA) candidate currently classified as "warranted, but precluded." Maintaining healthy and productive forests requires active management. A century of wildfire suppression has left forests choked with fuels that contribute to costly, catastrophic fires, while changing climate and drought reduces the resiliency of the forests and leaves the trees vulnerable to damage from insects and disease.

The BLM leverages Forest Ecosystem Health and Recovery funding, USDA Forest Health Protection funding, and stewardship authority to maximize program accomplishments. The program also coordinates with the Wildland Fire Management Program to leverage funds for hazardous fuels reduction projects.

### Critical Factors

Critical factors affecting the Public Domain Forest Management program include:

- Approximately 14 million acres (or 24 percent) of PD forests are overstocked and at increased risk of insect and disease attacks and catastrophic wildfire. Prime among these risks are the mountain pine beetle and the spruce budworm, which are currently killing intermountain pine and fir on BLM forestlands. In addition, an invasive fungus, white pine blister rust, has infiltrated the colder altitudes where whitebark pine thrives. The U.S. Fish and Wildlife Service (FWS) judges that these factors, along with fire and warming climate, undermine species' viability and may cause the whitebark pine to disappear within two to three generations. Other high elevation species such as limber pine and bristlecone pine are likely to face similar threats soon.

- The capacity of BLM foresters to plan and implement treatments on the ground to take advantage of the increase in demand for wood products as economic conditions are improving, sawmills are reopening, and bioenergy facilities are coming online is critical to increasing forest resilience. Since most forest health and restoration treatments are accomplished through the sale of timber and by-products resulting from the treatments, purchasers of forest product raw materials decrease the BLM's cost of conducting treatments and restoration on a per acre basis.
- Maintaining support and supply to local industry infrastructure is critical to accomplishing necessary forest management treatments over the long term.
- Energy prices and high unemployment rates increase the demand for firewood in rural areas, leading to significant increases in illegal taking of woodland resources. For example, in Cuba, New Mexico, thousands of local individuals, including many Native Americans, use pinyon-juniper forests for cooking and heating their homes, cutting trees with a legal permit. Demand for firewood recently increased, perhaps due to economic hardship and rising propane prices. As a result, illegal woodcutting occurred in areas popular for hiking and valued for scenic and resource values. BLM New Mexico foresters quickly moved to develop more legal firewood areas to meet local demand; inventory stolen trees for timber theft reports and citations; patrol both legal firewood areas as well as areas of illegal woodcutting; and conduct community outreach and educational meetings. As a result, Farmington and Rio Puerco Field Office Law Enforcement Rangers have seen a decline in illegal woodcutting.
- Collaborating with local communities and partners is critical to implementing successful forest conservation projects that support rural economies and provide outstanding customer service.
- Biomass from BLM forest and woodland projects has become part of the feedstock that energy companies are relying on to meet various State and Federal renewable energy portfolio standards.

#### **Drought, Wildfire, and Forests**

Extreme drought and drought-fueled wildfires plagued much of the West over the past decade, impacting forest health and local economies. In 2014, fire impacted over 123,000 acres of BLM forest. Over 1.7 million acres of forest mortality exists due to bark beetles and insect attack. Many of these acres are salvageable for timber, which clears the way for reforestation.

#### **Means and Strategies**

The BLM coordinates the strategies of PD Forest Management with other BLM programs and partner organizations to achieve integrated vegetation management at the landscape level using a corporate approach to managing ecosystem functions and services by emphasizing shared on-the-ground vegetation goals across programs, processes, and scales.

The BLM integrated the national-level coordination of vegetative management, including forestry, rangeland management, riparian management, plant conservation, invasive weeds, and fire rehabilitation into a cohesive team that leverages resources to make policy development more collaborative at a landscape scale. In this coordinated effort, the BLM is addressing forest management critical factors through multiple activities, including using results from the BLM's Rapid Ecoregional Assessment process to identify focal areas for forest management activities at the ecoregional scale.

The PD Forest Management Program achieves land use goals by:

- Implementing science-based forest restoration projects to improve forest health and resilience, which increases resistance to wildfires, disease, drought, invasive pests, and climate change at the landscape scale;
- Sustainably harvesting and regenerating forests and woodlands to produce a continuous supply of wood products and renewable energy feedstocks;
- Salvaging dead and dying timber to promote forest health and reduce hazardous fuels, in balance with the need for wildlife habitat, watershed function, and soil stability, while supporting local economies;
- Providing the public with commercial and personal use opportunities to harvest products such as firewood, Christmas trees, boughs, greenery, medicinal plants, fence posts, and pinyon pine nuts from forests and woodlands. In 2014, over 20,000 firewood permits, with a market value of over \$15 million, were sold that continue to provide a renewable energy source for heating thousands of households in rural communities;
- Inventorying 58 million acres of forest resources through a national database;
- Utilizing the Good Neighbor authority to achieve forest health treatments on a landscape level across BLM, State, and private lands to increase forest resiliency;
- Utilizing stewardship contracting authority, a vital tool for forest and woodland conservation. From 2008 - 2014, Stewardship contracting offered approximately 85 MMBF from Public Domain (PD) land, which is 25 percent of the total volume offered in the PD over that period. Stewardship contracting is also an effective tool for increasing biomass utilization. During the same period, the BLM offered 493,000 tons of biomass through Stewardship contracts. These volumes are essentially by-products of forest health treatments implemented through Stewardship contracts with acreage totaling over 85,000 acres.
- Collaborating with conservation districts to implement forest restoration, support rural economies, and meet multiple use objectives. For example, in Weaverville, California the BLM and Trinity County Conservation District are expanding a community forest. Through a stewardship agreement, the BLM works with the community to manage the forest, including reducing hazardous fuels, providing timber to meet local industry needs, preserving the scenic view from downtown Weaverville, maintaining and building recreational trails, using the forest as an outdoor classroom, and protecting cultural and historical resources.
- Engaging, employing, and educating youth, Native Americans, and veterans in forestry. In 2014, students, interns, and volunteer youth completed over \$2.0 million worth of forestry project work; foresters in Alaska and Montana conducted field camps for Native American youth, while in New Mexico, youth from the Ramah Navajo Chapter worked to thin forests and plant trees; and in Colorado and New Mexico, veterans crews completed pre-commercial thinning, hazard tree felling, and patrolling firewood cutting areas.
- Implementing stewardship agreements which exchange harvested forest products for the forest health treatments and use matching funds to treat greater acreage;
- Expediting NEPA processes to accelerate the removal of beetle-killed timber to reduce the risk of catastrophic fire and minimize risks to the recreating public. In 2014, two field offices in Colorado launched a pilot project to contract out the NEPA and cultural surveys so that the work will be completed in 2015.
- Investing in new technology to improve efficiencies. In 2015, the forestry program is consolidating national forestry applications into one system and is developing a national forest inventory platform; using mobile data collectors to collect inventory, cruising, and scaling data and uploading it directly into databases, eliminating the need to manually

- enter data into spreadsheets; and combining accounting systems with timber sale systems to eliminate duplicate data entry.
- Supporting renewable energy goals by promoting the direct conversion and use of woody biomass for energy within BLM-owned facilities, as a part of an interagency bioenergy facility initiative;
- Requiring that all measurable biomass by-products from forest treatments such as timber sales, stewardship contracts, and hazardous fuels reduction are offered for utilization when ecologically appropriate and where biomass markets exist; and
- Implementing the Biomass Crop Assistance Program with the Farm Services Agency to allow for matching payments towards delivery of biomass to bioenergy facilities.

### 2016 Program Performance

The BLM will accomplish program performance through sales and stewardship contracts to achieve desired future conditions on the 58 million acres of forests and woodlands in the public domain, offering economic benefits for the present and managing forest health for the future.

In 2016, the PD Forest Management program will address several DOI strategic and Bureau plan performance measures:

- Forest and woodland areas are assessed and monitored to direct management actions to areas not meeting desired conditions. Data collected during forest and woodland assessment and monitoring are used as one component in determining the Bureau plan measures “Percent of DOI acres that have achieved desired conditions where condition is known and as specified in management plans” and “Number of DOI acres restored to the condition specified in management plans.” Annual increases in forest and woodland acreages continue to contribute to achievement of these performance measures.
- The BLM will continue to use timber sales to achieve desired future conditions of forest stands to meet the Strategic Plan measure “Volume of Wood Products Offered.” Similarly, to the extent possible, the BLM will use forest product sales and permits to achieve desired future conditions of forest and woodland stands by offering wood products as biomass, a Bureau plan measure.
- BLM Montana is a partner in the Nature Conservancy-organized Centennial Fire Learning Network in Montana. Its primary goal is to advance landscape-scale fire restoration in the western portion of the Greater Yellowstone Ecosystem and the High Divide region through focused multi-agency projects, sharing of lessons learned and the use of rigorous science to guide managers. The Dillon Field Office forestry and fuels programs worked together to successfully complete several large-scale forest restoration treatments targeting old-growth Douglas-fir savannahs and are working on several ongoing aspen enhancement projects, managing for healthy, resilient forests. Scientists from Federal and State land management agencies, Beaverhead County, University of Montana-Western, University of New Mexico, the Greater Yellowstone Coalition, Montana Logging Association and The Nature Conservancy toured BLM project sites and agreed that the projects are soundly based in science, and serve as a model for forest management in similar ecosystems.

**Pocatello, Idaho Team Salvages Wood from the State Fire and Restores Ecosystems**

When the smoke cleared in August of 2013, the State Fire had burned more than 30,000 acres in both Utah and Idaho. The disturbance of such a large area has implications on a variety of resources from soil erosion, invasive weed spread to loss of wildlife habitat. An interdisciplinary team of resource specialists worked quickly to design and implement a project in 2014 - 2015 to salvage 913 MBF of timber using existing roads; enhance soil stabilization; stimulate aspen regeneration for elk, deer, and grouse; create migratory bird and raptor habitat; increase economic opportunities for the local area; designate firewood harvesting areas for residents; plant trees and aerially seed sage brush.

Pocatello Field Office's Interdisciplinary team headed to the State fire to conduct an on the ground tour to discuss post fire management tactics.

## Activity: Land Resources

### Subactivity: Riparian Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Riparian Management	\$000	21,321	21,321	+324	-201	+1,340	22,784	+1,463
	FTE	159	159		+0	+2	161	+2

Summary of 2016 Program Changes/Internal Transfers for Riparian Management:		(\$000)	FTE
Enhance Core Capability		+1,340	+2
Internal Transfer to National Conservation Lands		-201	+0
<b>Total</b>		<b>+1,139</b>	<b>+2</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Riparian Management Program is \$22,784,000 and 161 FTE, and reflects an internal transfer of -\$201,000 and a program change of +\$1,139,000 and +2 FTE from the 2015 enacted level.

**Enhance Core Capability (+\$1,139,000/+2 FTE)** – The 2016 budget request includes a \$1.3 million increase to strengthen BLM’s core capability to pursue a landscape approach to managing BLM vegetation resources, including managing over 150,000 miles of riparian areas and nearly 13 million acres of wetlands. Increased funding will be used to treat acres not meeting land health standards in sage-grouse habitat and to identify and prioritize management and restoration efforts and to support BLM management decisions. Increased funding will also be used for monitoring and assessment of drought conditions with a goal of improving the quality and quantity of water for wildlife.

**Transfer to National Monuments & National Conservation Areas (NM&NCAs) (-\$201,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$201,000 will be transferred from Riparian Management. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

### Program Overview

#### Program Components

Riparian-wetland areas are important components in every landscape type. In the arid West, these moist, green areas are especially critical to sustaining ecosystem functions and services, providing terrestrial and aquatic wildlife habitat, reducing erosion, improving water quality, and

providing recreational opportunities. Although they are a small component of landscapes in the West, the diversity of uses and functions of riparian-wetland resources and their geographical position on the landscape make these areas indicators of overall ecosystem function.

Healthy riparian areas play a prominent role in the Bureau's ability to maintain working landscapes on public lands while managing for sage-grouse populations by providing shelter from predators and supplying the critical foods necessary for the species' survival. Highly functioning riparian areas can also help prevent the spread of wildfires. The BLM's Riparian Management Program provides the framework for managing over 150,000 miles of riparian areas and nearly 13 million acres of wetlands. In coordination with the other BLM programs, the Riparian Management Program pursues a landscape approach to managing BLM vegetation resources.

### **Critical Factors**

A number of external factors impact the Riparian Management Program, including:

- A changing climatic regime resulting in more frequent and severe floods and extended droughts, and requiring aggressive adaptive management strategies.
- Growing demands upon water resources and impacts from land-use changes, which increase monitoring workloads and necessitate adaptive management strategies.
- Development of public lands as part of the Powering Our Future initiative, requiring mitigation efforts to offset water discharge, water pollution, and water loss.
- Spread of invasive terrestrial and aquatic species, such as tamarisk and quagga mussel, requiring additional monitoring and treatment to prevent degradation of functioning ecosystems and native plant and animal communities.
- Increasing urgency to restore and protect habitats as the number of sensitive and special status species grows. Many of these species, including sage-grouse, southwest willow flycatcher, cutthroat trout, bullhead trout, and numerous plant species have a critical nexus with riparian resources.
- Urban growth and increasing public use of riparian-wetland areas, requiring additional monitoring to detect degradation from trails, transportation routes, and visitor use activities and to prioritize restoration activities.
- Catastrophic wildfires that negatively impact riparian resources, increasing the workload associated with stabilizing and rehabilitating burned areas and monitoring treatment success, land condition, and trends.

### **Means and Strategies**

To better achieve program goals and provide improved management of public lands, the BLM has adopted a corporate approach to managing ecosystem functions and services by emphasizing shared on-the-ground vegetation goals across programs, processes, and scales. In this coordinated effort, the Riparian Management Program is addressing critical factors through multiple activities, including:

- Incorporating Rapid Ecoregional Assessment information, where appropriate, into riparian-wetland planning and management activities;
- Implementing riparian restoration in high-priority focal areas using step-down strategies developed from the BLM's Landscape Approach for Managing Public Lands;

- Conducting qualitative Proper Functioning Condition Assessments and collecting quantitative core aquatic and terrestrial indicator data per the Assessment, Inventory and Monitoring (AIM) Strategy in coordination with land health assessments on a watershed or landscape-scale basis
- Supplementing AIM data with critical program data through multiple indicator monitoring to begin devising a quantitative, statistically-robust methodology for landscape-scale riparian monitoring;
- Prioritizing riparian treatments in areas functionally at-risk (especially those with high resource values), in order to protect sage-grouse and ecologically important plant and animal communities;
- Coordinating with the Fisheries Management and Soil, Water & Air Management Programs to devise cross-cutting, watershed-scale strategies and policies that will address water resource impacts from drought, development, and other stressors;
- Completing on-the-ground restoration projects using funds provided by the Clean Water and Watershed Restoration Act;
- Educating youth about the importance and complexity of riparian-wetland resources;
- Capturing legacy and new assessment and AIM monitoring data into a national geospatial dataset in order to more efficiently analyze and report on the conditions and trends of riparian resources;
- Coordinating with other BLM programs to build a land-treatments national geospatial dataset to document the location and effectiveness of treatments on the landscape;
- Using the interagency Creeks and Communities Strategy to cooperate with diverse stakeholders across jurisdictional boundaries and to provide training and coaching to the field; and
- Leveraging Riparian Management Program funds with funds from other Federal, State, and local agencies and NGOs to implement on-the-ground projects.

### **2016 Program Performance**

In 2016, the Riparian Management Program will continue to improve land and water health through ongoing management of wetlands and riparian areas. Program activities will contribute to three DOI performance measures:

- Assessment and monitoring of riparian areas are crucial activities of the Program, directing management actions to those areas not meeting desired conditions as part of an adaptive management strategy. The DOI Strategic Plan measures the percentage of DOI riparian (stream/shoreline) miles that have achieved desired condition.
- Similar to riparian areas, wetland areas also are assessed and monitored in order to direct management actions to areas not meeting desired conditions. Data collected during wetland assessment and monitoring are used to measure the percentage of DOI acres that have achieved desired conditions where condition is known and as specified in management plans.
- On-the-ground restoration and management activities conducted by the program contribute directly to the improvement of degraded riparian areas. These actions are essential to meeting the Department's performance measure concerning the number of DOI riparian (stream/shoreline) miles restored to the condition specified in management plans. In 2016, the Program will restore approximately 250 miles of riparian area.

This page intentionally left blank.

## Activity: Land Resources

### Subactivity: Cultural Resources Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Cultural Resources Management	\$000	15,131	15,131	+274	-199	+2,000	17,206	+2,075
	FTE	116	116		+0	+0	116	+0

Summary of 2016 Program Changes/Internal Transfers for Cultural Resources Management:		(\$000)	FTE
Safeguarding Our Irreplaceable Heritage		+2,000	+0
Internal Transfer to National Conservation Lands		-199	+0
<b>Total</b>		<b>+1,801</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Cultural Resources Management Program is \$17,206,000 and 116 FTE. This reflects a program change of +\$2,000,000 and 0 FTE and an internal transfer of -\$199,000 and 0 FTE from the FY 2015 enacted level.

**Safeguarding Our Irreplaceable Heritage (+\$2,000,000/0 FTE)** – The 2016 budget request includes a program increase of \$2.0 million to enhance the BLM's capacity to manage unique, irreplaceable heritage resources. The program will conduct up to 60 additional localized on-the-ground inventories of sensitive areas, and site protection and stabilization projects for priority sites vulnerable to the effects of climate change (e.g. fire, erosion, water levels) and unauthorized activities. Projects will also focus on updating regional overviews and further implementing predictive modeling and data analysis to enhance the bureau's ability to address large-scale, cross-jurisdictional land-use.

**Transfer to National Conservation Lands (NM&NCAs) (-\$199,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$199,000 will be transferred from Cultural Resources Management. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

## Program Overview

The BLM is responsible for the largest, most diverse and scientifically important aggregation of cultural, historical, and paleontological resources on the public lands, as well as the museum collections and data associated with these heritage resources. These cultural resources represent all major periods, events, and communities in the broad sweep of human habitation in the West over a 10,000 year period.

These heritage resources are managed to ensure the cultural, educational, aesthetic, inspirational, and scientific values are preserved, and the recreational and economic benefits are realized for today's communities as well as future generations in compliance with Federal laws and regulations.

### The BLM's heritage resources include:

- 366,232 recorded cultural properties
- 3,156 cultural properties protected
- 108 historic properties listed on the National Register, 2,167 contributing properties, and 49,734 properties eligible for listing
- 3,965 monitored archaeological sites
- 431 maintained historic structures
- 17,129 recorded paleontological localities
- 10 million documented artifacts and specimens in 158 museums and universities.

The program also provides expertise and capabilities to facilitate compliance with Section 106 of the National Historic Preservation Act (NHPA) required for other BLM programs and land-use proponents to implement proposed actions on the public lands that will effect historic properties, such as energy development, recreation, grazing, and other planned activities. Up to 13,000 land-use proposals are reviewed annually for potential effects to historic properties. Compliance costs are to be funded by the benefitting subactivity program or the proponent. The tools and processes developed by the Cultural Resources Management Program streamline the compliance process, providing significant cost-savings and efficiencies.

The program:

- Manages and protects archaeological sites and historic properties as directed by the Archaeological Resources Protection Act (ARPA) and NHPA, including inventorying the public lands for cultural resources, stabilizing and monitoring sites.
- Manages and protects paleontological localities and implements the Paleontological Resources Preservation subtitle of the Omnibus Public Lands Act of 2009 (PRPA), including inventorying the public lands for fossils, and stabilizing and monitoring localities.
- Curates the 10 million documented artifacts, specimens, and associated records in the BLM's three museum facilities and in coordination with the 155 State, tribal, and non-profit partner museums and universities.
- Facilitates Government-to-Government consultation with Indian Tribes and Alaska Native Governments concerning traditional tribal activities and places of special meaning on the public lands, such as sacred sites and places of religious significance.

### Inventory and Protection Projects

Most heritage projects are accomplished in partnership with regional and local universities and community groups, enabling the agency to leverage funds with matching partner resources. Recent reductions in funding have made maintaining partnerships difficult or stalled ongoing projects, as well as resulted in decreases in core performance metrics for inventory, monitoring, stabilization, and study of priority heritage resources, as well as collections management and repatriation responsibilities.

- Complies with the Native American Graves Protection and Repatriation Act (NAGPRA) to inventory and repatriate Native American human remains and cultural items held in collections and respond to new discoveries of such on the public lands.
- Develops and implements educational and interpretative opportunities for the public to engage with cultural and paleontological resources.
- Facilitates academic and scientific research on cultural and paleontological resources to enhance scientific understanding and support decision-making.

### Critical Factors

The program faces a broad range of challenges and critical factors, including:

- Increased development of energy resources and transmission facilities, and opportunities for regional mitigation challenge the BLM to compile and synthesize data at a broad scale and provide efficient and effective NHPA Section 106 compliance.
- Theft, destruction, and vandalism of heritage resources as a result of increased accessibility of once-remote public lands, and urban and suburban encroachment.
- Enhanced protection of paleontological resources under the new statutory mandates for the management, preservation, and protection of fossils under PRPA.
- Inventoring Native American cultural items held in museum collections and consulting with Indian Tribes to determine disposition leading toward repatriation as highlighted by a 2010 audit of NAGPRA compliance by the Government Accountability Office.
- Identifying and curating artifacts and specimens recovered from the public lands, upgrading preservation and documentation for accountability, ensuring access and use for research and public benefit, and enhancing partnerships with repositories that curate BLM collections.

### Means and Strategies

The program prioritizes proactive management and achieves efficiencies for NHPA Section 106 compliance by:

- Creating efficiencies in NHPA Section 106 compliance requirements by streamlining the review process for other BLM programs and land-use proponents.
- Enhancing tribal participation in decision-making processes through Government-to-Government consultation with Indian Tribes and Native Alaska villages and corporations, and drafting a new tribal consultation and coordination manual and handbook that addresses

#### NHPA Section 106 Casework

Section 106 of the NHPA requires the BLM to take into account the effects of its actions on historic properties and provide the Advisory Council on Historic Preservation (ACHP) with a reasonable opportunity to comment. Annually, the BLM reviews up to 13,000 land use proposals for their potential effect on properties listed on, or eligible for listing on, the National Register of Historic Places. The BLM's national Programmatic Agreement with the ACHP and National Conference of State Historic Preservation Officers is the primary mechanism for achieving cost efficiencies and flexibility in the NHPA Section 106 review process.

#### Regional Cultural Resource Overviews

The landscape approach and the large-scale projects planned on the public lands necessitates that the BLM maintains high-level, comprehensive, regional overviews that synthesize available information and analysis at a broad scale. The BLM has the tools and processes for meeting this need and will complete or update overviews in key areas. These inventory overviews help identify cultural resources on the ground, inform sampling strategies and predictive modeling, identify areas where cultural resource conflict may occur, and provide a framework for National Register evaluations. They are meant to significantly reduce the cost of subsequent projects or planning efforts.

government-to-government tribal consultation across all BLM programs.

- Incorporating the BLM's landscape approach to public land management to address landscape-scale concerns associated with the inventory, assessment, mitigation and monitoring of heritage resources.
- Maintaining active working relations with State Historic Preservation Offices as part of the BLM's Cultural Resources Data Sharing Partnership in order to share costs to automate and digitize site records, and to analyze this information for use in planning and expediting review of land use undertakings as part of NHPA Section 106 compliance at a significant cost savings for the bureau and proponents.
- Supporting Law Enforcement efforts to curb criminal acts prohibited by ARPA, NAGPRA, PRPA and other Federal statutes protecting cultural and paleontological resources.
- Partnering with universities, museums, and other scientific organizations to leverage public/private investments.
- Creating volunteer and youth experiences for community-based conservation and educational activities, and entry-to-journeyman-level opportunities, as seasonal hires, utilizing students and recent graduates.

### **2016 Program Performance**

In 2016, the primary performance program goals for the condition of Archaeological Sites, Historic Structures, and Museum Collections will be to maintain minimum benchmarks for proactive management of heritage resources, focusing on the highest priority, most vulnerable resources. The program will also continue to support agreements and protocols that facilitate streamlined NHPA Section 106 casework in support of priority planned activities on BLM-managed lands, and advising on fostering effective Government-to-Government relationships with Indian Tribes.

## Activity: Land Resources

### Subactivity: Wild Horse and Burro Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Wild Horse & Burro Management	\$000	77,245	77,245	+327	-10	+2,993	80,555	+3,310
	FTE	172	172		+0	+0	172	+0

Summary of 2016 Program Changes/Internal Transfers for Wild Horse & Burro Management:	(\$000)	FTE
Applied Science - Implementation of NAS Recommendations	+2,993	+0
Internal Transfer to National Conservation Lands	-10	+0
<b>Total</b>	<b>+2,983</b>	<b>+0</b>

Other Resources Supporting Wild Horse & Burro Mgmt:					
		2014 Actual	2015 Estimate	2016 Estimate	Change from 2015
USFS Wild Horses	\$000	1,185	1,200	1,200	+0
	FTE	0	0	0	+0
Adopt-A-Horse Program	\$000	332	380	380	+0
	FTE	0	0	0	+0

**Notes:**

- USFS Wild Horses amounts are shown as estimated transfers reported by the U.S. Forest Service in its 2015 Budget Justification (March 2014); the annual Interior, Environment, and Related Agencies Appropriation Act appropriates these funds in the U.S. Forest Service National Forest System appropriation; Public Law 113-76 authorizes the transfer of these funds in 2014

- Adopt-A-Horse Program amounts are shown as new budget authority derived from a minimum \$125 per horse or burro fee under a competitive bidding process for adoption of animals gathered from the public lands, conducted under The Wild Free-Roaming Horse and Burro Act of 1971, as amended by the Public Rangelands Improvement Act of 1978 (16 USC 1331-1340); the annual Interior, Environment, and Related Agencies Appropriation Act appropriates these funds on a current basis. More information on Adopt-A-Horse Program is found in the Service Charges, Deposits, & Forfeitures chapter

- Actual and estimated obligations, by year for Adopt-A-Horse Program are found in President's Budget Appendix under the BLM section

### Justification of 2016 Program Changes

The 2016 budget request for the Wild Horse and Burro (WHB) Management Program is \$80,555,000 and 172 FTE. It reflects a program change of +\$2,993,000 and 0 FTE and an internal transfer of - \$10,000 and 0 FTE from the 2015 enacted level.

**Implementation of National Academy of Sciences (NAS) Recommendations (+\$2,993,000/0 FTE)** – The program increase will be used to continue ongoing multi-year research studies that focus on the development of more effective and longer lasting population growth suppression methods, including sterilization; conduct population inventories using recommended survey methods; continue the programmatic environmental impact statement initiated in 2015; engage in genetic diversity monitoring; continue development of a robust population model; continue sentinel population studies; and apply the most effective, available

population growth suppression methods to on-range animals. The BLM will continue to develop a scientific foundation that will be the basis for an ecologically and financially sustainable Wild Horse and Burro Program.

**Transfer to National Conservation Lands (-\$10,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$10,000 will be transferred from the WHB Management Program. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

## Program Overview

### Program Components

The WHB Program is responsible for managing wild horses and burros in accordance with the *Wild Free-Roaming Horses and Burros Act of 1971*. The Act requires the protection, management, and control of wild free-roaming horses and burros in a manner designed to achieve and maintain a thriving natural ecological balance in combination with other public land uses. The program components that support this effort include maintaining an accurate current population inventory; establishing and maintaining appropriate management levels (AML); determining whether AMLs should be achieved by removal, population growth suppression or other methods such as sterilization; training animals to increase adoptions, adoption and sales; and conducting research to develop sound science for the management of wild horses and burros.

The BLM manages more than 46,000 wild horses and burros on 26.9 million acres of public lands. The program is also responsible for monitoring herd and rangeland health and caring for approximately 50,000 animals in off-range holding facilities.

### Elements for Reforming and Managing the Wild Horse and Burro Program

The BLM remains committed to reforming the program and will continue population growth suppression research and the implementation of key recommendations of the June 2013 National Academy of Science report. The following are key elements of this reform:

- **Reducing Holding Costs.** The BLM will continue efforts to acquire additional, less expensive holding facilities and partnership eco-sanctuaries to reduce holding costs for wild horses removed from public rangelands. The bureau will also continue innovative partnerships that increase the number of trained animals for placement in private care.
- **Continuing Research (NAS Recommended).** The BLM will continue laboratory, pen and field studies to develop more effective population growth suppression methods for contraception and permanent sterilization methods such as spay and neuter; continue to assess public knowledge, attitudes, preferences and values of wild horse and burro populations and management; and evaluate demand for wild horses and burros by adoptees and long-term sanctuary providers.

- **Continue Programmatic Environmental Impact Statement (PEIS).** The PEIS, a three-year project initiated in fiscal year 2015, is necessary to implement and evaluate new approaches to wild horse and burro management, population growth suppression and establish a national framework for management and the implementation of a number of NAS recommendations. It will analyze aggressive use of new and traditional population growth suppression methods, including sterilization; management of herds as meta-populations; consider whether or not to maintain all HMAs; evaluate the establishment of non-reproducing or minimally reproducing herds; assess cumulative impacts; and amend land use plans to enhance BLM's ability to effectively manage populations on the range.
- **Developing Herd Management Area (HMA) Sustainability Plans.** The BLM will continue to develop herd management area sustainability plans in the highest priority areas. Each sustainability plan would define a management prescription for appropriate population growth suppression methods and the maintenance of AML.
- **Conducting Population Surveys (NAS Recommended).** The BLM will continue to conduct surveys utilizing the methods developed by U.S. Geological Survey (USGS) to acquire more accurate population estimates.
- **Reducing Population Growth (NAS Recommended).** The BLM will continue applying the most effective population growth suppression methods that are supported by sound science.
- **Strengthening Humane Animal Care and Handling Practices.** The BLM will continue appropriate policy administration and oversight to strengthen humane animal care and handling practices. The BLM will continue to refine a Comprehensive Animal Welfare Program that establishes program-wide standard operating procedures; creates universal training requirements; and institutes a Care and Welfare Assessment Tool. This auditing system will help the BLM identify areas of emphasis for future training and ensure humane treatment of wild horses and burros.
- **Promoting Volunteerism in the Management of Wild Horses and Burros.** The BLM is increasing public engagement by enhancing outreach, recruiting local volunteers and organizations to assist in range and herd monitoring and management, and encouraging partnerships to increase ecotourism.
- **Continuing Transparency and Openness.** The BLM has a fundamental commitment to transparency in all facets of the WHB Program. This includes providing public viewing opportunities during gather operations and at holding facilities without compromising the safety of staff, members of the public, or the animals. The BLM is also committed to a proactive public information system that is both accurate and prompt.

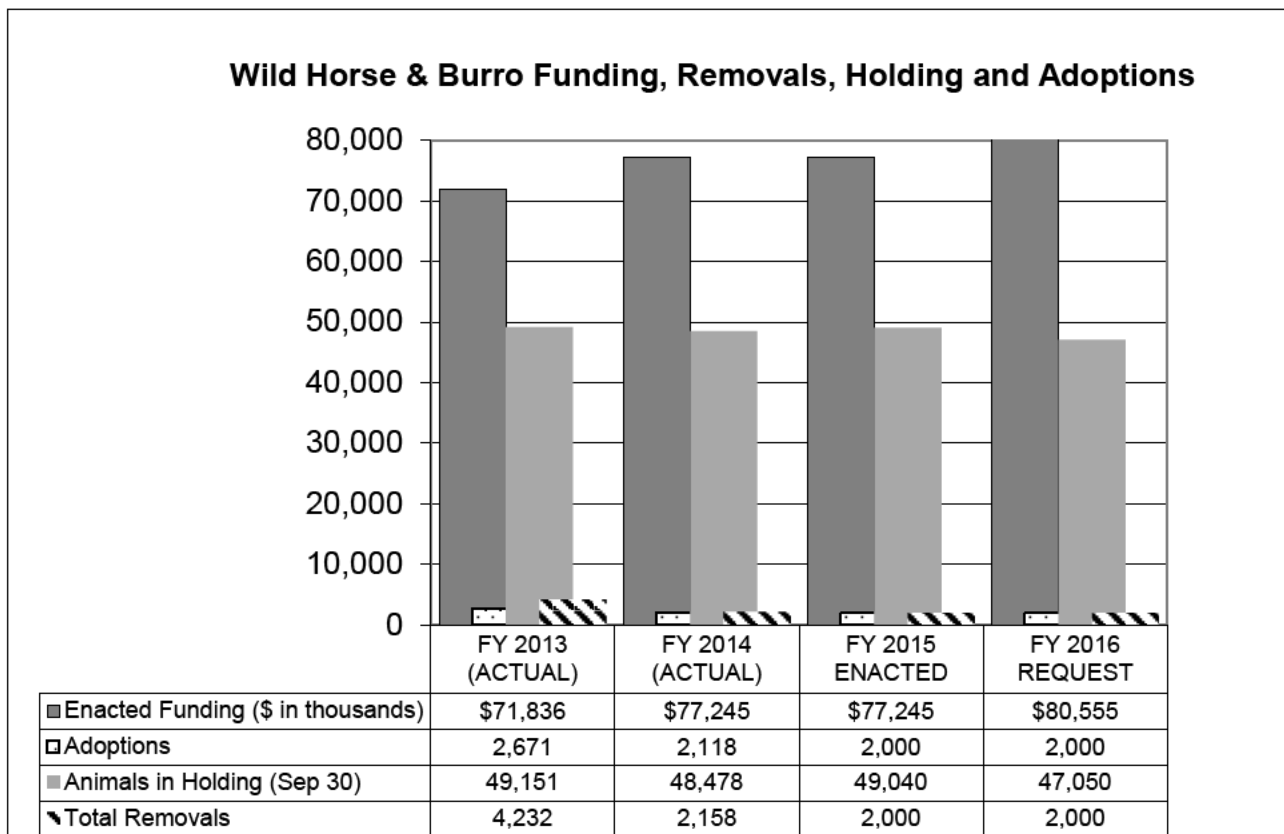

### Critical Factors

Critical factors affecting the efficiency of the WHB Program include:

- Increased fuel, hay, and pasture costs will continue to affect holding costs;
- Wild horses and burros have few natural predators and herds increase at a rate of 15-20 percent each year and double in size every four years;
- Current wild horse and burro populations exceed AML in nearly all HMAs (~93 percent) ;
- Existing contraceptive vaccines are only effective for one year. Vaccine applications on Western herds have multiple logistical challenges due to varying terrain, wildness and the size of both herds and HMAs;
- Adoptions have steadily declined since 2004 which has increased the number of animals in high cost short-term holding;

- Lifetime (estimate of 25 years) care for un-adopted animals in short-term holding is approximately \$46,000 per animal; and
- Public scrutiny of gather and removal methods has increased the visibility of the program. The BLM is experiencing increased litigation, correspondence, *Freedom of Information Act* requests and the need to provide additional personnel at gathers to host public and media visitation, all resulting in added expenses.

In response to these critical factors, the BLM will conduct removals at a substantially reduced level until holding costs can be reduced by maintaining fewer numbers in holding or less expensive capacity such as long-term pastures and partnership eco-sanctuaries are secured. Removals will primarily occur in response to public health and safety (i.e., animals on the highway, in agricultural fields); private land encroachment; and court orders.

*Note: Future removal and holding numbers are estimated as of December 20, 2014.*

### 2016 Program Performance

In 2016, the BLM will remove the same number of wild horses and burros from the range as in 2015 and will continue programmatic and site-specific planning and NEPA analysis to implement non-reproductive herds. The Bureau will also conduct population surveys, continue implementing the comprehensive animal welfare program, and continue partnerships to increase adoptions and reduce short-term holding costs by acquiring less expensive additional long-term holding contracts and eco-sanctuaries

The BLM began partial implementation of the recommendations received from the NAS in 2014. The bureau will continue ongoing multi-year research studies focusing on the development of more effective and longer lasting fertility control agents, techniques for suppressing population growth, and determining their relative efficacy and effects. Population growth suppression research trials began in fiscal year 2015 in designated locations and should continue through 2016. The BLM will continue developing a scientific foundation that will serve as the basis for an ecologically and financially sustainable Wild Horse and Burro Program.

Additional planned performance for 2016 includes:

- Reduce holding costs by transferring animals from short-term facilities to newly acquired, less expensive eco-sanctuaries and long-term holding contracts;
- Continue research to develop contraception and permanent sterilization methods such as spay and neuter, that may include studying the effects on herd genetics, animal behavior and rangeland use;
- Continue land use plan revision, herd management area plan development and NEPA analysis to develop HMA sustainability plans;
- Continue to conduct USGS recommended population surveys to obtain more accurate population estimates;
- Continue applying the most effective population growth suppression methods that are supported by sound science;
- Conduct removals, primarily limiting removals to those needed in response to public health and safety issues (i.e., animals on the highway, in agricultural fields); private land encroachment; and court orders;
- Increase partnerships with non-governmental organizations and correctional institutions to increase the number of trained animals for placement in private care;
- Continue herd management/rangeland health monitoring to support AML evaluation;
- Continue compliance inspections of previously adopted animals;
- Continue to develop and conduct comprehensive animal welfare program training for transportation, short and long term holding and adoption events and audits for gathers; and
- Continue the maintenance of water developments on public lands.

# Wildlife and Fisheries Management

## Activity: Wildlife and Fisheries Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount

*Notes: The Miscellaneous Trust Funds, Wildlife & Fish Conservation and Rehabilitation (Sikes Act) current mandatory appropriation is a collaborative activity of the Wildlife program. The 2014 enacted amount (post-sequester) for Wildlife & Fish Conservation and Rehabilitation (Sikes Act) was \$0.347 million and the 2015 post-sequester amount is \$0.363 million. The 2016 President's budget request for Wildlife & Fish Conservation and Rehabilitation (Sikes Act) is \$0.323 million.*

*More information on these collaborative activities is found in the Miscellaneous Trust Funds chapter.*

### Justification of 2016 Program Changes

The 2016 budget request for the Wildlife and Fisheries Management activity is \$102,066,000 and 355 FTE, and reflects internal transfers of -\$401,000 and 0 FTE and a program change of +\$37,000,000 and +20 FTE above the 2015 enacted level.

### Activity Description

The Wildlife and Fisheries Management activity maintains and restores fish, wildlife, and their habitats by conserving and monitoring habitat conditions, conducting inventories of fish and wildlife resources, and developing cooperative management plans, while providing for environmentally responsible recreation and commercial uses. Funding for this program supports the staff that develops program policy and projects at all levels within the BLM. Management actions emphasize on-the-ground and in-the-water actions that measurably increase the health of fish and wildlife populations to sustain recreational and commercial uses that enhance or maintain many local economies in the West. In addition, these actions reduce the need to Federally list species.

This activity supports Cooperative Landscape Conservation activities and the Healthy Landscapes Program by improving the health of watersheds and sustaining biological communities. The overall goal of Fisheries Management and Wildlife Management programs is to restore and maintain proper functioning conditions in aquatic, riparian, wetland and upland systems managed by the BLM, with the goal of providing suitable conditions for biological communities to flourish.

The lands that the BLM manages include numerous wildlife habitat types across a large proportion of America's western landscapes, including major portions of all American arid

ecosystems, including the sagebrush biome, and portions of the Colorado Plateau. The BLM is also responsible for managing 15 million acres of short and mid-grass prairies and nearly 55 million acres of forest and woodland habitats. This habitat includes 43 million acres of elk habitat and 131 million acres of mule deer habitat. The BLM manages 23 million acres of bighorn sheep habitat which include most of the desert bighorn sheep habitat. In addition, the BLM's diverse land base includes over 117,000 miles of fishable streams and rivers, over three million acres of lakes and reservoirs, and an abundance of wetlands. Because of their isolation, BLM lands include many of America's rarest habitats which support many rare plant and animal communities.

**Activity: Wildlife and Fisheries Management**  
**Subactivity: Wildlife Management**

		2014 Actual	2015 Enacted	2016 President's Budget			Change from 2015	
				Fixed Costs	Transfers	Program Changes		Requested Amount
<b>Wildlife Management</b>	<i>\$000</i>	52,338	52,338	+409	-366	+37,000	89,381	+37,043
	<i>FTE</i>	250	250		+0	+20	270	+20

Summary of 2016 Program Changes/Internal Transfers for Wildlife Management:		(\$000)	FTE
Implementation of Greater Sage-Grouse Conservation			
Plans		+37,000	+20
	Internal Transfer to National Conservation Lands	-366	+0
<b>Total</b>		<b>+36,634</b>	<b>+20</b>

**Justification of 2016 Program Changes**

The 2016 budget request for the Wildlife Management Program is \$89,381,000 and 270 FTE, a program change of +\$37,000,000 and +20 FTE from the 2015 enacted level.

**Implement Sage-Grouse Conservation Plans (+\$37,000,000/+20 FTE) –**

Conservation of the Greater sage-grouse (GSG), and the sage brush habitat which serves over 350 associated plant and animal species, is a high priority for the Administration and the most significant and highly visible example of the Department's efforts to implement the landscape mitigation strategy embodied in Secretarial Order 3303 -- the first Order issued by Secretary Jewell. This approach represents a new paradigm for landscape-level management by the Department and is critical to achieving the Secretary's goal of demonstrating BLM's ability to achieve both conservation and development objectives more efficiently, at less cost, and with greater certainty for all interested stakeholders.

The BLM's GSG conservation strategy requires unprecedented collaboration with other Federal land management agencies in order to address a convergence of multiple land use issues that will arise from the resource management planning process that is currently underway. The BLM is revising or amending 68 Resource Management Plans (RMP) for submission to the U.S. Fish and Wildlife Service for their review as a part of the court-ordered timeline for determining if the GSG should be listed as threatened or endangered under the Endangered Species Act. The BLM's plan revisions and amendments affect 11 States and, when implemented, will require

significant changes in how the BLM manages public lands across the western United States and accelerate transition to landscape-scale management.

For example, as part of the RMP revision/amendment process for the GSG, in order to minimize disturbance to priority habitat areas for the GSG, the BLM is assessing the need to redirect fluid minerals development to lands outside of priority conservation areas. The BLM may need to institute closures and require that new development be designed to limit or eliminate surface disturbance in priority conservation areas, requiring extensive work with current and future lease holders across millions of acres of priority GSG habitat. For existing and new development, compensatory mitigation measures would be required to ensure that no unmitigated habitat loss occurs as a result of development. New methods to monitor and evaluate the success of these measures will be necessary in order to ensure compliance for conservation of the GSG.

For range management, new standards are being considered to meet GSG habitat needs during critical periods in the GSG lifecycle. Rearing and brooding areas and winter habitats will need to be maintained and restored to ensure greater GSG reproductive success and survival. To achieve these outcomes, the BLM will need to significantly improve monitoring of grazing allotments and enforcement of range management standards and initiate new rangeland habitat restoration efforts.

Fire is widely recognized as the greatest threat to GSG survival in the Great Basin States. In keeping with the Department's emphasis on preventing and suppressing fire on the range, as described in Secretarial Order 3336, the BLM has implemented new policies to prioritize fire suppression to stem GSG habitat loss. Extensive efforts will be required to work with the States, private landowners, and rural communities to develop the capacity to prevent fires through improved noxious weed control, establishing and maintaining fire breaks, training landowners in fire prevention and suppression techniques, and developing a network of rural fire assistance programs to train and equip local volunteers to aid in minimizing future GSG habitat loss due to fire across Nevada, Oregon, Idaho, Utah and other western States. Finally, more work is needed to assess and prioritize areas where post-fire habitat restoration is likely to be successful and to implement measures to restore millions of acres of habitat lost due to fire.

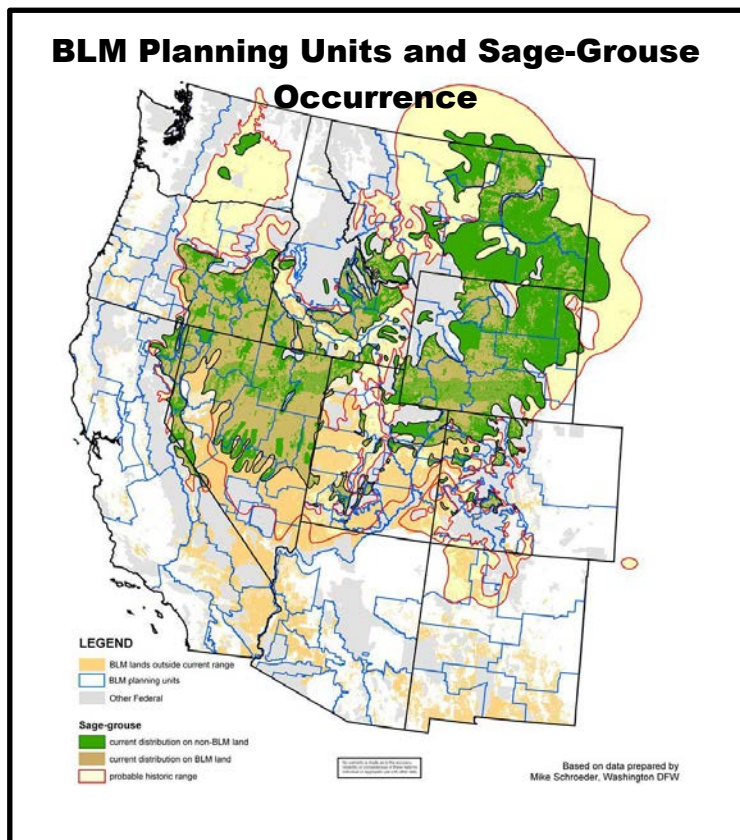

The RMP revisions/amendments underway describe habitat restoration needs for more than 27 priority areas across the geographic range of the GSG to remediate damage to the native plant communities used by sage-grouse, thereby increasing their ability to support a healthy, sustainable population of this important bird species.

Through the combination of the efforts at the requested funding level, a scale of habitat management achieved would accomplish large scale regional restoration and connectivity at the highest levels of both the Great Basin and the Rocky Mountain regions. At this requested funding level, the BLM will increase its highly skilled workforce that can respond to short and long term needs to manage sagebrush systems that support not only the GSG but many other species of concern including birds, mammals, reptiles, amphibians, fish, and plants in the range of the GSG.

The BLM's habitat restoration and management activities will be closely coordinated with those of Federal, State and local partners operating within each of the sage-grouse management zones established by the Western Association of Fish and Wildlife Agencies. This coordination is essential to the success of the Greater sage-grouse Comprehensive Conservation Strategy. Funding will support critical habitat restoration activities on BLM-managed lands including:

Completing extensive land treatments, including the removal of encroaching conifers, eradication and control of invasive weeds, and augmenting post-wildfire emergency stabilization and rehabilitation efforts by reseeding and replanting with locally-sourced native plant materials on approximately 367,000 acres;

- Restoring and managing riparian areas across the entire GSG range;
- Conducting prescribed burns, fence markings and sagebrush thinning;
- Conducting an inventory of an additional 247,000 acres for the presence of invasive plants and noxious weeds, providing information for restoration efforts that would restore or connect more than two million additional acres to quality GSG habitat;
- Completing travel management plans to facilitate the restoration of priority habitat.

Land treatments completed with this funding will allow for not only improved habitat on nearly 400,000 acres, but also provide connectivity across more than 2 million acres of land with GSG habitat (both private and public domain). The proposed funding will also comprehensively address other tools and information gaps to support conservation actions. These include the following: radio telemetry studies, noise studies, predator research, and augmentation/relocation projects. Many of these will be conducted in partnership with other Federal agencies, State agencies and non-government partners.

In conjunction with other programmatic changes in rangeland management, oil and gas development, and wildfire management, the restoration of habitats on BLM-managed lands will play a major role in conserving the GSG for future generations. Preparation, training, and implementation for all these measures, and others, must be fully underway in fiscal year 2016 if the GSG Conservation Initiative is to be successful. Funding, as proposed, will provide additional certainty with the FWS that the BLM has the resources necessary to ensure that the required conservation measures for the GSG can and will be implemented. Should a listing occur, the BLM would be required to implement many of these same measures in conjunction with each development project within the remaining GSG range to ensure that the BLM's continued management of the public lands will not further threaten the survival of the species.

**Transfer to National Monuments & National Conservation Areas (NM&NCAs) (-\$366,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from a variety of MLR

subactivities to the National Conservation Lands. This \$5.0 million transfer includes \$366,000 from Wildlife Management. Since its creation in 2009, the BLM has not had the financial resources for systematically incorporating newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

## Wildlife Management Program

### Program Components

The BLM is responsible for managing more wildlife habitat than any other Federal or State agency. The BLM conducts activities to support healthy and diverse populations of wildlife species on behalf of the American people. Over 3,000 species of wildlife occur on BLM-managed lands, including big game, upland game birds, and waterfowl, as well as amphibians, reptiles and other birds and mammals. Numerous species occur nowhere else in the country and, for these, the BLM has an important stewardship responsibility.

The BLM Wildlife Management Program conserves and restores wildlife habitat as an integral part of the bureau's multiple use and sustained yield mission. Priority program activities include:

- Developing science-based strategies and conducting essential conservation actions to maintain sustainable populations of sensitive wildlife species;
- Restoring habitats to enhance populations of native wildlife and plants;
- Collecting data to provide a solid foundation for land management planning; and
- Implementing on-the-ground conservation in priority areas which are identified as part of a larger, landscape scale strategy in partnership with others.

The BLM manages over half of the remaining sagebrush habitat essential to the survival of the Greater sage-grouse. Conserving and restoring high quality habitat for this iconic Western species is key to precluding the need to list the bird under the Federal Endangered Species Act. In partnership with the States and other Federal agencies, the BLM has developed the Greater sage-grouse Conservation Strategy to address the challenges posed by wildfires, nonnative plant encroachment and the conversion of sagebrush habitats to other uses.

The Wildlife Management Program supports the development and application of science-based management to reduce the adverse effects of climate change on wildlife and habitats. Working with DOI's network of 22 Landscape Conservation Cooperatives (LCCs) and six Climate Science Centers, the BLM will engage with other Federal and State agencies, tribal authorities, and nonprofit conservation organizations to:

- identify and conserve habitats that are resilient in the face of climate change,
- develop methods to evaluate the ability of working landscapes to store carbon, and
- expand the availability of climate-related resource management training for staff.

### Critical Factors

The BLM addresses a number of critical factors and demands in its Wildlife Management Program. These include the following:

- Wildlife habitat loss and fragmentation continue to occur, resulting in significant declines for many wildlife species.

- Beyond reducing available surface water and forage for wildlife, drought can have a profound influence on wildfire cycles, which can alter habitat conditions over large areas for many years. According to the National Interagency Fire Center, over 3.7 million acres of sage-grouse habitat have burned since 2012. Restoring sage-grouse habitat after fire is a complex and difficult undertaking.
- Authorization of land uses that impact wildlife habitat have significantly increased in conjunction with new energy initiatives.

### Means and Strategies

- Since 2010, the BLM has conducted rapid ecoregional assessments (REAs) to address the management of wildlife and habitat resources at a scale equivalent to the intensified broad-scale land use pressures and associated stressors, including catastrophic wildfire and associated degradation and conversion of native vegetation communities, disease, as well as the compounding effects of land health stressors.
- The BLM is working to standardize and integrate data across landscapes and jurisdictions to gain a fuller understanding of changes to wildlife populations across geographic regions and better coordinate actions to mitigate species decline.
- In keeping with Secretarial Order 3303, the BLM is developing the tools and directives needed to implement compensatory mitigation at broad landscape scales that will be designed to offset the unavoidable impacts of public land use on wildlife species and their habitats.
- Most species and habitats present on BLM lands do not occur exclusively on lands administered by the BLM. Additionally, BLM land ownership is not spatially contiguous, both at the regional and site scales. Therefore, the BLM works closely with its partners across jurisdictional boundaries to ensure that wildlife conservation measures applied on BLM lands are effective. As a result, the BLM has:
  - Improved coordination and collaboration with important conservation partners, including Federal, State, tribal, academia and non-governmental organizations;
  - Supported development and implementation of standardized wildlife monitoring protocols to ascertain population trends across jurisdictional boundaries; and
  - Developed standardized regionally-specific habitat management guidelines for reptile and amphibian habitats that have been distributed to all BLM field offices;
- Consistent with BLM policy direction, the BLM works closely with State fish and wildlife agencies on natural resource issues, particularly in furtherance of State Wildlife Action Plans, which establish broad-scale wildlife priorities and identify the species of greatest conservation need as well as the habitats necessary for their protection.

## 2016 Program Performance

In 2016, the BLM Wildlife Program will significantly expand its role in implementing the National Greater Sage-Grouse Conservation Strategy and:

- Conduct an extensive set of sage-grouse conservation activities across 11 States;
- Emphasize wildlife habitat improvements in order to reduce the number of species of concern failing to meet objectives, while maintaining a sufficient level of monitoring to ensure the effectiveness of those improvements;
- Emphasize performance of actions under agency-endorsed plans for the purpose of conserving non-federally listed species to prevent the need for listing under the Endangered Species Act;
- Accomplish substantial habitat assessment and monitoring to provide an understanding of the range and distribution of priority species, to describe existing conditions, and to determine if management decisions have been implemented and objectives are being met; and
- Maintain and enhance partnerships with States, non-government agencies, and sister Federal agencies to continue to support rural community economies through game and non-game habitat management where the use and appreciation of these species is a high value component of local economies.

## Plant Conservation Program

### Program Components

Public lands contain a diversity of native plant communities that are the habitats for fish, plants, pollinators and wildlife such as the sage-grouse and desert tortoise. These native plant communities make up over 50 ecoregions across the BLM and each ecoregion contains native plants that have adapted to those environments. The BLM Plant Conservation Program is responsible for protecting, maintaining and restoring Western native plant communities and rare plants on public lands. The Program provides national leadership in seed collection, seed conservation, seed procurement and storage, and native plant materials development/use for restoration and rehabilitation of public land. In addition, the Plant Conservation Program is responsible for rare plant work.

The Plant Conservation Program consists of the following elements:

- Identifying, evaluating, and protecting rare plants on public lands, including National Conservation Lands units;
- Understanding the effects of climate change on native plant species and native plant communities on public land;
- Developing genetically appropriate native plant materials for restoring and maintaining habitat for sage-grouse and other animal and plant species;
- Providing leadership and infrastructure on native plant materials development by coordinating with all BLM programs and by establishing ecoregional native plant programs to ensure locally adapted native plant material needs are met;
- Providing national leadership for Seeds of Success;
- Developing seed transfer zones and guidelines;
- Coordinating a national network of seed storage warehouses with environmentally controlled conditions to protect our seed investment;
- Monitoring the effectiveness of native plant materials that have been developed;

- Implementing on-the-ground habitat conservation and restoration treatments on a landscape scale; and
- Enhancing partnerships and volunteer opportunities for plant conservation.

Seeds of Success is the Bureau’s national seed collection program and is the foundation of the native plant materials development process. Over 16,000 native seed collections have been made since 2001 when Congress directed the BLM to establish a Native Plant Materials Development Program. The number of seed collections has remained relatively stable (see graph below) except for an increase in 2010, due to additional funds provided through the American Recovery and Reinvestment Act.

For more information on BLM’s Plant Conservation Program please see the following websites:

Great Basin Native Plant Program:

<http://www.fs.fed.us/rm/boise/research/shrub/greatbasin.shtml>

**10 Years of Seeds of Success Collections**

### Critical Factors

- The effects of landscape health stressors such as drought, disease, catastrophic wildfire, and urban growth and development are altering native plant communities across the West. As rainfall and temperatures change, native plant species and communities may not adapt as fast as the environment changes, thus affecting sage-grouse and other species' ability to survive.
- Healthy, resilient, functioning native sagebrush communities play a significant role in the Bureau's ability to maintain sage-grouse populations in the West. The diversity of native forbs and grasses within the sagebrush communities is vital to the survival of sage-grouse. These native plants provide food and shelter for the sage-grouse, especially the young chicks.
- Healthy landscapes in the West today are at greater risk due to more intense and extended droughts, increasing wildfire frequency, and continuing migration of invasive species. Historically, resilient Western native plant communities burned on average once every 40 years; however, with monocultures of invasive plants and drought, fire frequency is closer to once every five to seven years. Because of these factors, more aggressive development of native plant materials are needed for rehabilitation after fire and restoration of habitats for fish, plants, pollinators and wildlife

- Native plant materials, like agronomic crops, take an average of 10 to 20 years to develop as consistent and reliable commercially available seed. Therefore, the BLM must plan ahead for native plant materials to be available for landscape level restoration.
- Development of public lands for renewable energy, non-renewable energy, and mineral resources requires mitigation efforts to offset loss and fragmentation of native plant communities.
- Spread of invasive terrestrial species requires additional monitoring and treatment to prevent degradation of functioning ecosystems and native plant and animal communities.

### Means and Strategies

The Plant Conservation Program coordinates with other BLM programs and partner organizations to conserve, protect and restore native plant communities at the landscape level. To better achieve program goals and provide improved management of public lands, the Plant Conservation Program is working to implement the National Seed Strategy at a landscape scale. In this coordinated effort, the Plant Conservation Program is addressing critical factors through multiple activities, including:

- Supporting the Department's youth education investments and the America's Great Outdoors (AGO) Initiative by employing recent college graduates in the biological and environmental sciences, through the Conservation and Land Management Internship Program. Over 1,000 recent college graduates have gone through this program.
- Educating America's youth through the development of a high school curriculum on native plants. The BLM will use this model to develop elementary and middle school curricula for younger students.
- Supporting the renewable and conventional energy programs by encouraging use of local genotypes and developing native plant materials for use in reclamation projects. <http://www.blm.gov/wy/st/en/programs/pcp/mgmt.html>.
- Identifying national priority focal areas for native plant community conservation and restoration, as well as developing native plant materials for management activities at the eco-regional scale.
- Coordinating development of native plant materials for restoration with step-down strategies developed from the BLM's landscape approach and implementing restoration within Healthy Landscapes focal areas.
- Supporting ecoregional native plant materials development programs, such as the Colorado Plateau Native Plant Program, the Great Basin Native Plant Program, the Pacific Northwest Native Plant Program, and the Mojave Native Plant Program, to develop locally adapted seed for commercial availability.
- Leveraging Plant Conservation Program funds with other Federal, State, and local agencies and NGOs to implement on-the-ground projects and conduct research in native plant development and restoration techniques.

### 2016 Program Performance

In 2016, BLM will continue to lead the Interagency Native Plant Materials Development Program, including Seeds of Success, Plant Conservation Alliance Federal Committee and regional interagency native plant materials development programs in the Colorado Plateau, Great Basin, Pacific Northwest, Wyoming Basin and Mohave Desert. These programs will work with partners to focus research on native plant materials development and to get more diversity

of native plant materials to the growers in the various ecoregions. The BLM will implement a National Seed Strategy, developed in 2015, which will assess BLM seed use, stabilize BLM seed requests, integrate native seed collection across the Bureau, and address seed procurement and storage to ensure the highest quality seed for restoration and rehabilitation.

The BLM Plant Conservation Program worked with The Institute for Applied Ecology to develop a protocol for working with State prisons to grow locally sourced sagebrush plants to support restoration of GSG habitat. A pilot project to produce 20,000 sagebrush plants was established in 2014 at the Snake River Correctional Facility in eastern Oregon. The plants grown at this facility were planted into a site damaged by wildfire on nearby BLM lands. In 2015, the Plant Conservation Program used the protocol and pilot project to address the lack of locally adapted sagebrush seedlings for restoration and expanded the program to four other prisons in the Great Basin. This program will continue in 2016.

**Activity: Wildlife and Fisheries Management**  
**Subactivity: Fisheries Management**

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Fisheries Management	\$000	12,530	12,530	+190	-35	+0	12,685	+155
	FTE	85	85		+0	+0	85	+0

Summary of 2016 Program Changes/Internal Transfers for Fisheries Management:	(\$000)	FTE
Internal Transfer to National Conservation Lands	-35	+0
<b>Total</b>	<b>-35</b>	<b>+0</b>

**Justification of 2016 Program Change**

The 2016 budget request for the Fisheries Management Program is \$12,685,000 and 85 FTE and reflects an internal transfer of -\$35,000.

**Transfer to National Conservation Lands (NM&NCAs) (-\$35,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$35,000 will be transferred from Fisheries Management. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

**Program Overview**

**Program Components**

The BLM manages three million acres of lakes and 132,000 miles of rivers, which provide subsistence and support internationally famous recreational and blue ribbon fisheries, including the Rogue River, Lake Havasu and Gunnison Gorge. The economic value of recreational fishing on BLM-managed waters alone is an estimated \$8.8 billion annually and supports several thousand jobs.<sup>5</sup>

The BLM Fisheries Management Program (BLM Fisheries) works to protect and restore these incredible aquatic resources, including hundreds of native fish, aquatic species and their habitats. Often

<sup>5</sup>2013 BLM Public Lands Statistics, [http://www.blm.gov/public\\_land\\_statistics/pls13/pls2013.pdf](http://www.blm.gov/public_land_statistics/pls13/pls2013.pdf)

this is accomplished in conjunction with private landowners, Federal, State, and NGO partners. The BLM Fisheries Management program:

- Designs and implements lake, wetland, stream, and riparian treatments to restore and reconnect aquatic habitat on public and private lands;
- Assists and contributes to other BLM program areas to ensure fish, aquatic species and their habitats receive full consideration;
- Conducts aquatic resource research, inventory and monitoring to support BLM management decisions and assess effectiveness of management actions;
- Leads and participates in efforts to prevent and limit the spread of Aquatic Nuisance Species (ANS), including developing education and outreach materials;
- Leads, conducts and provides support for youth employment opportunities activities, and promotes and enhances BLM aquatic recreational experiences for veterans; and
- Establishes Bureau-wide policy, guidance and directives for BLM's aquatic resources.

### Critical Factors

Challenges affecting aquatic resources on BLM lands:

- **Climate Change and Other Stressors:** Land health stressors, such as those associated with climate change, are increasing threats to fish and fish habitat as they cause changes to the aquatic habitat on BLM lands. Specifically, drought, changes in runoff and flow patterns, reduced stream network connectivity and the increasing risk of catastrophic wildfire individually and collectively impact aquatic resources. The effects of these land health stressors place a enormous strain on aquatic ecosystems. A greater focus on proactive conservation of these habitats will be essential for their long term persistence.
- **Rewable Energy Development:** The priority for developing renewable energy (hydropower, wind, solar, and geothermal) as part of the Powering Our Future initiative places increasing demands on BLM Fisheries personnel. The program is working to ensure sites of high potential for energy development, and the transmission corridors linking these sites to the energy grid, are developed in a responsible manner consistent with the short and long-term conservation needs of aquatic resources.
- **FERC Relicensing:** The licensing and relicensing of hydropower projects creates a significant opportunity to direct the development of license conditions to conserve fisheries resources so that Federal trust responsibilities are met for the next 30-50 years. It is imperative that the bureau is engaged during these liecensing processes.
- **Aquatic Organism Passage (AOP):** The program continues to focus on fish-passable culvert and bridge replacements. Culvert upgrades or removal reconnect high quality habitat for numerous aquatic species. AOP projects have the ability to immediately restore natural stream process and return fish to mature, functioning riparian and in-stream habitats.

- **Legacy Roads:** Road treatments are addressed to stabilize and reduce catastrophic sediment input from historic, poorly planned or failing roads made of soft fill material, which cannot adequately pass downstream water or deposits sediment laden runoff directly into fish bearing streams. Ponding and failure occurs as the standing water upstream overtops or erodes the road, resulting in severe erosion that inundates and smothers downstream fish habitat with sediment.
- **Invasive Species:** BLM Fisheries is responsible for working with State and other Federal agency partners to develop strategies and programs to combat the ecological and economic threats caused by aquatic nuisance species nationwide. BLM Fisheries' role is to minimize the threats from aquatic invasive species, such as the quagga and zebra mussel, New Zealand mudsnail, and multiple other plants, vertebrates and invertebrates. Aquatic invasive species pose a serious threat to our Nation's economy as well as the viability of native fish communities.

### Means and Strategies

BLM Fisheries is meeting these challenges by:

- Working synergistically with other BLM programs to create a lands treatment database to document where treatments take place on the landscape and the effectiveness of those treatments;
- Educating youth about the importance and complexity of fisheries and fisheries habitat through the expansion of the American Fisheries Society's Hutton Program;
- Working with partners including State agencies, universities, non-governmental organizations, and National Fish Habitat Partnership (NFHP) organizations.
- Assessing aquatic habitat using Trout Unlimited's modified Conservation Success Index methodology. This work is part of the on-going Assistance Agreement and will be utilized in BLM watersheds for critical aquatic assessments.

#### *The Least Chub...A BLM Fisheries Success Story*

In August 2014, the U.S. Fish and Wildlife Service withdrew the least chub from its Endangered Species Act candidate list, concluding that conservation efforts have reduced or eliminated current and future threats to the least chub to the point that the species is no longer in danger of extinction now or in the foreseeable future.

Cooperative conservation efforts were spearheaded by the Least Chub Conservation Team, of which BLM-Utah was a key member. The BLM provided financial and personnel support for least chub conservation work and critical on-the-ground conservation actions, which included the management and protection of existing populations and their associated habitats and replicating populations to new

### 2016 Program Performance

BLM Fisheries will continue to support the bureau's mission-critical goals of maintaining and restoring aquatic-related species and their habitats. In addition to NFHP support, the BLM will play a significant role in the identification and implementation of these actions. Salmon and steelhead fisheries resources will remain a priority for those geographic areas within the migration range. BLM Fisheries will continue to work closely with the Aquatic Nuisance Species Task Force, including its Western Regional Panel, the Association of Fish and Wildlife

Agencies, the Western Association of Fish and Wildlife Agencies, Trout Unlimited, the National Fish and Wildlife Foundation and the American Fisheries Society.

In 2016 the BLM will build on previous efforts to restore and conserve fisheries and their habitats on BLM lands across America.

Numerous active fish habitat restoration activities will benefit native fish, including the Jack Wade Creek Placer Mining reclamation demo project in Alaska; the Escalante, San Rafael River watershed restorations in Utah; Overflow Wetland Pecos Pupfish conservation agreement restoration, San Juan River Basin Recovery Implementation Program in New Mexico; and Headwaters Forest Reserve-Road Decommissioning and Instream habitat restoration in California. Additional fisheries inventory and monitoring work will take place and inform management decisions via the Gulkana River Subsistence monitoring project in Alaska, and Coho salmon monitoring in the Mattole River, California.

Invasive species work is planned in the Paynes Creek wetlands in California. Nationally, the BLM plans to continue its Aquatic Invasive Species outreach work with Wildlife Forever. The program's invasive species prevention messages reach four million people annually through a successful advertising campaign in Western fishing and hunting regulation books.

The program continues to work with irrigators and farmers in the Bear River Basin, in Utah, Wyoming, and Idaho on one of the most successful fish passage programs in the country. It is one of the largest scale Trout Unlimited-BLM projects (600 mile river crossing three states), Over the last nine years, we have reconnected 151 miles of critical migration corridors, linking tributary and main stem habitats by removing fish passage barriers, installed over 35 fish passage structures to restore upstream access to critical spawning and rearing habitats in headwater tributaries. The prime fishery result is the return of large migratory Bonneville cutthroat trout across the drainage.

During 2016, the program will continue the ongoing 22-year old Maggie Creek Watershed Restoration effort near Elko, Nevada. Chosen as national model for watershed restoration efforts everywhere under the National Fish Habitat Initiative, the project so far has restored 82 miles of stream, 2,000 acres of riparian habitat, and 40,000 acres of upland watershed in the Maggie Creek basin. The most important fishery result has been the return of Lahontan cutthroat trout to 23 miles of stream where they were formerly extirpated.

Community service and outreach activities will be accomplished through partners including FishingCommunity.org and Project Healing Waters Veterans activities in Arizona, Alaska, Florida, Virginia, Maryland, West Virginia, and Washington DC; fishing day events throughout BLM field offices; and Cosumnes River Preserve and Redding Environmental education and outreach efforts in California. Finally, program efforts in 2016 will add to the successful 23-year cooperative conservation partnership with Trout Unlimited to reconnect, restore and sustain critical fisheries habitat and populations throughout the West.

# Threatened and Endangered Species Management

## Activity: Threatened and Endangered Species Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Threatened & Endangered Species	\$000	21,458	21,458	+305	-196	+0	21,567	+109
	FTE	152	152		+0	+0	152	+0

Summary of 2016 Program Changes/Internal Transfers for Threatened & Endangered Species:	(\$000)	FTE
Internal Transfer to National Conservation Lands	-196	+0
<b>Total</b>	<b>-196</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Threatened and Endangered Species Program is \$21,567,000 and 152 FTE, and reflects an internal transfer of \$196,000.

**Transfer to National Conservation Lands (NM&NCAs) (-\$196,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million, \$196,000 will be transferred from Threatened and Endangered Species Management. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

### Program Overview

The primary goal of the Threatened and Endangered (T&E) Species Program is to recover Federally-listed species and preclude the need to list candidate species. The program also provides support for conservation of non-listed, rare plant species. The long-term program vision is to achieve species recovery so that protection under the Endangered Species Act (ESA) is no longer required and to implement conservation programs for Bureau sensitive plants and Federal candidate species so that listing under the ESA is unnecessary.

### Program Components

Over 420 species listed under the ESA occur on BLM-managed lands. Furthermore, over 110 candidate species warranting Federal protection are found on BLM lands. BLM-managed lands are recognized as prime habitat for over 1,000 rare plant species and provide the only known habitat for more than 450 species of rare or listed plants and animals.

The BLM's successful conservation of these species requires implementation of the following tasks:

- Cooperative planning with other stakeholders in the preparation of recovery plans and development of conservation strategies for targeted species

- Implementing actions identified in species conservation and recovery plans;
- Conducting inventories for newly listed, proposed and candidate species; and,
- Monitoring species populations to determine if objectives identified in species conservation and recovery plans are being met.

### **Critical Factors**

The number of Federally-listed species is steadily growing due to increasing conflicts with resource use and the compounding impacts of fire, drought, and climate change. The BLM is committed to prevent extirpation of these species on BLM-administered lands and to further recovery and conservation of Federally-listed and candidate species.

### **Means and Strategies**

The BLM Threatened and Endangered Species Recovery Fund awards approximately \$1.0 million annually, on a competitive basis, to recovery actions that culminate in a delisting or down-listing of a Threatened or Endangered species or precludes the need to list a candidate species. This Recovery Fund has supported significant species recovery efforts in the field, but BLM's recovery successes extend well beyond the funding associated with this initiative. Through the tireless efforts of BLM biologists, the invaluable partnerships that they cultivate, and the leveraging of funds from many different sources, the program has achieved a number of successes in species conservation. In 2014, seven Candidate Species were precluded from listing, in large part, due to the BLM's conservation efforts. For instance, the U.S Fish and Wildlife Service (FWS) announced that arctic grayling in Montana were deemed unwarranted for Federal listing. To date, the BLM has contributed approximately \$250,000 towards grayling restoration efforts in South West Montana. Funds have been used to conduct population monitoring, restore riparian areas, install riparian fencing as well as help with grayling re-introduction efforts in the Upper Ruby River drainage. The FWS also withdrew least chub from the candidate list and concluded that conservation efforts have reduced or eliminated current and future threats to the fish. The BLM's participation was notable because three of five naturally occurring populations of the fish are on BLM-managed public lands. Finally, the FWS determined that Churchill Narrows buckwheat and Las Vegas buckwheat in Nevada did not warrant protection under the ESA.

The benefits of the Recovery Fund have been recognized by other Federal agencies. The BLM is currently working with USFWS, FS, NPS, and other Federal agencies in analyzing species occurrence data, to strategically identify species which can be recovered through cooperative efforts. This endeavor will greatly increase the program's ability to recover and conserve T&E species and their habitats beyond jurisdictional boundaries. The targeted investment in recovering species meets a desired goal of sustainability and ecological integrity of BLM lands and also shifts focus from reacting to regulatory obligations to serving as proactive stewards of the land.

#### **Cooperative Landscape Conservation Initiative**

The Cooperative Landscape Conservation Initiative and the BLM's Healthy Landscapes program will help the T&E Program assess, manage, and provide for the conservation of Federally-designated species in light of impacts such as drought, wildfire, and invasive species encroachment. Ecoregional assessments and Landscape Conservation Cooperative efforts provide a landscape approach to addressing the health, resilience and intactness of

ecosystems. The T&E Program provides support for these initiatives by assisting with the development of rapid eco-regional assessments; listed species occurrence, distribution and critical habitat data on BLM lands; and collaborating with both intra and interagency outreach efforts.

#### Youth in the Great Outdoors Initiative

The T&E Program implements on-the-ground projects that either have an educational or outreach component to engage local youth or employ youth in conservation activities. The T&E Program will continue to hire recent college graduates in the biological sciences as part of the Chicago Botanic Garden's Conservation and Land Management Internship Program.

#### America's Great Outdoors

The T&E Program offers key criteria in selecting projects within the America's Great Outdoors initiative. The National Conservation Lands is an integral network of biologically diverse, wide ranging landscapes and ecosystems. Of the Federally protected species and rare plants that occur on BLM lands, 155 species occur only within designated units of the National Conservation Lands. An additional 114 species have at least 50 percent of their populations represented on National Conservation Lands. The National Conservation Lands are integral to threatened and endangered species conservation and recovery. The T&E Program will continue to support and implement management actions within the National Conservation Lands that benefit listed species or their habitat.

#### Program Collaboration and Partnerships

The range of most of the listed species found on BLM lands includes lands and waters not administered by the agency. The recovery of listed species requires management at the population or metapopulation scale, regardless of jurisdiction lines. Extensive collaboration and cooperation with a number of partners, including other agencies and organizations, is therefore an integral element of the T&E Program. Conservation collaborations typically begin with the development of recovery plans, written under the leadership of the U.S. Fish and Wildlife Service (FWS) or the National Marine Fisheries Service (NMFS). Implementation of recovery actions identified in these plans typically involves collaboration with such partners as State fish and game, other Federal, and non-governmental organizations (NGOs).

An example of this collaboration is the BLM's participation in the Black-Footed Ferret Recovery Implementation Team Executive Committee. Members include: the FWS, the U.S. Geological Survey, the National Park Service, the U.S. Forest Service, The Wildlife Society, The Nature Conservancy and several other NGOs and Federal and State Agencies. Efforts include the development of a sylvatic oral plague vaccine to protect ferrets and their prey, the prairie dog, against plague infection. The BLM continues to offer assistance in providing locations to implement the safety and efficacy trials for the vaccine's use in the field. The BLM also continues to increase its involvement in identifying appropriate areas where prairie dog expansion or re-colonization can take place and identifying potential sites for black-footed ferret reintroduction

## Compliance and Consultation

In addition to recovery planning and implementation, consultation under Section 7 of the ESA is a significant BLM endangered species management responsibility. Under the ESA, the BLM must consult with the FWS or the NMFS whenever it determines that an action it authorizes, funds, or carries out may affect a listed species. The BLM completes approximately 600 formal and informal consultations annually under Section 7 of the ESA. The monitoring, inventory, and recovery of Federally-listed species, supported by the T&E program, offer many benefits to other BLM priority portfolio programs such as energy development, mineral extraction, range management, horse and burro, forestry, and recreation. The inventory and monitoring information collected informs the consultation process, and the recovery efforts for Federally-listed and candidate species bolsters the resiliency of the species on the ground, which may accommodate more opportunities for multiple use.

### 2016 Program Performance

In 2016, the BLM T&E Program will:

- Continue to emphasize the completion of recovery tasks as identified in species recovery plans;
- Continue to focus on the program's primary goal of completing actions that lead to species recovery with support from the Threatened & Endangered Species Recovery Fund;
- Continue to document the program's accomplishments and efforts towards species recovery through the Special Status Species Tracking System, a reporting system developed by BLM's National Operation Center;
- Continue to inventory and monitor habitat on the millions of BLM acres where Federally-listed species are known or suspected to occur; and
- Continue to leverage additional dollars, equipment, and labor from Federal and non-Federal partners with shared T&E species recovery objectives.

# Recreation Management

## Activity: Recreation Management

		2014 Actual	2015 Enacted	2016 President's Budget			Requested Amount	Change from 2015
				Fixed Costs	Transfers	Program Changes		
Wilderness Management	\$000	18,264	18,264	+295	+0	+0	18,559	+295
	FTE	146	146		+0	+0	146	0
Recreation Management	\$000	48,697	48,697	+654	-1,615	+9,115	56,851	+8,154
	FTE	372	372		+0	+5	377	5
Total, Recreation Management	\$000	66,961	66,961	+949	-1,615	+9,115	75,410	+8,449
	FTE	518	518		+0	+5	523	5

### Justification of 2016 Program Change

The 2016 budget request for the Recreation Resource Management Activity is \$75,410,000 and 523 FTE, and reflects an internal transfer of -\$1,615,000 and a program change of +\$9,115,000 and +5 FTE from the 2015 enacted level.

### Activity Description

The Recreation Management Activity supports efforts to:

- Provide resource-related recreational opportunities for a wide range of activities;
- Furnish quality visitor services;
- Provide a diversity of recreation facilities, visitor centers, and competitive activities;
- Identify and protect wilderness values;
- Assure that the public receives fair market value for any commercial ventures conducted on public lands; and
- Collect recreation use and entrance fees in the best interest of the general public.

These responsibilities are encompassed by the Bureau's strategic goal to provide opportunities for environmentally responsible recreation.

The Recreation Management Activity provides:

- Recreation planning and visitor use monitoring;
- Trails, access, and rivers management including off-highway vehicle, public access, and comprehensive travel and transportation management;
- Visitor services, information, interpretation and stewardship education;
- Visitor health, safety, and accessibility for persons with disabilities;
- Recreation facility design, operation, and maintenance including visitor centers;
- Recreation and community support partnerships including tourism and marketing;
- Wilderness management in the National Conservation Lands; and
- Support to partnerships, volunteers, and youth programs.

## Activity: Recreation Management

### Subactivity: Wilderness Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Wilderness Management	\$000	18,264	18,264	+295	+0	+0	18,559	+295
	FTE	146	146		+0	+0	146	+0

#### Justification of 2016 Program Changes

The 2016 budget request for the Wilderness Management Program is \$18,559,000 and 146 FTE.

#### Program Overview

The Wilderness Management Program is a part of the BLM National Conservation Lands. The BLM's 15-year National Conservation Lands strategy supports the bureau's multiple-use mission by ensuring that management efforts are focused on conservation, while allowing for compatible uses, consistent with the designating legislation of the concerned wilderness area. In addition to conservation, the strategy emphasizes continued collaboration, public involvement, and youth engagement. Engaging local communities to help them foster a sense of shared stewardship and pride in their local wilderness is a key part of the Wilderness Management Program. The program also contributes to the Department of the Interior's Youth in the Great Outdoors Initiative by providing abundant opportunities for recreation, education, volunteerism, and work experience.

For more information on the National Conservation Lands Strategy, visit the BLM website at: [http://www.blm.gov/wo/st/en/info/newsroom/2011/september/NR\\_09\\_30\\_2011.html](http://www.blm.gov/wo/st/en/info/newsroom/2011/september/NR_09_30_2011.html)

The BLM is required to meet legal requirements for administering the Wilderness Management Program while also conserving, protecting, and restoring National Conservation Lands values in the 222 Wilderness Areas (8.7 million acres) and more than 520 Wilderness Study Areas (12.7 million acres) under BLM management as defined below:

- Wilderness Areas are undeveloped Federal lands designated by law to be managed to protect their wilderness character as defined by the Wilderness Act of 1964. These designated areas are generally large, natural, and undeveloped landscapes that offer outstanding opportunities for solitude or primitive and unconfined types of recreation.
- Wilderness Study Areas (WSAs) are roadless areas that contain wilderness characteristics and are protected to maintain those characteristics until Congress designates them as Wilderness Areas or releases them for non-wilderness uses.

The Wilderness Management Program focuses on the protection and conservation of wilderness and National Conservation Lands values with the following activities:

- Monitoring and preserving wilderness character;
- Managing use and encouraging appropriate wilderness uses;
- Monitoring and managing for noxious weed infestations, trespass activities, and recreation; and
- Restoring impacted areas such as trampled vegetation and eroded soil caused by unauthorized off-highway vehicles (OHV) travelling cross-country.

The National Wilderness Preservation System includes all Wilderness Areas managed by the U.S. Forest Service (USFS), the BLM, the National Park Service (NPS) and the U.S. Fish and Wildlife Service (FWS). It does not include BLM's WSAs. The BLM is unique in that the vast majority of its Wilderness Areas and WSAs are located in delicate desert environments; this adds an important ecosystem component to the National Wilderness Preservation System. Millions of people visit these areas annually either on their own or through the hundreds of permitted commercial outfitters that assist the public in enjoying these unique lands. This use provides significant economic impact to local communities and helps to sustain the natural heritage of their wilderness landscapes.

The Wilderness Management Program frequently addresses challenges associated with unauthorized uses such as illegal OHV use, which result in the degradation of wilderness character. Managing the wilderness resource requires collaboratively managing these assets as part of the larger landscape. After a Wilderness Area is designated, the BLM typically spends the first three years marking and mapping the boundary, and providing visitor services such as maps and other public information. Subsequent management includes acquiring in-holdings from willing sellers, restoring wilderness character where needed, engaging in land use planning and monitoring, implementing wilderness management plans, and providing visitor services. BLM staff engage in land use planning to prepare management plans for Wilderness Areas to guide long-term management and protection of wilderness character. These plans raise public awareness and understanding of the National Conservation Lands, promote stewardship of BLM-managed land, and provide for the use and enjoyment of these lands by present and future generations.

## **Program Emphasis Areas**

### **Preserving Wilderness Character**

Preserving wilderness character is at the heart of the BLM's responsibility to protect its Wilderness Areas for future generations. An interagency strategy for monitoring trends in wilderness character across the National Wilderness Preservation System outlines a unified approach for collecting data and will allow the identification of trends in wilderness character quality across all wilderness-managing agencies. The protocol developed to monitor and describe trends in the quality of wilderness character will eventually enable the BLM to establish a meaningful measure with verified baseline data, which will ensure that the BLM preserves wilderness character as required by the Wilderness Act.

During 2015, the BLM expects to continue gathering baseline data for each of its 222 Wilderness Areas. The BLM will then use this information to make meaningful, efficient management decisions to maintain or improve wilderness character.

### **Enhancing Scientific Knowledge**

BLM Wilderness Areas play a critical role in increasing scientific knowledge about a wide array of management challenges. The need for scientific research and information grows as new

issues are identified, including the effects of drought, climate change, and other landscape stressors on species habitat and migration corridors. Improved, higher-resolution satellite imagery and aerial photography aid in the monitoring of Wilderness Areas and WSAs. The BLM is also enhancing the role of science partnerships in wilderness management and collaborating with partners to help manage its Wilderness Areas as a part of larger landscapes.

### **Developing Partnerships and Engaging People and Communities**

Developing partnerships in wilderness stewardship is an important aspect of managing Wilderness Areas and WSAs and allows the BLM to leverage limited resources to achieve management goals. The Wilderness Management Program benefits greatly from a volunteer force that provides thousands of hours of resource monitoring in addition to materials and transportation for specific projects. The BLM has established nearly 100 formal and informal partnerships to facilitate wilderness stewardship activities. Typical examples of work performed by partners in Wilderness Areas and WSAs include building and maintaining trails, eradicating and monitoring for invasive species, interim management monitoring of WSAs, and reclaiming and restoring affected areas to create more-natural environments. The BLM has developed a Memorandum of Understanding with the National Wilderness Stewardship Alliance, a national organization that is coordinating the establishment of partners and friends groups to assist in wilderness stewardship in the National Wilderness Preservation System. Many of these groups have strong ties to local communities and can help foster a sense of shared stewardship and pride in their local wilderness.

### **Connecting Landscapes by Working Collaboratively**

The Wilderness Management Program benefits greatly by working collaboratively with several crosscutting BLM programs and other agencies to achieve larger landscape-scale goals. Projects that manage wildlife, fire, weeds, and rangeland resources routinely benefit wilderness resources and assist the BLM in meeting its legal requirements. By establishing connections across boundaries with other jurisdictions; other Federal, State and local agencies; and private conservation lands, the BLM complements and supplements the management of these areas, allowing the BLM to manage the Wilderness Areas under its jurisdiction as a part of these larger landscapes and strengthening the resilience of all areas.

## **2016 Program Performance**

In 2016, the BLM plans to monitor its 222 Wilderness Areas and will continue routine monitoring of its more than 520 WSAs to ensure the BLM is protecting those areas' wilderness character. Due to competing program priorities, the BLM was not able to complete collection of baseline wilderness character data for all of its Wilderness Areas by the end of 2014. Since establishing this baseline is essential to implementing the interagency strategy for monitoring trends in wilderness character, the BLM will develop an interim performance measure that assesses the percentage of BLM Wilderness Areas for which the agency has collected baseline data. Having a completed baseline will allow the BLM to begin to identify trends in wilderness character quality using a protocol common to all four wilderness-managing agencies.

In addition, BLM's efforts to update existing wilderness characteristics inventories will continue to be a priority workload in 2016. As the BLM prepares to update several land use plans in the next few years, it will be necessary to have high-quality, up-to-date inventories of lands with wilderness characteristics in order to ensure the success of these plans. This workload will entail providing training for agency staff responsible for conducting inventories of lands with wilderness characteristics, and considering such lands in the land use planning process. The

training will conform to BLM Manual 6310—Conducting Wilderness Characteristics Inventory on BLM Lands, and BLM Manual 6320—Considering Lands with Wilderness Characteristics in the BLM Land Use Planning Process.

## Activity: Recreation Management

### Subactivity: Recreation Resources Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
<b>Recreation Management</b>	<i>\$000</i>	48,697	48,697	+654	-1,615	+9,115	56,851	+8,154
	<i>FTE</i>	372	372		+0	+5	377	+5

Summary of 2016 Program Changes/Internal Transfers for Recreation Management:	(\$000)	FTE
National Recreation Strategy	+6,615	+5
Youth in the Great Outdoors	+2,500	+0
Internal Transfer to National Conservation Lands	-1,615	+0
<b>Total</b>	<b>+7,500</b>	<b>+5</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Recreation Resources Management Program is \$56,851,000 and 377 FTE. This reflects program increases of +\$9,115,000 and +5 FTE and internal transfers of -\$1,615 and 0 FTE from the 2015 enacted level.

**National Recreation Strategy – Connecting with Communities(+ \$6,615,000/+5 FTE)** – The requested increase will allow the BLM to implement its National Recreation Strategy, which aligns the resources of the BLM's Recreation & Visitor Services Program with the desired outcomes of local communities, businesses, and other service providers to increase delivery of benefits to the recreating public and refines program objectives to achieve recreation-tourism outcomes that communities value most, while capitalizing on the inherent advantages of the BLM's unique recreation brand. In 2016, the program will address safety needs, provide better signage and interpretive exhibits, improve accessibility standards at 26 BLM Visitor Centers, and implement the Mountain Bike Action Plan with national partners.

Funding will also be used for an interactive national level map; a site specific webpage design that features recreation information; and static, printable PDF maps showing recreation facilities and amenities. These products will have a consistent look and feel, operate on a variety of platforms, including mobile networks, and will provide consistent and accessible information across all BLM recreation sites and units of the National Conservation Lands with information about each site and available recreation.

**Youth in the Great Outdoors (+\$2,500,000/0 FTE)** – The 2016 budget request includes a \$2.5 million increase for the Secretary's Youth Initiative in the Recreation and Visitor Services program. Funding will allow the BLM to expand efforts to educate, engage, and employ young people. Special consideration will be given to those programs that provide youth from diverse backgrounds with hands-on learning in Science, Technology, Engineering, and Mathematics (STEM), and prepare them for careers in STEM fields.

**Transfer to National Conservation Lands (-\$1,615,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation

Lands. Of the \$5.0 million, \$1.6 million will be transferred from Recreation Resources Management. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

## Program Overview

Public lands managed by the BLM provide some of the most diverse outdoor recreation opportunities on Federal lands in the western U.S. The Bureau's Recreation and Visitor Services Program oversees a broad and complex set of recreation related and social management activities and programs.

The Recreation Management program is responsible for the following components:

- **Recreation Planning** – Evaluating and assessing a wide range of social, economic, and recreational uses of public lands through the land use planning (LUP) process. Recreation Area Management Plans are prepared to implement LUP decisions in designated recreation management areas.
- **Travel and Transportation Management** – Determining public and resource use access needs through the LUP process. The BLM travel and transportation management planning process establishes designations and restrictions for all modes of transportation including motorized and non-motorized uses.
- **Visitor Safety** – Providing opportunities for safe recreational activities for the public, as well as, to educate and encourage safe behavior.
- **Facility Management and Accessibility** – Providing daily operation and routine maintenance of over 3,650 recreation sites and 380 Special Recreation Management Areas, including campgrounds, picnic and day use areas, visitor centers, waysides and kiosks, watchable wildlife sites, historic buildings and lighthouses, trailhead access points, and thousands of miles of rivers and trails. As communities near public lands grow in the West, visitation and demands for new trails and visitor service facilities increase each year. In addition to operating facilities, the BLM is responsible for ensuring facilities and programs meet accessibility standards for persons with disabilities.
- **River Management** – Managing over 500 segments and about 9,000 miles of floatable/boatable rivers and lakes along with associated issues related to water quality, permitting, education and interpretation, visitor safety, enforcement patrols, and resource management. Of these floatable/boatable rivers and lakes, 320 segments and 6,600 miles have significant recreational value. A portion of the funds for river management also serves the needs of Wild and Scenic Rivers, managed by the National Conservation Lands (reference NCL write-up).
- **National Scenic & Historic Trails** – Monitoring over 4,500 miles of 10 National Historic Trails and is responsible for over 600 miles of three National Scenic Trails. (For more information, reference the National Conservation Lands activity).

- **Hunting, Fishing, and Shooting Sports** – Implementing important provisions of Executive Order 13443, Facilitation of Hunting Heritage and Wildlife Conservation, which directs agencies to facilitate the expansion and enhancement of hunting opportunities and the management of game species and their habitat.
- **Youth** – Overseeing components of the Bureau's Youth in the Great Outdoors initiative, a significant component of the President's America's Great Outdoors initiative. The Recreation program also oversees the Take It Outside program to promote outdoor activities for kids. The BLM will continue to promote healthy and active lifestyles and better engage the next generation as public land stewards for natural resource conservation.
- **Visual Resources** – Analyzing, managing, and ensuring protection of visual resources to maintain valued landscape aesthetic character.
- **Recreation Permits, Fees, and Commercial Leases** – Reviewing, implementing, and monitoring over 3,200 special commercial and competitive recreation permits and over 800,000 individual use authorizations for special areas each year. The BLM also provides oversight and accountability for the recreation permit, fee, and commercial lease program.
- **Public Outreach, Stewardship and Partnerships** – Promoting and supporting partnerships, volunteerism and stewardship to enhance recreational and educational experiences for visitors and public land users. The BLM is working with community leaders and networks of service providers to manage recreation opportunities that the public wants and that will bring economic benefits to local communities. The Bureau is also partnering with veterans and disabled sportsmen's groups to ensure access to recreational opportunities.
- **Visitor Information** – Providing visitor information and services including maps, websites, interpretation and environmental education. Enhancing the quality and consistency of baseline visitor and resource data by conducting inventories and implementing visitor use monitoring systems to improve understanding of the full range of social, economic and community resource values and enhance decision making capabilities.
- **Cave Management** – Overseeing cave and karst (an irregular limestone region with sinkholes, underground streams, and caverns) resource management policies and program.
- **Customer/Visitor Service Satisfaction Surveys** – Measuring success in providing quality visitor services through an annual survey. The BLM continues to maintain scores of above the 90 percent range in customer satisfaction in providing recreation program visitor services and facilities to its customers.

### Critical Factors

The primary critical factors impacting the Recreation Program are:

- **Urban Growth:** As communities near public lands grow in the West, visitation and demands for new trails and visitor service facilities have increased each year. There are over 132 million acres of BLM-managed land in the western U.S. within 50 miles of an urban area with a population of 50,000 or greater.
- **Public Demand:** Visitation to public lands has increased from 51 million visitors in 2001 to 61 million in 2014
- **Public Access Conflict:** Off-highway vehicle (OHV) use on public lands continues to increase. The BLM addresses travel and transportation planning as well as OHV

management and restoration needs through Travel Management Plans and the Resource Management Planning process. In response to the increased OHV use, the BLM is implementing a comprehensive and interdisciplinary approach in developing travel management plans and implementing actions to address the demand for public services, ensure public health and safety, protect natural and cultural resources, and reduce use conflicts.

- **Public Safety and Resource Protection:** Increasing urbanization and motorized activities have resulted in law enforcement personnel spending significant resources on OHV, urban interface and border-related enforcement activities.

## Means and Strategies

The primary means and strategies utilized in the Recreation Program are:

- **Visitor Data:** Improving baseline visitor and resource data by conducting inventories and implementing visitor use monitoring systems.
- **Travel and Public Access Management:** Balancing off-highway vehicle access and use with resource protection and public access needs by updating and implementing comprehensive travel management plans;
- **Visitor Information and Education:** Expanding visitor information delivery and quality by improving signing and websites, and developing travel maps.
- **Visitor health, safety and accessibility:** Ensuring and enhancing visitor health and safety and improving access for the disabled by conducting recreation facility condition assessments and fixing problems or hazards.
- **Permits and Use Authorizations:** Regulating uses by issuing and monitoring recreation use permits and allocating use for commercial, competitive, organized, and individual uses within specially designated areas.
- **Accountability and transparency:** Improving accountability and effectiveness by issuing recreation special permits, conducting fee program and fee site business practices assessments, and conducting audits and program evaluations.
- **Visitor Use Monitoring:** Protecting resources, improving services, and enhancing the quality of recreational experiences by monitoring visitor use and satisfaction, as well as monitoring vehicular use and their impacts on resources.
- **Partnerships and Public Service:** Reducing operational costs by emphasizing the use of volunteers and providing extensive public service opportunities. The recreation program has been particularly successful in engaging volunteers, accounting for almost half of the entire Bureau's volunteer hours and nearly doubling the seasonal recreation workforce to serve visitors, maintain facilities and restore resources.

## 2016 Program Performance

The public lands attract millions of visitors each year that are economic engines for local communities across the West. In 2014, 61 million recreational visits to Federal public lands and waters generated over \$5.5 billion in economic outputs, and supported over 42,000 jobs. In 2016, the BLM will invest in the programs that support recreational visits, build strong partnerships, and create the maximum potential for recreation benefits to local communities.

The additional funding would allow the BLM to implement the National Recreation Strategy with the following priority areas:

***Backyard to Backcountry:*** More than 120 urban centers in the western United States and thousands of rural towns are located within 25 miles of BLM lands, according to data from the 2010 census. Although many in the past have viewed this intermingling of public lands with State, county, and private lands as a weakness, this ready accessibility to public lands creates a unique recreation-tourism product, a distinctive niche in the Federal recreation marketplace that offers a competitive advantage.

Typically, the BLM has engaged with recreation partners when opportunities have presented themselves for specific activities. The National Recreation Strategy would move the Bureau away from a reactive approach to these partnerships and would devote the necessary resources to making sustained efforts to identify and develop outcome-focused partnerships with community networks of service providers as a matter of good business. Partnership in community networks will also help the BLM focus on its recreation brand and develop systematic plans that maximize the most significant shared benefits, without trying to be “all things to all people.”

# Energy and Minerals Mangement

## Activity: Energy and Minerals Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015

(1): 2014 and 2015 Oil and Gas Management FTE include 275 FTE paid for with APD fees. See Oil and Gas Management subactivity table and chapter for details.

(2): The 2016 budget proposes to shift the cost of inspections to inspection fees, which are estimated to generate \$48.0 million.

### Justification of 2016 Program Changes

The 2016 budget request for current appropriations for the Energy and Minerals Management activity is \$118,899,000 and 664 FTE, a program change of -24,652,000 and -520 FTE from the 2015 enacted level. These net changes reflect increases in other funding sources available to the program under separate authorizing legislation and from proposed new fee revenues. The budget assumes an additional \$48,000,000 in funding resources would be available to the Oil and Gas Program through proposed oil and gas inspection fees. In addition, as a result of recent changes included in the National Defense Authorization Act for 2015, an estimated \$56,495,000 in mandatory funds in the Oil and Gas Permit Processing Improvement Fund would also be available to the Oil and Gas Program. All told, total funding resources available to the Oil and Gas Program in 2016 is estimated to be \$171.3 million, or \$29.1 million above the 2015 estimate. See the Oil and Gas Management subactivity for more details.

### Activity Description

Energy and mineral resources generate the highest revenue values of any uses of the public lands from royalties, rents, bonuses, sales, and fees. In 2014, onshore Federal lands produced 41 percent of the Nation's coal, 40 percent of the Nation's geothermal capacity, 11 percent of domestic natural gas, and five percent of domestically-produced oil.

The goal of the Oil and Gas Program is to provide access to oil and gas where appropriate, and to manage exploration and development activities in an environmentally sound way.

Coal is used to generate approximately 46 percent of the Nation's electricity. The electric power sector (electric utilities and independent power producers) accounts for about 90 percent of all coal consumed in the U.S. and is the driving force for the Nation's coal consumption.

The BLM provides other minerals needed to support local infrastructure and economic development. Demand is increasing globally for non-energy solid minerals such as potassium, phosphate, sodium, and potash. Other important mineral resources produced from public lands include uranium, gold, silver, gypsum, sodium, building stone, sand, and gravel. The BLM processes sales and issues permits for mineral materials such as sand, gravel, stone, and clays, which are essential to maintenance and construction of roads and buildings, including those used by the BLM to fulfill its land management objectives.

The Renewable Energy Management Program is responsible for processing right-of-way applications for wind and solar energy, overseeing geothermal energy leasing and development, and prioritizing transmission development associated with renewable energy production.

Geothermal energy development was historically managed as part of the Oil and Gas Management Program. Funding for geothermal leasing and development was transferred from the Oil and Gas Management Program to the Renewable Energy Program in 2013 as management oversight of renewable energy development was consolidated into a single program. The BLM has the delegated authority for leasing 249 million acres of Federal land (including just over 100 million acres of National Forest land) with geothermal potential.

## Activity: Energy and Minerals Management

### Subactivity: Oil and Gas Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015

<b>Abandoned Wells Remediation Fund</b>	\$000	10,000	36,000	0	-36,000
	FTE	0	0	0	+0

**Notes:**

- Energy Act Permit Processing Fund amounts are shown as new budget authority derived from 50 percent of rents from onshore mineral leases for oil and gas, coal, and oil shale on Federal lands; Section 365 of the Energy Policy Act of 2005 (Public Law 109-58) appropriates these funds on a permanent basis. More information on Energy Act Permit Processing Fund is found in the Permanent Operating Funds chapter

- Energy and Minerals Cost Recovery amounts are shown as new budget authority derived from fees that include costs of actions such as environmental studies performed by the BLM, lease applications, and other processing related costs; Independent Offices Appropriations Act (IOAA), as amended (31 USC 9701), Section 304(a) of the Federal Land Policy and Management Act of 1976, as amended (43 USC 1734) appropriates these funds on a current basis. More information on Energy and Minerals Cost Recovery is found in the Service Charges, Deposits, & Forfeitures chapter

- Abandoned Wells Remediation Fund amounts are shown as new budget authority derived from General Fund; Section 349 of the Energy Policy Act of 2005 (Public Law 109-58), as amended by Public Law 113-40, the Helium Stewardship Act of 2013 (42 USC 15907) appropriates these funds on a permanent basis. More information on Abandoned Wells Remediation Fund is found in the Abandoned Wells Remediation Fund chapter

- Amount in 2014 and 2015 for Energy Act Permit Processing Fund and Abandoned Well Remediation Fund shown net of sequestration

- Actual and estimated obligations, by year for Abandoned Wells Remediation Fund are found in President's Budget Appendix under the BLM section

## Justification of 2016 Program Changes

The Oil and Gas Management subactivity table above has been expanded to show all current appropriations and offsetting fees requested for the Oil and Gas Program. This includes a separate line for Oil and Gas Inspections Activities for comparison of this funding relative to the budget presentation in the 2015 appropriations support table. These funding resources are further augmented by an estimated \$56.9 million in permanent appropriations authorized by the National Defense Authorization Act (NDAA) of 2015. The total of all these funding resources represents a \$29.1 million, or 20 percent, increase for BLM's Oil and Gas Program over the 2015 level. The permanent funding is deposited into BLM's Permit Processing Improvement Fund and is further discussed in the Permanent Operating Funds chapter.

The 2016 budget request for the Oil and Gas Management subactivity is \$59.7 million, and 331 FTE, a program change of +\$5.6 million and -16 FTE and an internal transfer of -\$11,000 and 0 FTE from the 2015 enacted level. The request for current appropriations includes an additional \$7.1 million (and 41 FTE) that will be covered by the 15 percent of APD fees authorized by the National Defense Authorization Act of 2015. This \$7.1 million in requested appropriations, plus the 85 percent of APD fees permanently appropriated by the NDAA (estimated at \$40.4 million and shown in the Permanent Operating Funds chapter) replace the \$32.5 million in APD offsetting collections provided in the 2015 appropriations bill. Due to the availability of this mandatory funding, total discretionary program resources requested for the Oil and Gas program, including fee-based funding, is \$114.8 million, a program decrease of -\$12.9 million from the 2015 enacted level. The budget proposes to offset this request with \$48.0 million in

offsetting fees for a net total of \$66.8 million for Oil and Gas Management. Following are the individual program change descriptions.

**Master Leasing Plans (+\$5,757,000/0 FTE)** – The 2016 budget request includes an increase of nearly \$5.8 million to fund the development of oil and gas master leasing plans (MLPs) that are currently in process or are scheduled to begin in 2016. The BLM typically prepares MLPs in areas where the BLM anticipates high interest for leasing and there are potential conflicts with other natural resources. The MLPs build upon Resource Management Plan decisions by providing a more focused and detailed analysis, including an analysis of optimal lease parcel configurations and potential development scenarios; identifying and addressing resource conflicts and associated environmental impacts; and identifying mitigation strategies and constraints. Through the MLP process, the BLM analyzes and resolves these issues prior to conducting lease sales; therefore, the MLPs will provide oil and gas operators increased regulatory certainty when obtaining and developing lease parcels. The requested funding will be used to complete or begin MLPs within the BLM Utah, New Mexico, Colorado, and Wyoming State offices.

**Enhance Capacity of Oil and Gas Pilot/Project Offices (+\$3,000,000/+25 FTE)** – In addition to authorizing APD fees for 2016 through 2026, the NDAA also permanently extends BLM access to mineral lease rent revenues deposited in the Permit Processing Improvement Fund, which have been a significant source of funding for the BLM Pilot Offices established under the Energy Policy Act (EPAAct) of 2005. Under EPAAct, BLM's access to these mandatory rent revenues was set to expire at the end of fiscal year 2015. The budget estimates that \$16.1 million in rental receipts will be deposited in the PPIF in 2016, an increase of \$702,000 over the 2015 estimate. Given the heavy workload and increasing need for the BLM to support increased domestic oil and gas production, the budget proposes to not only sustain, but enhance the capacity of current and future oil and gas pilot/project offices with an additional \$3.0 million in requested current appropriations. Current funding levels for pilot offices and other energy-intensive district and field offices have not kept pace with the increasingly time-consuming and complex work associated with processing current APDs. The requested funding will help the BLM reduce the backlog of APDs, address stronger wellbore integrity needs through implementation of the hydraulic fracturing regulation, and allow the BLM to address the complexities related to longer horizontal well completions. This will require better technical knowledge, training and a need to replace departing engineers due to retirement or other career moves. The goal of the added program capacity is to accelerate the processing times of APDs and other use authorizations.

**Automated Fluid Minerals Support System Modernization (+\$4,000,000/0 FTE):** The 2016 budget request includes an increase of \$4.0 million to complete the final phase of the information technology modernization project to update the 19-year old Automated Fluid Minerals Support System (AFMSS). The AFMSS system is used for the collection, management, and sharing of information on authorized use of fluid minerals (e.g. oil, gas, geothermal and helium), including the issuance of drilling permits and collection of inspection and enforcement data across Federal and Indian onshore operations. The new system will automate workflows to be consistent with BLM standards and will minimize the need for manual data entry, thereby improving data quality. The first phase of the project, automating the Notice of Staking and APD processes, has been implemented as a pilot and will be implemented throughout the Bureau in 2015. In FY 2015, the BLM will also complete the second stage of the project, which will phase out the current system and automate the collection of inspection data via tablet computers. The funding increase of \$4.0 million requested as part of the FY 2016

President's Budget will be used for completing the final phase that will automate processes not supported by the current system, allowing BLM employees to gather and evaluate a wider range of information in a more efficient manner. AFMSS is used by other bureaus including the Bureau of Indian Affairs, the U.S. Forest Service, and Interior's Office of Natural Resources Revenue. The BLM plans to make use of the lessons learned from its modernization of the AFMSS and continue to coordinate with these bureaus, the Department's Chief Information Officer, and other bureaus and offices to ensure that related systems are fully integrated and sharing data where possible.

**Transfer to National Conservation Lands (-\$11,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$11,000 will be transferred from Oil and Gas Management Program. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

**Oil and Gas Permit Processing from Fee Collections (net change of -\$25,375,000/-234 FTE)** – As noted above, Section 3021 (d) of the National Defense Authorization Act, 2015 amended the Mineral Leasing Act to authorize APD fees in 2016 through 2026 and to permanently appropriate the majority of these fee revenues in order to process applications for permits to drill (APDs). As a result, the offsetting collection currently provided in the annual appropriations language is no longer required in 2016. The NDAA sets the APD fee at \$9,500 (to be adjusted annually for inflation), an increase of \$3,000 over the current \$6,500 per APD fee set in the 2015 appropriations act. The budget estimates that the \$9,500 APD fee will generate \$47.5 million in revenues in 2016. For FYs 2016 through 2019, the NDAA permanently appropriates only 85 percent of this amount (estimated at \$40.4 million in 2016), leaving the other 15 percent of fee revenues subject to appropriation. As noted above, the budget request for current appropriations includes the remaining \$7.1 million, or 15 percent, in estimated APD fee revenues. The net change of -\$25.4 million reflects the difference between the \$32.5 million provided in offsetting collections in 2015, and a current appropriation of \$7.1 million in 2016 that will be covered by the 15 percent of APD fees proposed to be appropriated as part of the 2016 Interior appropriations bill.

**Oil and Gas Inspection Activities (Net program change of +\$6,874/+15 FTE):** The 2016 budget request proposes to institute new onshore oil and gas inspection fees to cover the costs of BLM's inspection activities and reduce the net cost to taxpayers of operating BLM's oil and gas program. The estimated \$48.0 million in collections generated from the inspection fees will reduce the need for direct appropriations for the program by -\$41.1 million while also providing for an increase of \$6.9 million above the amount appropriated in 2015 for this critical BLM management responsibility. The increased funding is aimed at correcting deficiencies identified by the Government Accountability Office in its February 2011 report, which designated Federal management of oil and gas resources, including production and revenue collection, as high risk. The BLM will also complete more environmental inspections to ensure environmental requirements are being followed in all phases of development. The fees are similar to those already in place for offshore operations. Proposed appropriations language to implement the fees is included in the proposed General Provisions for the Department of the Interior, and is shown below for convenience.

SEC. 114. (a) In fiscal year 2016 the designated operator of each lease on Federal or Indian lands, or each unit and communitization agreement that includes one or more Federal or Indian leases, that is subject to inspection under 30 U.S.C. 1718(b), and that is in force at the start of fiscal year 2016 shall pay a nonrefundable inspection fee that the Bureau of Land Management (BLM) shall collect and deposit in the "Management of Lands and Resources" account.

(b) Fees for 2016 shall be:

- (1) \$700 for each lease or unit or communitization agreement with no active or inactive wells, but with surface use, disturbance or reclamation;
- (2) \$1,225 for each lease or unit or communitization agreement with 1 to 10 wells, with any combination of active or inactive wells;
- (3) \$4,900 for each lease or unit or communitization agreement with 11 to 50 wells, with any combination of active or inactive wells; and
- (4) \$9,800 for each lease or unit or communitization agreement with more than 50 wells, with any combination of active or inactive wells.

(c) BLM will bill designated operators within 60 days of enactment of this Act, with payment required within 30 days of billing.

(d) If the designated operator fails to pay the full amount of the fee as prescribed in this section, BLM may, in addition to utilizing any other applicable enforcement authority, assess civil penalties against the operator under 30 U.S.C. 1719 in the same manner as if this section were a mineral leasing law as defined in 30 U.S.C. 1702(8).

## Legislative Changes

**Federal Oil and Gas Reforms** - The 2016 budget includes a package of legislative reforms to bolster and backstop administrative actions being taken to reform management of Interior's onshore and offshore oil and gas programs, with a key focus on improving the return to taxpayers from the sale of these Federal resources and on improving transparency and oversight. Proposed statutory and administrative changes fall into three general categories: (1) advancing royalty reforms; (2) encouraging diligent development of oil and gas leases; and (3) improving revenue collection processes.

Royalty reforms include evaluating minimum royalty rates for oil, gas, and similar products, adjusting the onshore royalty rate, analyzing a price-based tiered royalty rate, and repealing legislatively-mandated royalty relief. Diligent development requirements include shorter primary lease terms, stricter enforcement of lease terms, and monetary incentives to get leases into production through a new per-acre fee on nonproducing leases. Revenue collection improvements include simplification of the royalty valuation process, elimination of interest accruals on company overpayments of royalties, and permanent repeal of Interior's authority to accept in-kind royalty payments. Collectively, these reforms will generate an estimated \$2.5 billion in revenue to the Treasury over 10 years, of which approximately \$1.7 billion will result from statutory changes. Many States will benefit from higher Federal revenue sharing payments as a result of these reforms.

**Repeal Geothermal Payments to Counties** - The Administration proposes to repeal Section 224(b) of the *Energy Policy Act of 2005*. Prior to passage of this legislation, geothermal revenues were split between the Federal government and States, with 50 percent directed to States, and 50 percent to the Treasury. The *Energy Policy Act of 2005* changed this distribution beginning in 2006 to direct 50 percent to States, 25 percent to counties, and for a period of five years, 25 percent to a new BLM Geothermal Steam Act Implementation Fund. The allocations to the new BLM geothermal fund were discontinued a year early through a provision in the 2010 Interior Appropriations Act. The repeal of Section 224(b) will permanently discontinue payments

to counties and restore the disposition of Federal geothermal leasing revenues to the historical formula of 50 percent to the States and 50 percent to the Treasury. This results in estimated savings of \$4.0 million in 2015 and \$47 million over ten years.

## Program Overview

### Program Components

The BLM's Oil and Gas Management Program is responsible for providing access to onshore energy resources in an environmentally responsible manner. The BLM manages approximately 47,000 Federal onshore leases scattered across 34 States – these leases typically generate over \$3.0 billion in revenues each year. In addition, BLM manages operations on roughly 4,500 oil and gas leases on behalf of tribes and individual Indian mineral owners.

The primary components of the program are the leasing phase, the well permitting phase, and oversight of operations including inspections and enforcement of ongoing operations as well as reclamation and abandonment activities. Another important function is the BLM's Fiduciary Trust Responsibility to Indian Tribes.

During FY 2014, the BLM placed priority on conducting inspections of high-priority wells, and on addressing the recommendations of the Government Accountability Office and DOI's Office of the Inspector General. The BLM is also in the process of completing final regulations that would govern the use of hydraulic fracturing techniques on Federal and Indian lands.

Specific activities include:

#### Leasing

- Conduct oil and gas lease sales, primarily across the West and in Alaska, consistent with land use plans and requirements for public participation; and
- Administer existing oil and gas leases and process post-lease actions such as assignments, operating rights, mergers, bonds, unit and communitization agreements, and terminations of leases.

#### Permitting

- Process oil and gas APDs and subsequent modifications of the permits, by evaluating and prescribing conditions for both the subsurface and surface operations.
- Maintain an inventory of 5,900 valid approved APDs ready for industry to drill.

#### Inspection Activities

- Inspect existing oil and gas authorizations, roughly 32,000 annually; determine the adequacy of operators' financial bonding, with a review of risk factors to weigh potential liability; and evaluating well inventories in the field to address inactive wells. The BLM uses a risk-based inspection strategy and is focused on inspecting 100 percent of the high priority wells, as designated by BLM's risk-based inspection strategy.
- Inspect producing oil and gas wells and ensure proper reporting of production.
- Take enforcement actions to ensure compliance with terms and conditions of leases, APDs, and other authorizations. This includes compliance with environmental conditions and identifying Drilling Without Approval or trespass wellbores.

- Approve reservoir management agreements to provide for the orderly development of oil and gas fields.
- Evaluate oil and gas fields for drainage (fluid minerals on Federal land removed through a well on adjacent private land), and taking administrative actions, if necessary, to protect Federal mineral interests.
- Protect the environment by plugging and reclaiming orphan oil and gas wells drilled by previously existing oil and gas companies; remediating the Alaska Legacy Wells originally drilled by the Federal Government (U.S. Navy and U.S. Geological Survey); and ensuring plugging of the shallow coalbed methane wells in the Powder River Basin of Wyoming.

#### Fiduciary Tribal Trust Responsibilities

- Carry out trust responsibilities by managing operational activities on approximately 3,700 oil and gas leases for Indian Tribes and individual Indian allottees.
- Provide technical advice on leasing and operational matters to the Bureau of Indian Affairs, Indian Tribes, and individual Indian mineral owners.

#### High Risk Program Designation and Other Program Recommendations

In a February 2011 report, the Government Accountability Office (GAO) designated Federal management of oil and gas resources, including production verification and revenue collection, as high risk because the Department of the Interior did not have reasonable assurance that it was collecting its share of revenue from oil and gas produced on Federal lands; continued to experience problems in hiring, training, and retaining sufficient staff to provide oversight and management of oil and gas operations on lands and waters; and was engaged in a broad reorganization of both its offshore oil and gas management and revenue collection functions.

The BLM takes seriously the observations and recommendations of the GAO and OIG, and has taken a number of steps to improve program effectiveness in these areas, although some of these activities were limited by the decrease in funding in FY 2012 and 2013. The BLM is implementing recommendations of the GAO to correct and improve the inspection and enforcement program and continue oversight guidance to coordinate across office boundaries. An internal control review conducted by the BLM is assisting in this effort. The objective is to provide accurate and complete data in the records, plus provide oversight that the data is sufficient to ensure orderly development and accounting of the Nation's finite energy mineral resources.

#### Inspection Activities

The BLM performs several different types of oil and gas inspections in an effort to ensure that the American people receive the benefit of the natural and mineral resources on their lands and to ensure that those resources are managed in an environmentally responsible manner. With higher funding levels provided in 2014, the BLM focused on completing the high priority production inspections, as determined by the risk-based strategy, and as much of the lower priority inspections as the residual funding would allow. These high-priority cases account for about 13 percent of the total wells, but more than 60 percent of the oil and gas produced on Federal and Indian mineral estates. The BLM's inspection workload has risen due to increases in the number of active wells.

### Production Inspections

The BLM conducts inspections on production facilities to ensure that equipment, practices and procedures are in accordance with the regulations, Orders and any applicable approval documents. Historically, the BLM has conducted two categories of production inspections: high production case inspections required by the *Federal Oil and Gas Royalty Management Act* (FOGRMA) and other production inspections. The FOGRMA requires the BLM to perform at least one inspection annually at each lease site producing or expected to produce significant quantities of oil or gas in any year.

In the past, the BLM prioritized leases to ensure that the leases were inspected based on production levels (i.e., FOGRMA high-production leases were inspected first). In FY 2011, the BLM initiated a risk-based strategy for prioritizing production inspections to improve upon this system. The BLM plans to expand this risk-based strategy to the other types of inspections as soon as the BLM develops risk factors to track in AFMSS, the inspection activity database. The risk-based strategy will help the BLM maximize the use of a limited inspection staff to better meet its inspection goals and requirements in the future. The BLM will continue to recruit and train new inspectors in order to be able to meet its minimum inspection requirements going forward and more effectively target inspection resources to meet other inspection goals established by BLM policy. The BLM also will continue to use qualified natural resource specialists to conduct environmental inspections and improve reclamation practices that minimize disruptions and impacts to habitat and to enable the certified petroleum engineering technicians to concentrate on production verification inspections.

The BLM conducted 2,483 high-priority production inspections in 2014. The BLM focus on high priority production reduced overall coverage for other inspection types, including drilling inspections and low priority production cases. The BLM has developed the risk-based inspection priorities for FY 2015. These priorities again include achieving 100% of all high-priority production as well as other high priority designated inspections, including idle well, drilling, abandonment, workover and environmental inspections.

### Drilling Inspections

The BLM conducts time sensitive inspections on wells at key points during the well drilling, with an emphasis on witnessing high priority drilling cases first. The goal of the inspections are to ensure that equipment, practices, and procedures comply with applicable regulations, orders, notices, lease stipulations and conditions of approval.

### Abandonment Inspections

The BLM conducts abandonment inspections to witness the plugging of oil and gas wells to ensure wellbore integrity and zonal isolation of underground formations, with an emphasis on high priority abandonment cases. These inspections are also time sensitive and include depleted producing wells or newly drilled dry holes.

### Workover Inspections

The BLM inspects workover operations on existing wells that are producing, or nearly depleted and service wells. The goal of the inspections is to ensure that equipment, practices, and procedures are in accordance with the conditions of approval.

### Environmental Inspections

Natural Resource Specialists, Environmental Scientists, or other resource program specialists (wildlife biologists, archaeologists, etc.) typically perform BLM environmental inspections.

Environmental inspections include inspection of reclamation efforts, erosion control measures, topsoil stockpiling, well location, access road, pit construction and use, spills, water disposal methods, containment systems for production tanks and surface hazards. Environmental inspections also include inspections to ensure abandoned locations are properly reclaimed and post approval inspections look specifically at surface environmental impacts. They do not include onsite inspections conducted prior to the APD being approved. The BLM identifies the high priority environmental cases for inspection emphasis.

#### Records Verification Inspections

The BLM uses records verification inspections to review production records and compare them to production reports sent to the Office of Natural Resources Revenue. These inspections may not require additional review with onsite visits.

#### Undesirable Event Inspections

The BLM conducts undesirable event inspections when spills or accidents occur on an oil and gas lease.

#### Alleged Theft Inspections

When an alleged theft of production is reported to a BLM Field Office by an operator or the public, the BLM conducts an alleged theft inspection.

#### Idle Well Inspections

The BLM conducts idle well inspections of wells that have had zero production reported for the previous 7 years. These inspections may result in orders to the operator to perform specific actions.

The table below shows a breakout of inspections completed in 2011-2014 and those estimated for 2015 and 2016.

**Inspections Completed and Estimated**

	<i>FY 2011 Completed</i>	<i>FY 2012 Completed</i>	<i>FY 2013 Completed</i>	<i>FY 2014 Completed</i>	<i>FY2015 Estimated</i>	<i>FY2016 Estimated</i>
<b><i>Production Inspections</i></b>						
<i>1. High-Risk Cases<sup>1</sup></i>	2,606	2,148	2,083	2,483	1,750	1,750
<i>2. Other Production</i>	4,938	5,126	3,330	3,749	5,050	5,250
<b><i>Total Production Inspections</i></b>	<b>7,544</b>	<b>7,274</b>	<b>5,413</b>	<b>6,232</b>	<b>6,800</b>	<b>7,000</b>

<i>6. Undesirable Event Inspections<sup>2</sup></i>	476	467	385	605	400	400

<b>7. Alleged Theft Inspections<sup>2</sup></b>	4	0	0	0	0	0
<b>8. Idle Well Inspections</b>	N/A	N/A	1,257	1,171	1,000	1,050
<b>Total Other Inspections</b>	25,689	27,297	27,842	25,570	26,800	27,500
<b>Total Inspections<sup>3</sup></b>	33,233	34,571	33,255	31,802	33,600	34,500

<sup>1</sup>In 2011, the BLM instituted a risk-based strategy for production inspections. This category consists of wells and leases that meet BLM's high-risk criteria. Based on this strategy, each year's list of required high-risk cases is determined based on the previous year's history. For this reason, the actual quantity of required high-risk inspections cannot be determined until the previous year is complete. The FY 2015 and FY 2016 estimated numbers are based on assuming the BLM completes 100% of required high-risk inspections

<sup>2</sup>These inspections are conducted on an as-needed basis.

<sup>3</sup>This table combines inspections on cases and inspections on individual wells.

Note: FY2014 saw a Federal shutdown loss of available time impacting nearly 3 weeks of operation (over 1500 inspections lost). FY 2015 reflects the proposed added inspection capacity.

## Critical Factors

The primary critical factors impacting the program are:

- As production activity increases, the BLM must increase the number of oil and gas inspections and increase efforts to ensure appropriate accountability of production volumes across the over 23,500 producing leases.
- An expanded well inventory and more complex operations require the BLM to have more vigilance to provide compliance credibility and ensure public safety as well as protection of other natural resources, including important species and habitat conservation.
- The BLM faces challenges with technical employee recruitment, training, and retention, as current staff retires and the program competes with higher salaries often offered by private industry and other agencies. The BLM is assessing a range of options for addressing these recruitment and retention challenges. As a means of attracting and retaining qualified employees, the BLM has utilized pay differential authority for petroleum engineers and petroleum engineering technicians, as provided in the 2014 Omnibus Appropriations Act and is working with OPM on a longer-term administrative solution for priority positions.
- Automation of activities in the new AFMSS, especially inspections, will increase the productivity of BLM staff. In addition, providing modern tools and capabilities will support recruitment and retention.
- The BLM must review and analyze environmental documents which include increasingly complex environmental issues and sophisticated field operations; impacts, and mitigation plans for land use plans, lease sales, APDs, and subsequent production operations.
- The BLM responds to Freedom of Information Act requests, protests, appeals, and litigation which limit the staff availability to complete the comprehensive adjudication of leases and permits.
- Proper documentation of well operations from 93,500 active wells in the AFMSS database and official paper files remains a challenge especially as most of the tracking program was built in 1997. The BLM is improving AFMSS to automate all post-lease activities, including the automation of all data on operations and inspections.
- Constrained program funding and key senior staff losses in recent years dampened program progress and impeded BLM's ability to maintain critical coverage with staff,

travel and training. In FY 2014, the Federal Government shutdown impacted nearly three weeks of operation.

#### Performance Measures

The BLM consistently tracks the number of inspections completed to ensure that oil and gas production on public land is carried out in an environmentally responsible manner while generating a fair revenue return for the American people.

The BLM is using a Strategic Plan measure that tracks the percent of leases where production verification has occurred. The new measure will compare the total number of cases against the number of production and records verification inspections completed on those cases annually. Prior to the establishment of this measure, the BLM tracked the number of inspections completed on both wells and cases using the total number of required inspections as a baseline.

The older measure was ineffective in two ways. First, a single case may have multiple wells and therefore the denominator may have been under-inclusive in that it combined what should have been multiple units into a single unit and, conversely, the measure may have also been over-inclusive in that it included multiple wells when only a single "case" inspection was carried out. Second, the numerator included all inspections, while the denominator only included required inspections, this resulted in multiple years in which more than 100 percent performance was reported since required inspections is a subset of total inspections.

#### **Processing of Applications for Permit to Drill**

The complexity and unit cost of processing APDs has grown in recent years, with more down hole and surface resources analysis, and the need to address protests and appeals from interest groups. The BLM received 5,316 APDs in 2014. BLM approval times have increased or remained high due to the increased complexity of resource issues analyzed in environmental documents, in addition to industry turnover of their permitting specialists. The BLM has worked with operators to improve the quality and completeness of submitted packages. The new AFMSS NOS/APD module should facilitate submittal of more complete APDs as well as speed the BLM review process.

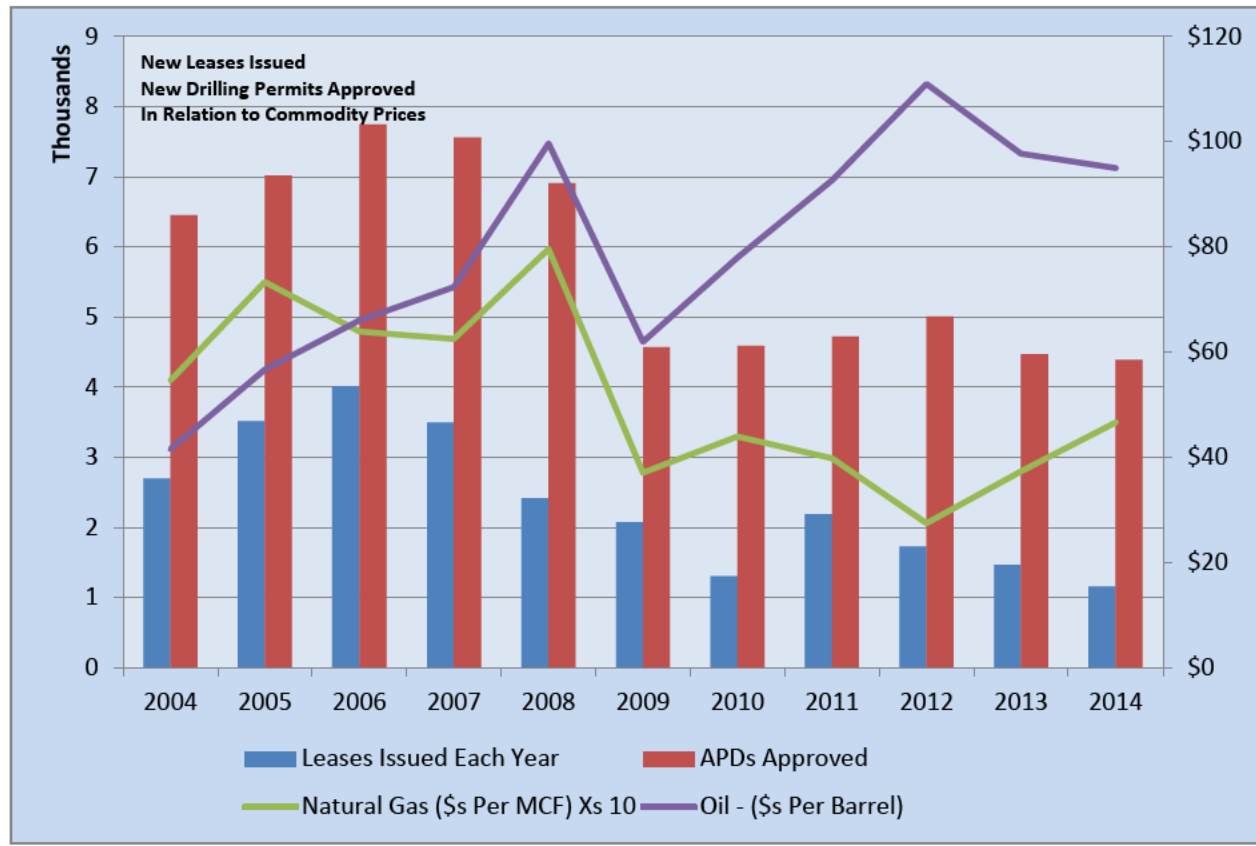

As shown on the table below, the number of approved APDs available for industry drilling is expected to remain strong at 5,800 annually.

**APDs: Pending, Received, Approved, Processed and Available to Drill**

	2011 Actual	2012 Actual	2013 Actual	2014 Actual	2015 Estimated	2016 Estimated
Total APDs pending at start of year	4,580	4,108	3,683	3,546	4,121	4,021
New APDs received	4,728	5,240	4,757	5,316	5,000	5,000
APDs approved	4,725	5,009	4,472	4,389	4,600	4,800
Total APDs processed	5,200	5,861	4,892	4,924	5,200	5,400
APDs pending at year end	4,108	3,683	3,546	4,121	4,021	3,621
APDs approved, waiting to be drilled	7,226	6,960	6,711	5,919	5,700	5,500

APDs pending at the end of the year are a snapshot at that point in time and do not account for permits that remain in process at the end of the fiscal year.

The chart below illustrates the relationship between the prices for oil and gas and leasing and permitting activity from 2004-2014. Leasing and permitting demand is significantly influenced by oil and gas prices.

## BLM Onshore Leasing Reforms

Onshore fossil fuels will continue to make an important contribution in fulfilling the Nation's energy needs, but development of these resources needs to be conducted responsibly. In May 2010, the BLM finalized several reforms to its oil and gas program to improve environmental protection of important natural resources on public lands while aiding in orderly leasing with measured and balanced development of these resources. The reforms establish a more rigorous, open, consistent, and environmentally sound process for leasing and developing oil and gas resources on public lands. These reforms and parcel screenings (including a boots-on-the-ground view of resource concerns for each parcel) helped to reduce potential conflicts that can lead to costly and time-consuming protests and litigation of leases. The BLM also shifted some resources away from leasing during recent years given the reduced program funding in 2012 and 2013, and the pressing need to cover existing inspection responsibilities for the 47,000 onshore leases. Nonetheless, the BLM hosted 26 lease sales in 2014.

Under the reformed leasing policy, the BLM will expand upon efforts to:

- Engage the public and stakeholders in the development of MLPs prior to leasing in certain areas with important environmental resource values and where new oil and gas development is anticipated. The intent is to fully consider other important environmental resource values before making a decision on leasing and development in an area; and
- Ensure potential lease sales are fully coordinated, both internally and externally, including public participation, and interdisciplinary review of available information, as well as on-site visits to parcels prior to leasing when necessary to supplement or validate existing data.

In June 2014, the BLM issued its first MLP, the Beaver Rim MLP, as part of the revision of the Lander Resource Management Plan. The Beaver Rim MLP was designed to promote smart planning, with the help of a wide range of stakeholders. This MLP balances development of oil and gas minerals with protection for important natural and cultural resources, such as habitat for elk and mule deer and important archaeological sites. Several BLM field offices are developing MLPs in their current RMP efforts.

## 2016 Program Performance

The percentage of leases with approved APDs is expected to increase slightly due to an overall decrease in the number of active leases. The percentage of APDs processed is expected to reach 55 percent, a slight increase from previous levels. The percentage of producing fluid mineral cases that have a completed inspection is expected to decrease in 2015 as the BLM continues focus on select high priority inspection cases.

## Activity: Energy and Minerals Management

### Subactivity: Coal Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Coal Management	\$000	9,595	9,595	+173	+0	+1,100	10,868	+1,273
	FTE	66	66	+0	+0	+0	66	+0

Summary of 2016 Program Changes/Internal Transfers for Coal Management:		(\$000)	FTE
Mineral Tracking System		+1,100	+0
<b>Total</b>		<b>+1,100</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Coal Management activity is \$10,868,000 and +66 FTE, a program change of +\$1,100,000 and 0 FTE from the 2015 enacted level

**Mineral Tracking System (+\$1,100,000/0 FTE):** The 2016 budget request includes an increase of \$1.1 million in the Coal Management program. This increase, combined with the request for a \$1.1 million increase in the Other Minerals Resources Management program, will be used to develop the Mineral Tracking System (MTS). The funding for the MTS will be used to support the automation and tracking of licenses, leases and permitting as well as inspection activities, including production verification, associated with coal and other solid mineral commodities (e.g. phosphate, sodium, potassium, etc.). Similar to the BLM's modernization of its Automated Fluid Minerals Support System (AFMSS), the MTS is intended to enhance the overall management of very complex solid mineral commodity permitting and leasing regimes. This complexity is due in part to the number of different mineral commodities, the different extraction technologies, and the breadth of laws and regulations governing their management. The BLM has successfully completed a pilot effort of the MTS system for the coal program in its Utah and Wyoming offices, and with the additional funding, the BLM can make the system available for all permitting, leasing, inspection and other activities for the coal and other solid mineral commodity programs across the BLM. When fully developed, the MTS will be used by the BLM to track leases, licenses and inspection activities, and by Interior's Office of Natural Resources Revenue, to track its production verification activities. The system will help the BLM respond to various Government Accountability Office and the Office of Inspector General audit recommendations. The BLM plans to make use of the lessons learned from its modernization of the AFMSS and continue its work and coordination with the Department's Chief Information Officer, other bureaus and offices to ensure to the extent possible, related systems are fully integrated and sharing data.

### Program Overview

#### Program Components

The BLM is responsible for leasing the Federal mineral estate on approximately 700 million acres. Over the last decade (2004-2013), 46 percent of the Nation's electricity was generated

using coal. During this same period, more than 41 percent of that coal was produced on Federal lands managed by the BLM.

The BLM's coal program consists of approximately 309 Federal coal leases and 474,025 acres under lease. During the last decade:

- Over 4.54 billion tons of coal were produced from Federal leases with a total value of \$58.6 billion;
- Over \$3.5 billion in bonus payments and over \$6.3 billion in royalties, rents, and other revenues were collected on BLM administered coal leases; and
- The BLM held 46 successful coal lease sales, accepted bonus bids of over \$4.5 billion (deferred bonus bid payments occur over five years) for over 89,430 acres containing 5.3 billion tons of mineable coal.

BLM's leasing program supports private sector development intended to replace already mined reserves and continue to provide the Nation with a reliable domestic energy source and.

In 2014, the BLM completed a number of actions to strengthen the overall management of its coal program, while at the same time responding to recommendations from three key sources: the June 2013 audit by the Department of the Interior Office of Inspector General; a February 2014 Government Accountability Office report; and the Royalty Policy Committee Report *Mineral Revenue Collection from Federal and Indian Lands and the Outer Continental Shelf*, which provided a number of recommendations on improving production accountability.

The BLM completed a major update of policies regarding production accountability, verification, and inspection, through the release of a new Inspection, Enforcement and Production Verification manual and an Inspection and Enforcement handbook. This manual and handbook provide policy and guidance regarding safety, inspections, and production verification. The guidance will help promote more responsible development of coal resources on the Nation's public lands, and includes requirements for improved documentation for coal operation inspections on coal exploration licenses, licenses to mine, leases, and logical mining units. It also includes requirements for increased training for Mineral Mine Inspectors and requirements for certification of the inspectors. The pilot phase of the MTS for the coal program is further enhancing the inspection program, and the full implementation of that system will enable further progress in this area.

The BLM also updated the Evaluation manual and handbook, which will help ensure a consistent and efficient coal lease sale process, increase clarity in determining fair market value and provide guidance on the independent review of appraisal reports. This guidance will enable the Bureau to account for export potential through analysis of comparable sales and income. In developing this guidance, the BLM worked closely with the Department's Office of Appraisal Services, Division of Mineral Evaluations, and that office will serve as the independent reviewer of BLM determinations of the pre-sale estimate of the value of the coal.

Taken together, these updated and revised policies on inspections, enforcement, production verification and coal valuation will significantly strengthen the Bureau's coal program and enhance the skills, knowledge and abilities of its employees as they carry out their responsibilities to ensure leasing and development of the Nation's resources are carried out in an environmentally sound and sustainable manner, with a fair return to the American taxpayers.

The BLM is responsible for the following activities in the Coal Management program:

- Conducting competitive coal lease sales and ensuring the public receives fair market value for the coal;
- Determining the pre-sale estimate of the value of the coal by considering both domestic and export markets, among other factors, and obtaining an independent review of the value;
- Conducting sales to modify existing coal leases and ensuring the public receives fair market value for the coal;
- Administering existing coal leases and providing additional approvals to ensure the lessee's compliance with the terms and conditions of the lease;
- Processing and approving coal exploration licenses and monitoring operations for compliance with the terms of the exploration licenses;
- Processing and approving coal resource recovery and protection plans and modifications to protect the public's resources from waste and to ensure maximum economic recovery;
- Inspecting operations at Federal and Indian coal use authorizations to ensure compliance with the authorization's terms and conditions and to ensure the greatest ultimate recovery;
- Independently verifying the coal production reported by lessees from Federal and Indian coal leases;
- Taking appropriate action when Federal coal has been mined without approval (coal trespass actions);
- Taking enforcement actions to ensure compliance with terms and conditions of licenses, leases, and other BLM coal authorizations; and
- Providing pre-lease evaluations of mineral tracts when requested by the Bureau of Indian Affairs for Indian Tribes and Indian mineral owners.

### **Critical Factors**

Much of the Federally owned coal resources in the Western U.S. are overlain by private surface ownership. Before the BLM can hold a lease sale for Federally owned coal for mining via surface techniques, the potential lessees must obtain the consent of the surface owners. The BLM encourages surface owners (overlying Federally owned coal) to participate in the BLM's land use planning processes and encourages lease applicants to acquire surface owner consent prior to submitting the lease application to the BLM.

The BLM continues to work with the U.S. Forest Service, the Office of Surface Mining Reclamation and Enforcement, and other Federal and State agencies to streamline multiple agency processes to minimize the time necessary to process applications to explore for and produce Federal coal resources. Federal surface management agencies are required to provide the BLM their decision whether to lease Federal coal or not.

The BLM and the Mine Safety and Health Administration are collaborating to provide a safer workplace for developing Federal and Indian coal.

The BLM faces a potential loss of institutional knowledge needed to manage the Coal Program as many of its engineers, geologists, and land law adjudicators retire or become eligible for retirement. Recruitment activities are ongoing to fill vacancies. Further, the BLM works to prepare new employees to accomplish coal workloads successfully by ensuring that mining

engineers and geologists complete the new mine employee's safety training, attend certification courses, and are provided with adequate on the job training.

Ensuring environmental protection and maximum recovery of coal resources continues to be a priority for the BLM.

### Other Funding Sources

The Coal program is primarily funded through this subactivity. Another funding source is the service charges the BLM collects from applicants to process coal lease applications, lease modification requests, royalty rate reduction requests, and logical mining unit applications. The BLM has been implementing cost recovery for these applications filed with the BLM since a final cost recovery regulation became effective on November 7, 2005. Amounts that the BLM collects each year vary as the workload varies between applications filed prior to or after the cost recovery regulation became effective. The BLM will continue to charge users all appropriate cost recovery fees according to regulations.

<b>Coal Management Cost Recovery (\$000)</b>	<b>2013</b>	<b>2014</b>	<b>2015 Estimated</b>	<b>2016 Estimated</b>
	381	229	305	305

### 2016 Program Performance

In 2014, the BLM completed 19 of 21 initiatives responding to the Office of Inspector General and Government Accountability Office audits. The initiatives consisted of the development of 2 manuals and 2 handbooks and seven instruction memorandum. In 2015, the BLM will complete the remaining 2 initiatives that are undergoing final review. These documents addressed concerns regarding lease sales, exports, inspection, enforcement, royalty rate reduction, and transparency.

The BLM anticipates completing processing approximately ten percent of the pending coal lease applications, called "Lease by Applications" (LBA) during 2016. In 2013, applicants requested that the BLM delay processing of several LBA actions due to recent reductions in market demand for coal resources; the future market demand for BLM to process additional LBAs is unclear at this time. The U.S. Department of Energy projects that coal use to generate electricity will increase from 1.637 trillion kilowatthours in 2015 to 1,675 trillion kilowatthours in 2040 (Source: Electricity generation by fuel in the Reference case, 1990-2040).

To process LBAs, the BLM will use a single environmental analysis to determine cumulative impacts for multiple LBAs and other use authorizations received in a relatively close geographic area. This will allow for the more efficient use of BLM coal specialists, as they are needed to complete environmental, geological and engineering analyses, coal evaluations, hold lease sales, and process coal lease applications. The BLM completed processing for five percent of coal LBAs in 2009 and 2010, seven percent in 2011, 18 percent in 2012, 14 percent in 2013, and 10 percent in 2014. There are several grouped environmental analyses in progress that will yield multiple lease application process completions in 2015 and 2016.

The BLM completes approximately 2,600 coal inspection, enforcement, and production verification actions each year. Inspections are performed to ensure compliance with the lease

terms and conditions and mining plan approvals. Enforcement actions are necessary where the lessee fails to conform to the lease requirements. During the inspection process, the BLM inspector will collect production data to independently determine if the coal production being reported by the lessee is reasonable. The BLM completes approximately 335 post lease administrative actions annually while managing leases. These post lease actions vary from lease readjustments and lease modifications, to approvals of resource recovery and protection plans. Normally, post lease actions are market dependent.

<b>Activity: Energy and Minerals Management</b> <b>Subactivity: Other Mineral Resources</b>
--

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
<b>Other Mineral Resources</b>	<i>\$000</i>	10,586	10,586	+193	+0	+1,100	11,879	+1,293
	<i>FTE</i>	82	82		+0	+0	82	+0

<b>Summary of 2016 Program Changes/Internal Transfers for Other Mineral Resources:</b>	(\$000)	FTE
Mineral Tracking System	+1,100	+0
<b>Total</b>	<b>+1,100</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Other Mineral Resources activity is \$11,879,000 and 82 FTE, a program change of +\$1,100,000 and 0 FTE from the 2015 enacted level.

**Mineral Tracking System (+\$1,100,000/0 FTE):** The 2016 budget request includes an increase of \$1.1 million in the Other Minerals Resources Program to develop the Mineral Tracking System (MTS). Combined with the request for a \$1.1 million increase in the Coal Management program, this funding for the MTS will be used to support the automation and tracking of licenses, leases and permitting, as well as inspection activities, including production verification associated with coal and other solid mineral commodities. Similar to the BLM's modernization of its Automated Fluid Minerals Support System (AFMSS), the MTS is intended to enhance the overall management of very complex solid mineral commodity permitting and leasing regimes. This complexity is due in part to the number of different mineral commodities, the different extraction technologies, and the breadth of laws and regulations governing their management. The BLM has successfully completed a pilot effort of the MTS system for the coal program in its Utah and Wyoming offices, and with the additional funding, the BLM can make the system available for all permitting, leasing, inspection and other activities for the coal and other solid mineral commodity programs across the BLM. When fully developed, the MTS will be used by the BLM to track leases, licenses and inspection activities, and by Interior's Office of Natural Resources Revenue, to track its production verification activities. The system will help the BLM respond to various Government Accountability Office and the Office of Inspector General audit recommendations. The BLM plans to make use of the lessons learned from its modernization of the AFMSS and continue its work and coordination with the Department's Chief Information Officer, other bureaus and offices to ensure to the extent possible, related systems are fully integrated and share data where possible.

### Program Overview

The public lands are an important source of non-energy solid leasable mineral resources and mineral materials for the Nation. These minerals are vital components of basic industry and quality of life in the United States. The goal of the Other Mineral Resources Program is to provide the minerals needed to support local infrastructure and economic development. Demand is increasing worldwide for some products generated from non-energy solid leasable minerals, such as fertilizers, which are used in producing food, biofuels, and gilsonite, which is

used in drilling fluids for energy exploration. The BLM processes sales and permits for mineral materials, such as sand, gravel, stone, and ordinary clays, which are essential for maintenance and construction of the access that is needed to provide basic land management and for building and maintaining energy development and production infrastructure and facilities.

### Program Components

The Other Mineral Resources Subactivity funds two distinct programs:

- Through the Non-Energy Solid Leasable Minerals Program, the BLM manages the production of potash, phosphate, sodium, and gilsonite. This program also includes metallic minerals on acquired lands (lead, zinc, copper, etc.). These minerals are used for fertilizers, glass and papermaking, flue-gas desulfurization, lead-acid batteries, oil well drilling, water treatment, detergents, and many chemicals.
- Through the Mineral Materials Program, the BLM leases and sells mineral materials such as ordinary clay, sand, gravel, and building stone. These materials are used for construction of roads, foundations, and buildings.

The Non-Energy Solid Leasable Minerals Program is responsible for:

- Processing permit, license and lease applications;
- Administering existing permits, licenses and leases;
- Approving exploration and mining plans;
- Conducting *National Environmental Policy Act (NEPA)* analyses;
- Inspecting and monitoring existing authorizations;
- Inspecting producing operations to ensure proper reporting of production;
- Taking enforcement actions to ensure compliance with terms and conditions of permits, licenses and leases; and
- Administering trust responsibilities by managing post-leasing and production activities for Indian Tribes and individual Indian mineral owners.

The Mineral Materials program is responsible for:

- Performing *NEPA* analyses of disposal applications;
- Performing appraisals to determine the value of disposals;
- Conducting sales;
- Administering existing contracts and collecting revenue;
- Processing free use permits for State and local governments and non-profit organizations;
- Processing exploration permits and mining authorizations;
- Inspecting existing mineral materials authorizations;
- Inspecting sites to ensure proper reporting of and payment for production;
- Taking enforcement actions to ensure compliance with terms and conditions of contracts and authorizations; and
- Investigating and taking enforcement actions on unauthorized removal of mineral materials from Federal mineral estate.

### Critical Factors

Several factors impact the Other Mineral Resources Program. Most demand for mineral materials comes from sales directly to the public and industry for construction and development

of businesses and housing in urban and rural areas, and for the infrastructure for renewable and conventional energy and mineral projects. The level of public demand tends to mirror the state of the economy.

State and local governments and nonprofit organizations are provided free use of sand, gravel, and other mineral materials used in the development and maintenance of infrastructure for communities. The BLM processes these applications at no cost to those entities which involves increased workload for the BLM.

There has been an increase in unauthorized operations, particularly on split-estates, due to many factors, such as an increase in urban development and zoning restrictions reducing private sources of mineral materials. The BLM will continue to conduct inspections to determine if there are unauthorized operations on public lands.

The cost of processing authorizations and leases for mineral materials and non-energy minerals varies for each authorization or lease due to the size and complexity of the each, but in general has risen due to the increasing level of complexity in environmental impacts and the need to design enhanced mitigation.

### **Other Funding Sources**

The Other Mineral Resources Program is primarily funded through appropriations in this subactivity. Other funding sources include cost recovery fees, averaging \$284,000 per year, for processing mineral disposal actions such as mineral material competitive sales. There are also cost recovery fees for processing new applications for non-energy leases, licenses and permits. The BLM will continue to charge users appropriate cost recovery fees according to regulation.

The BLM also receives reimbursement for the costs of material sales for the pipeline system in Alaska as required under Public Law 93-153, Section 101, which amended Section 28 of the *Mineral Leasing Act of 1920*. Funds are also collected from trespass recovery settlements and are used for rehabilitation of damaged property at the trespass site and other sites damaged by past mineral materials operations pursuant to Public Law 94-579, as amended, and Public Law 93-153. Fees are also collected for development, operation and reclamation of mineral materials community pits and common use areas.

## **2016 Program Performance**

Demand for non-energy solid leasable minerals, especially potash, phosphate and hardrock minerals (copper, nickel, etc.) on acquired lands has increased substantially for several years and is expected to continue to increase. Authorizations for non-energy minerals are expected to be issued as long-term NEPA analyses are completed.

The percentage of pending cases of permits and lease and contract applications processed is expected to remain the same for non-energy leasing and for mineral materials contracts in 2016.

The BLM also will continue to issue updated guidance and instructions addressing the valuation of other mineral resources in 2016. BLM will work with OVS to rewrite handbooks and issue other guidance to strengthen the valuation process, increase consistency of procedures among office, correct deficiencies, and improve performance.

**Activity: Energy and Minerals Management**  
**Subactivity: Renewable Energy Management**

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Renewable Energy	\$000	29,061	29,061	+295	+0	+0	29,356	+295
	FTE	144	144		+0	+0	144	+0

### Justification of 2016 Program Changes

The 2016 budget request for the Renewable Energy Management Program is \$29,356,000 and 144 FTE.

### Program Overview

The Renewable Energy Management Program is responsible for processing right-of-way applications for wind energy, solar energy, geothermal energy and renewable energy transmission development. All renewable energy projects proposed for BLM-managed lands receive full environmental reviews under the National Environmental Policy Act (NEPA), including the same opportunities for public involvement as other BLM land-use decisions.

The President has established an aggressive goal to increase permitting of new renewable electricity generation on public lands to 20,000 megawatts (MWs) by 2020. The BLM is committed to contributing to this goal by permitting environmentally responsible renewable energy projects on public lands. State renewable energy portfolios, investment tax credits for solar energy projects, volatile oil prices, and international concern about climate change have all contributed toward public and industry interest in utility-scale solar energy development.

The Renewable Energy Program oversees development of three main energy sources:

- Solar Energy
- Wind Energy
- Geothermal Energy

The BLM and the Department continue to place a high priority on the processing of renewable energy projects on the public lands. Secretarial Order 3285, issued March 11, 2009, established the development of environmentally responsible renewable energy as a priority for the Department. Increased production of renewable energy will create jobs, provide clean energy, and enhance U.S. energy security by adding to the domestic energy supply. As part of the priority goal for renewable energy, the Department and the BLM established an aggressive goal of approving 10,000 megawatts of permitted capacity by the end of 2012. The BLM exceeded this goal by approving a total of 12,862 MWs of renewable energy projects (including connected-action projects) before the end of 2012. With projects approved through January 2015, the BLM has now approved a total of 16,019 MWs of renewable energy projects. This approved capacity has the potential to provide power for more than 4.8 million homes. The BLM will continue to prioritize permitting of renewable energy development on the public lands in a "smart-from-the-start" manner to meet its future permitting goals.

## Solar Energy

Solar radiation levels in the Southwest are some of the best in the world. The BLM manages more than 20 million acres of public lands with excellent solar potential in six States: California, Nevada, Arizona, New Mexico, Colorado and Utah. On October 12, 2012, the Department of the Interior and the Department of Energy, as co-lead agencies, published the Record of Decision (ROD) on the Programmatic Environmental Impact Statement (PEIS) for Solar Energy Development in Six Southwestern States. The Solar PEIS established, for the first time, a solid foundation for long-term, landscape-level planning to help facilitate improved siting of utility-scale solar projects that avoids or minimizes conflicts with important wildlife and cultural and historic resources. The ROD on the Solar PEIS responded to extensive comments on the Supplemental Draft PEIS and includes incentives for solar developers who site projects in solar energy zones, offering reduced permitting times within zones and a sufficiently flexible variance process to allow development of well-sited projects outside of zones. The ROD also makes clear that the Solar Energy Program will continue to incorporate other parallel planning efforts, including State level efforts, to establish additional solar energy zones to meet market demand. The ROD includes 17 solar energy zones, totaling about 285,000 acres potentially available for solar energy development. The BLM has since added two additional solar energy zones through land use planning efforts for the Arizona Restoration Design Project and the West Chocolate Mountains Renewable Energy Evaluation Area in California. More are anticipated with future land use planning efforts.

To date, the BLM has approved 29 solar projects, including both generation projects on public lands and access and transmission projects that are essential to facilitate solar generation projects on private land. The projects include a variety of solar technologies and range in size from a 45-megawatt photovoltaic system on 422 acres to a 750-megawatt parabolic trough system on 7,700 acres. These 29 projects have the potential to generate 8,269 megawatts of clean, renewable energy—enough energy to power over 2.4 million homes.

## Wind Energy

The BLM manages 20.6 million acres of public lands with wind potential and has approved more than 35 wind energy projects capable of producing nearly 5,000 megawatts of clean, renewable energy. The total approved capacity includes both wind energy production facilities on public lands and a number of access and transmission projects on public lands essential to facilitate wind energy production projects on private land.

A PEIS relating to the authorization of wind energy projects was completed in June 2005. This PEIS provides an analysis of the development of wind energy projects in the West. In conjunction with the publication of this PEIS, the BLM amended 52 land use plans to allow for the use of applicable lands for wind energy development. BLM offices are able to use this PEIS as an aid in analyzing impacts for specific applications for the use of public lands for wind energy use. The BLM issued a wind energy policy in December 2008 to provide guidance on best management practices; measures to mitigate potential impacts on birds, wildlife habitat, and other resource values; and guidance on administering wind energy authorizations.

The BLM continues to conduct studies necessary to evaluate and process applications for rights-of-way for the siting of wind energy projects and applications for rights-of-way for electric transmission lines from these projects. There are currently a total of 40 approved wind energy

and transmission connected-action projects on the public lands with a total approved capacity of 5,608 MWs.

### **Geothermal Energy**

The BLM has the delegated authority for leasing on more than 245 million acres of public lands (including 104 million acres of National Forest managed by the U.S. Forest Service) with geothermal potential in 11 western States and Alaska. The BLM currently manages more than 800 geothermal leases, with over 70 leases in producing status generating over 2,000 megawatts of installed geothermal energy on public lands. This amounts to over 40 percent of the total U.S. geothermal energy capacity. In May 2007, the Department of the Interior published final regulations on geothermal energy production on public lands requiring more competitive leasing and offering simplified royalty calculations.

A PEIS to assess geothermal leasing on the public lands was completed in October 2008. The subsequent ROD amended 114 BLM resource management plans and allocated about 111 million acres of Bureau-managed public lands as open for leasing. An additional 79 million acres of National Forest System lands are also legally open for leasing. Currently, the BLM has authorized a total of 48 geothermal projects (72 producing geothermal leases) with a total approved capacity of 2,142 MWs.

### **Competitive Leasing Process**

In 2014, the BLM published a proposed rule for competitive leasing in the Federal Register for public comment and review to begin the process of implementing an innovative strategy to promote renewable energy development at appropriate sites in areas that have been determined in advance to be optimal for wind and solar energy production. The BLM plans to offer these specific parcels to potential applicants through a competitive process and to approve right-of-way applications in an expedited fashion due to the upfront environmental analysis that will be conducted as part of the leasing process. Offering lands through a competitive leasing process will allow BLM to target future development toward low conflict lands close to existing or planned transmission capability.

### **Performance Goals**

The President's and the Secretary's goals to increase smart renewable energy development on public lands, as well as State renewable energy portfolio standards that require utility companies to increase renewable energy supplies as part of their electricity capacity, have dramatically increased the renewable energy right-of-way processing workload for the BLM. The current Interior's Renewable Energy Priority Performance Goal is to increase, by September 30, 2015, approved capacity authorized for renewable (solar, wind, and geothermal) energy resources affecting Department of the Interior managed lands, while ensuring full environmental review, by at least 16,500 megawatts. Though the specifics of any priority goals beyond fiscal year 2015 will be developed as part of the 2017 budget process, the BLM will continue processing renewable energy applications in 2016 to stay on a path toward meeting the President's goal of permitting 20,000 MW of renewable energy capacity by 2020.

The Department will successfully meet these goals if a majority of the energy projects that were designated as priority projects for 2014 are approved. The primary factors that will influence renewable energy growth going forward are continued infrastructure investment and technology

improvements, both in the method and efficiencies of generation of renewable energy and in transmission of that energy from source to end-use.

### **Project Status**

For Fiscal Years 2014 and 2015, the BLM identified priority projects representing about 4,900 megawatts. Since this list was developed the priority projects have continued to evolve and currently represents about 3,430 megawatts. Of these projects, five were approved in 2014 representing about 1,250 megawatts, others have been postponed into a later years, some have been withdrawn by the applicant and one project application was denied. The BLM maintains this priority list in collaboration with the Bureau of Indian Affairs, the U.S. Fish and Wildlife Service, the National Park Service and the Department of Defense, with an emphasis on early consultation.

Three projects targeted for completion in 2015 are located within the Dry Lake Solar Energy Zone (SEZ). In this area the BLM held a combined sealed- and oral-bid auction on June 30, 2014, to submit right-of-way applications and plans of development for utility-scale solar energy projects on six parcels across 3,083 acres of public lands in Clark County, Nevada. The auction generated \$5,835,000 in high bids.

The BIA has published Notices of Intent to initiate the EIS process for two solar energy connected-action projects in Nevada. These projects include the First Solar 100-MW Paiute Snow Mountain Solar project (adjacent to Red Rock Canyon National Conservation Area) and the First Solar 100-MW Moapa Aiya Solar project. Both projects would potentially involve BLM connected-actions for transmission authorizations on public land. Connected actions are projects located on tribal lands or private lands and require BLM approvals for off-site facilities, such as transmission lines and road access, on adjacent public lands.

## **2016 Program Performance**

In 2016, the BLM will continue to implement the strategy to:

- Emphasize development of smart renewable energy development on public lands;
- Support Interior's Renewable Energy Priority Performance Goal; and
- Implement actions to identify additional leasing and development opportunities for solar energy projects in designated solar energy zones. Making these lands available for leasing proposals will provide for the best siting locations for environmentally sound solar energy development projects. The BLM will finalize a rulemaking process to establish rules to guide this leasing program to include a nomination and request for proposal process, with the expectation that this will ultimately lead to a competitive leasing program to accelerate the process of offering public lands for solar energy development.

# Realty and Ownership Management

## Activity: Realty and Ownership Management

		2014 Actual	2015 Enacted	2016 President's Budget			Requested Amount	Change from 2015
				Fixed Costs	Transfers	Program Changes		
Alaska Conveyance	\$000	22,000	22,000	+220	+0	+0	22,220	+220
	FTE	111	111		+0	+0	111	+0
Cadastral, Lands & Realty Mgmt	\$000	[45,658]	45,658	+652	-58	+5,000	51,252	+5,594
	FTE	[358]	358		+0	+0	358	+0
Cadastral Survey	\$000	11,276	+0	+0	+0	+0	0	+0
	FTE	87	+0		+0	+0	0	+0
Land & Realty Management	\$000	34,382	+0	+0	+0	+0	0	+0
	FTE	271	0		+0	+0	0	+0
Total, Realty & Ownership Management	\$000	67,658	67,658	+872	-58	+5,000	73,472	+5,814
	FTE	469	469		+0	+0	469	+0

The 2016 budget request for the Realty and Ownership Management activity is \$73,472,000 and 469 FTE. The total reflects a program change of +\$5,000,000 and 0 FTE and an internal transfer of -\$58,000 and 0 FTE from the 2015 enacted level.

### Activity Description

The Realty and Ownership Management activity has two programs that are focused on the use of lands and transfer of BLM-managed lands.

- The Alaska Conveyance Program transfers land title from the Federal Government to individual Alaska Natives, Alaska Native Corporations, and the State of Alaska pursuant to the 1906 Native Allotment Act, the Alaska Native Veterans Allotment Act of 1998, the Alaska Native Claims Settlement Act of 1971 (ANCSA) and the Alaska Statehood Act of 1959 (Statehood Act). Conveyance work has been ongoing since the 1960s. In 2004, the Alaska Land Transfer Acceleration Act (Acceleration Act) resolved conflicts between these laws and established deadlines for Alaska Native corporations and the State of Alaska to file final selection priorities.
- The Cadastral, Lands, and Realty Program provides cadastral survey services that are an important component to managing both Federal and private lands and manages authorized uses of the land for rights-of-way for pipelines, transmission lines for electricity and renewable energy, and other uses. This program also authorizes uses of the public lands for commercial filming and other purposes, and implements changes to land ownership by exchanging and purchasing lands, and by selling lands no longer needed for Federal purposes.

## Activity: Realty and Ownership Management

### Subactivity: Alaska Conveyance and Lands

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Alaska Conveyance	\$000	22,000	22,000	+220	+0	+0	22,220	+220
	FTE	111	111		+0	+0	111	+0

#### Justification of 2016 Program Changes

The 2016 budget request for the Alaska Conveyance and Lands Management activity is \$22,220,000 and 111 FTE.

#### Program Overview

The Alaska Conveyance and Lands Program transfers land title from the Federal government to individual Alaska Natives, Alaska Native Corporations, and the State of Alaska pursuant to the *1906 Native Allotment Act*, the *Alaska Native Veterans Allotment Act of 1998*, the *Alaska Native Claims Settlement Act of 1971* (ANCSA) and the *Alaska Statehood Act of 1959* (Statehood Act). Conveyance work has been ongoing since the 1960s. In 2004, the *Alaska Land Transfer Acceleration Act* (Acceleration Act) resolved conflicts between these laws and established deadlines for Alaska Native corporations and the State of Alaska to file final selection priorities.

The Alaska Conveyance and Lands Program performs adjudication, cadastral survey, easement identification, land examination, land record review to complete the land patent process, and Standards for Boundary Evidence assessments for Federal land, Indian land, and Native Corporation land managers. These processes are detailed below.

**Adjudication:** Adjudication is used to determine the legal sufficiency of a land title application for the purpose of passing right, title and interest of the Federal government of public lands. The BLM provides extensive outreach to Native corporations, including face-to-face meetings with corporate boards in local communities and to the State of Alaska to obtain final conveyance priorities.

**Cadastral Survey:** The cadastral survey component of the Alaska Conveyance and Lands Program provides the cadastral services necessary to issue patent. These services include preparing supplemental plats from existing survey plats and other information when possible; making administrative title navigability determinations to facilitate conveyance; making administrative determinations of emerged island title claims; issuing recordable 'Disclaimers of Interest of Title' for the beds of navigable rivers and other waterways; performing responsibilities as trustee for Alaska Native townsites created under the *Alaska Native Townsite Act*; providing assistance in determining maps of boundaries and performs surveys for Village corporation reconveyances required under Section 14(c) of the ANCSA; collects Public Land Survey System data to distribute through the web-based Spatial Data Management System (SDMS); issuing 'Standards for Boundary Evidence Certificates' prior to transactions and projects to

assist the authorized officer assess the risk caused by errors and misrepresentations in the public record and by antiquated surveys, and maintaining up-to-date digital copies of all survey records to distribute through the SDMS.

**Easement Identification:** Easement identification must be completed pursuant to Section 17(b) of the ANCSA for Native corporation selections that have not been transferred. This process involves participation by the public, the State of Alaska and the corporations themselves.

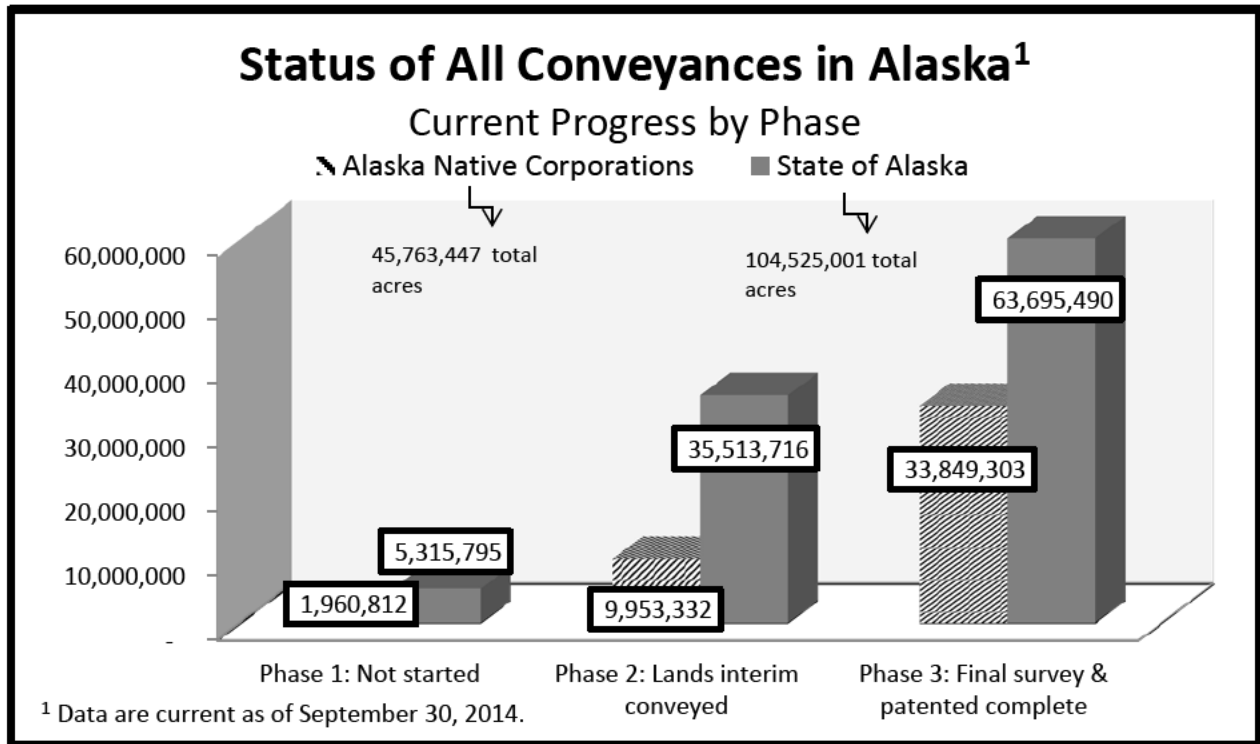

**Land Examination:** On the ground land examinations are conducted to resolve conflicts between Native allotment claims and to settle use and occupancy matters, including trespass and the presence of hazardous materials.

**Land Record Review:** In 2004, the Acceleration Act established deadlines for ANCSA corporations and the State to file priorities. Throughout Alaska, millions of the same acres were applied for by village corporations, regional corporations and the State. As part of the conveyance process, the BLM reviews selections to identify conflicts and ensure correct depiction in land records.

Provisions in ANCSA and the Statehood Act allow transfers of equitable title to unsurveyed lands through 'Interim Conveyance' for Native corporation selections and 'Tentative Approval' for State selections. Both types transfer right, title and interest of the Federal government but final patents (legal title) cannot be issued until cadastral survey of the final boundaries has been completed. Land patents are required by Federal law for completion of transfers and are required for almost all types of State and private development, financing, leasing, and disposing of property. Patent issuance is dependent upon survey plats and the patenting process follows approximately 18 months after field survey operations have been completed (i.e. field survey work completed in FY 2016 may have final title issued in early FY 2018).

A new and innovative process begun in 2014 will fulfill the BLM's commitment to the State of Alaska years ahead of previously projected schedules, at reduced costs. This approach fully complies with the Statehood Act, is fiscally responsible, and maximizes use of modern technology. With this method, there are fewer days in the field, less exposure to risks and hazards encountered in the field including encounters with bears and performing helicopter landings on unimproved landing areas. The new survey products will allow the State and their stakeholders to locate final patent corners on-the-ground by usage of the Global Navigation Satellite System, with Online Positioning User Service on the National Spatial Reference System.

By the end of 2014, the BLM surveyed and patented 97.5 million acres or 65 percent of the original 150 million acres (Phase 2, below). Approximately 46 million acres, or 31 percent, are under some form of 'Tentative Conveyance' but have not been surveyed (Phase 1, below). Additionally, about seven million acres or five percent, of the lands need to be both surveyed and conveyed. The chart below displays the status of all conveyances, as of the end of 2014.

In 2015, the BLM plans to complete 1,000 miles of new field survey (Phase 1, above) and approve 3,300 miles of prior cadastral field survey (Phase 2, above.). The BLM will also process 20 Native allotment claim applications. Approximately 400,000 acres of Native corporation entitlements and one million acres of the State of Alaska entitlement will be patented.

The current phase of Native Corporation and State adjudication requires meetings to resolve conflicts between corporation and State selections so field survey instructions can be written with detail sufficient for future patenting. In addition, meetings between the corporations and the State will be coordinated by BLM personnel to resolve easement conflicts so the easements on unsurveyed land can be matched with easements on land that has already been patented.

The Acceleration Act provides authority to round up acreages, settle final selection entitlement matters, and determine land selections where lands had been withdrawn, segregated or relinquished. Since 2003, the BLM has conducted face-to-face meetings with Alaska Natives in hundreds of remote locations to obtain or clarify evidence on Native allotment claims, and with Native corporation representatives to discuss selection and title matters. Because it is not appropriate to use 'Interim Conveyance' and 'Tentative Approval' where unresolved issues remain, title conveyances are increasingly dependent upon field survey and survey plats for issuance of patents.

### 2016 Program Performance

In 2016, the BLM will approve 1,000 miles of prior cadastral field survey and complete 700 miles of new field survey. The BLM will also process 20 Native allotment claim applications, and

patent acreage surveyed and platted in previous years. Approximately 600,000 acres of Native corporation entitlements and 800,000 acres of the State of Alaska entitlement will be patented. Transfer of title through 'Interim Conveyance' or 'Tentative Approval' will continue to be completed, as necessary, for Native corporations and the State of Alaska.

A combined total of 19,178 parcel applications were filed under the *1906 Native Allotment Act* and the *Alaska Native Veteran Allotment Act of 1998*. Over 18,845 of these claims have been closed through patent or rejection, leaving 308 applications pending. Although the *1906 Native Allotment Act* was repealed by ANCSA, claims pending with the Department up to the time of repeal still must be addressed by the BLM.

A total of 45.8 million acres of Native corporation entitlements have been identified; survey has been completed and patents have been issued for 33.8 million acres (74 percent), leaving 11.9 million acres (26 percent) that still require survey and patent. The State of Alaska entitlement is 104.5 million acres; survey has been completed and patents have been issued for 63.7 million acres (61 percent), leaving 40.8 million acres (39 percent) that still require survey and patent. The majority of the land not surveyed and patented is under either interim conveyance or tentative approval.

	FTE	3	4	4	+0

#### Notes:

- Public Survey amounts are shown as new budget authority derived from non-federal sources (advances made by private individuals to pay the costs incidental to land surveys requested by them); 43 U.S.C. 759 provides for accomplishment of public surveys of whole townships through a trust fund and deposits for expenses deemed appropriated, 43 U.S.C. 761 provides for refunds from trust funds established in 43 U.S.C. 759 of costs in excess of expenses, and 31 U.S.C. 1321(a) classifies the activities of "expenses, public survey work, general" and "expenses, public survey work, Alaska" as trust funds; These funds are appropriated on a permanent basis. More information on Public Survey is found in the Miscellaneous Trust Funds chapter.

- 2015 and 2016 Reimbursable Cadastral Survey amounts are shown as estimated transfers from the U.S. Forest Service, the Bureau of Indian Affairs, and other Agencies (including the U.S. Fish and Wildlife Service and the National Park Service)

- Rights of Way Processing amounts are shown as new budget authority derived from fees charged to recover certain costs of processing rights-of-ways (ROW); the Federal Land Policy Management Act of 1976, as amended (43 USC 1735) and the Mineral Leasing Act of 1920, as amended by the Trans-Alaska Pipeline Act of 1973, Section 101 (30 USC 185) appropriates these funds on a current basis. More information on Rights of Way Processing is found in the Service Charges, Deposits, & Forfeitures chapter

*- Cost-Recovery Realty Cases amounts are shown as new budget authority derived from fees from applicants to cover administrative costs for the conveyance of Federally-owned mineral interests, recordable disclaimers of interest, and leases, permits, and easements; Federal Land Policy Management Act of 1976, as amended (43 USC 1735) appropriates these funds on a current basis. More information on Cost-Recovery Realty Cases is found in the Service Charges, Deposits, & Forfeitures chapter.*

*- Amount in 2014 and 2015 for Public Survey shown net of sequestration*

*- Actual and estimated obligations, by year for Cost-Recovery Realty Cases are found in President's Budget Appendix under the BLM section*

## Justification of 2016 Program Changes

The 2016 budget request for the Cadastral, Lands, and Realty Management Program is \$51,252,000 and 358 FTE, a program change of +\$5,000,000 and 0 FTE and an internal transfer of -\$58,000 and 0 FTE from the 2015 enacted level.

**Transmission Corridors (+\$5,000,000/0 FTE)** – Aging electrical infrastructure in the West requires substantial upgrades to improve reliability and increase capacity. The upgrades will also facilitate renewable energy development in the West, including on BLM-administered public lands. The BLM is poised to meet these energy needs through designations of energy corridors in low conflict areas and siting high voltage transmission lines, substations and related infrastructure in an environmentally sensitive manner.

The requested funding would position the BLM to strategically plan for the long term increased demand and updates to the electric grid throughout the West with an improved and updated assessment process for the development and siting of energy corridors and rights-of-way (ROWs). Strategic planning would take into consideration renewable energy development including wind, solar, geothermal and hydropower. Planning activities would include revising land use plans in coordination with Federal, State, local and tribal stakeholders; revising energy corridors; developing landscape-level mitigation and best management practices; and synchronizing BLM and U.S. Forest Service (USFS) land use/management plans with transmission planning conducted by the Western Electricity Coordinating Council. These strategic planning activities are among the goals and objectives the BLM identified in its “Smart from the Start” vision for responding to the increased demand for transmission corridors.

**Transfer to National Conservation Lands (-\$58,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$58,000 will be transferred from Cadastral, Lands & Realty Management. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

## Program Overview

### Transmission

Facilitating efficient, responsible energy development and transmission facilities is a critical component of the BLM multiple use and sustained yield mission as stated in the Federal Land Policy and Management Act. As the largest Federal land manager in the West, the BLM plays a

leadership role in planning for conventional and renewable energy development and corridors as well as siting transmission facilities. The BLM must strengthen its environmental review and permitting procedures as well as improve the designation of existing and future energy corridors in land use plans. The BLM anticipates that the industry will continue to pursue new multi-jurisdictional projects across the West for distributed generation and transmission line upgrades and expansions, among other uses.

To address these demands, and to strengthen the environmental review and permitting process, in accordance with Secretarial Order Number 3330 entitled "Improving Mitigation Policies and Practices of the Department of the Interior," issued by Secretary of the Interior Sally Jewell in October 2013, the BLM will employ a "smart from the start" approach over the next decade. This approach will identify areas of conflict and opportunity during early planning and follow up by selecting the most appropriate areas for siting transmission facilities. The BLM will establish high standards for collaboration with industry, States and local governments, Tribes, Federal agencies and other stakeholders and build strong functional partnerships among all entities engaged in permitting these transmission lines and pipelines. Better planning and permitting to maximize the use of corridors will help reduce the proliferation of separate ROW across the landscape and will be key to protecting resources and minimizing environmental impacts. The BLM will look for innovation, research and technology to assist in meeting these goals. Continuing to develop and maintain an expert workforce of project managers, resource specialists, and managers with knowledge of electric transmission planning and operations, permitting construction, reclamation and mitigation techniques will be key to success of this effort.

Over the past several years, the BLM has made great strides in a variety of areas related to transmission permitting and energy corridors. Since 2010, the BLM has authorized over six major pipeline projects for oil, water, and natural gas totaling 1,200 miles with nearly 600 miles on BLM lands in Utah, Colorado, Nevada, North Dakota, Montana, and Wyoming. The estimated socioeconomic impact of the six projects entails over \$5.4 billion of industry investment and approximately 4,500 construction jobs.

Since 2011, the BLM has participated as a member of the Rapid Response Team for Transmission with the goal of improving coordination, expediting permitting and identifying lessons learned on seven priority pilot projects identified by the President. The BLM is lead or co-lead agency on four of the pilot projects. The President's Executive Order No. 13604 on infrastructure further increased the emphasis on interagency collaboration in the siting and permitting of high voltage transmission projects. The BLM is actively coordinating with the U.S. Department of Energy and USFS to review existing corridors designated pursuant to Section 368 of the Energy Policy Act of 2005. The BLM and USFS have designated priority regions in the western U.S. to focus on reviews to determine needed corridor revisions, additions and deletions. The BLM is also working with stakeholders to review and update interagency operating procedures that are required when siting projects within energy corridors designated pursuant to Section 368 of the Energy Policy Act of 2005. The BLM is finalizing two policies for major transmission lines. The first will provide guidance for a preapplication process and the second provides guidance for the NEPA process.

In June 2013, the BLM deployed an eight person National Transmission Support Team dedicated full-time to high voltage transmission and related infrastructure projects. The BLM is also working to update core training courses with an increased emphasis on distance learning options. The BLM has taken steps to align and coordinate the activities of staff working on

transmission line project with staff in our Renewable Energy Coordination Offices through joint meetings, calls and training efforts.

### **Rights-of-Way**

The BLM grants land use authorizations for a wide variety of commercial and noncommercial purposes as allowed by law. Many companies, non-profit organizations, and State and local governments apply to the BLM each year to obtain ROW grants to use the public lands for roads, pipelines, transmission lines and communication sites. Energy-related ROWs play an essential part in the transportation of energy sources. Cadastral surveys and other boundary services are provided to facilitate these actions and help reduce boundary disputes, trespass and litigation.

### **Cadastral & Lands**

Through the Cadastral Survey Program, the BLM conducts the official Federal Authority Surveys that are the foundation for all land title records in large sectors of the United States and provides Federal and tribal land managers, and their adjoining non-Federal landowners, with information necessary for land management. Several statutes and delegations vest authority in the BLM to provide cadastral services for itself and the other Federal land management agencies, including the National Park Service, the U.S. Fish and Wildlife Service, the Bureau of Reclamation, the USFS, and other Federal and tribal entities.

Conducting Federal Authority Surveys requires the determination of boundaries, the marking of corner positions with brass cap markers, posting and marking the boundary lines, and the filing of associated approved records in the Official United States Records System. Additional support services provided by the Cadastral Survey Program include accurately positioning legal descriptions for timber sales, rights-of way, protection of special areas, oil and gas leases, and mineral leases; providing standards for boundary evidence assessments and management of land boundary plans to reduce risks including unauthorized use; providing cadastral services and Geographic Coordinate Data Base services to support development of renewable energy projects; and updating and modernizing riparian boundaries where resources and land values are at a premium.

Companies, non-profit organizations, and State and local governments use the land records to apply to obtain ROW grants to use the public lands. The BLM uses these records to process ROWs for roads, pipelines, transmission lines and communication sites. ROWs based on accurate land records play an essential role in the cost-effective development and transportation of energy sources by providing the certainty necessary for infrastructure building. Similarly, accurate land and survey records are essential for the development and construction communication sites that provide equipment necessary for the transmission of television broadcasts and the cellular phone network, which among other important benefits, enhance emergency services and decrease impacts to human health and safety on sensitive public lands.

The BLM also prepares the documents required to conduct land sales, exchanges and withdrawals to ensure efficient and effective management of the public lands. Each record is stored and tracked for every authorization, review, and land withdrawal to ensure the most appropriate uses. The BLM works closely with the Department of Defense (DOD) to coordinate

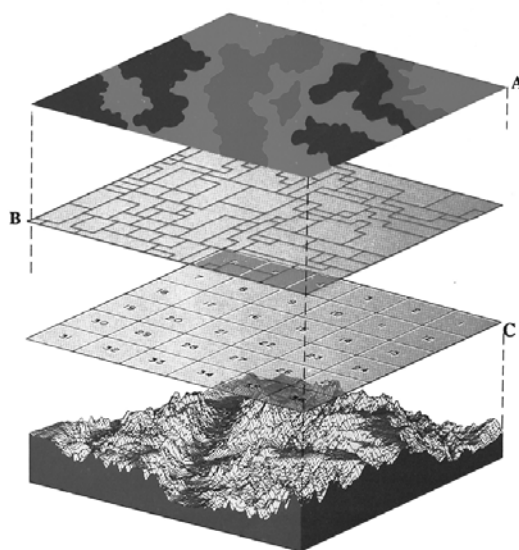

the documentation of withdrawals for military purposes and coordinate records management of adjacent military and public lands. The BLM also manages the documents of grants of lands to State, local governments and non-profit organizations for recreation and public purposes.

The BLM generates the Public Land Survey System (PLSS) Data to represent land ownership boundaries in a coordinated, standardized digital fashion. GIS layers depend on PLSS Data as the base layer for many BLM processes including surface management agency, withdrawals, leasing, rights-of-way, sales, exchanges and stipulations.

In addition, the BLM is the custodial agency for land tenure records that date back to the 1800s. The BLM currently manages over nine million title documents as well as cadastral survey records from across the Nation. The General Land Office Automated Records System (GLO Records) is responsible for making land tenure records available on the Internet via the GLO Records website (<http://www.glorerecords.blm.gov>).

The image below illustrates the complexities of the BLM's Land Information System.

### BLM's Land Information System

- A Resource Data
- B National Public Land and Mineral Records
- C Public Land Survey System

Cadastral Survey provides accurate location of the Public Land Survey System which in turn supports the BLM multiple use mandate while protecting the BLM's land and resources from unauthorized use.

## Realty Management

The BLM manages the grant documents system for ROW and other use authorizations for public lands. ROWs are granted for many purposes, including electricity transmission, roads, and water pipelines. The program also prepares land tenure documents for realty activities including land sales, land exchanges, and withdrawals.

ROW assists in providing for basic access, power, and communication infrastructure needs of cities, towns, and rural communities. The BLM manages these governing ROW and land tenure documents including the tracking of new and amended ROW authorizations.

Land sales, exchanges and withdrawals are also conducted to ensure efficient and effective management of the public lands. Land exchanges and withdrawals are useful land management tools to meet the multiple use mission of the BLM. The BLM authorizes, reviews, and revokes land withdrawals to ensure the most appropriate uses and works closely with the DOD to coordinate withdrawals for military purposes, resolve issues with over-flights, and coordinate management of adjacent military and public lands. The BLM also administers grants of lands to State, local governments and non-profit organizations for recreation and public purposes at reduced cost using its authority under the Recreation and Public Purposes Act.

## Other Funding Sources

- Benefitting Programs & Agencies: Approximately 45 percent of all work completed by the Cadastral Survey Program is funded by other benefitting BLM subactivities and other benefitting agencies.
- The Federal Land Transaction Facilitation Act (FLTFA) is proposed for reauthorization in 2016 to allow lands identified as suitable for disposal in recent land use plans to be sold using the FLTFA authority. FLTFA sales revenues would continue to be used to fund the acquisition of environmentally sensitive lands and the administrative costs associated with conducting sales. FLTFA was first enacted in July 2000. It provided for the use of a percentage of revenues from the sale or exchange of public lands identified for disposal under land use plans in effect as of the date of enactment to acquire inholdings within certain federally designated areas, or lands adjacent to those areas, which contain exceptional resources, and to administer the lands sale program. Of the funds used for acquisition, 80 percent were to have been expended in the same State in which the funds were generated, but 20 percent could have been expended for acquisition in any of the 11 other western states. Up to 20 percent of revenues from disposals may have been used for administration costs and other expenses. FLTFA expired in July 2010, but was subsequently reauthorized for one year, expiring in July 2011. The 2016 budget proposes to reauthorize FLTFA and allow lands identified as suitable for disposal in recent land use plans to be sold using the FLTFA authority. The FLTFA sales revenues would continue to fund the acquisition of environmentally sensitive lands and to cover the administrative costs associated with conducting sales.
- The Southern Nevada Public Land Management Act of 1998 (SNPLMA) became law in October 1998. It allows the BLM to sell public lands within a specific boundary around Las Vegas, NV. The revenue derived from these land sales is split between the State of Nevada General Education Fund (five percent), the Southern Nevada Water Authority (10 percent), and a special account (85 percent) available to the Secretaries of the

Interior and Agriculture for use throughout Nevada for parks, trails and natural areas; capital improvements; conservation initiatives; multi-species habitat conservation plans; environmentally sensitive land acquisition; and Lake Tahoe restoration projects. Other provisions in SNPLMA direct certain land sale and acquisition procedures and provide for the sale of land for affordable housing.

- Cost Recovery: The BLM recovers costs for processing applications and monitoring ROW grants on public lands. Although the BLM is authorized to collect cost recovery in certain circumstances, some customers, such as State and local governments are not subject to cost recovery. Cost recovery for cadastral services is also collected as appropriate.

Please see the Permanent Operation Funds Chapter for more information on FLTFA, SMPLMA, and other land sales accounts. For more information on cost recovery efforts, please see the Service Charges, Deposits, and Forfeitures Chapter.

### **Critical Factors**

Urban growth near BLM lands is creating costly management problems, such as encroachment, trespass, and unauthorized recreational activities on public lands. Proactive utilization of cadastral surveys along to the urban interface provides boundary location to alleviate this emerging issue and reduce the number of lawsuits and recover revenues associated with lost resources and uncollected rents.

The demand for cadastral services to support energy development activities is increasing. Review of survey plats is a necessary step in processing Applications for Permits to Drill. Program staff review the plats to ensure that the construction of access roads, well pads, and well bottom drilling targets do not infringe on other property or mineral rights. Chain of survey and legal description reviews also help to determine whether land ownership and boundary locations are legally defensible prior to development. There is greater demand for GCDB data to provide accurate digital graphic portrayal of the Public Land Survey System. The energy programs use this digital version of PLSS data to display all stipulations and current leases in an automated format. This facilitates more efficient energy development and enables public land managers to make more informed decisions.

With the President and the Secretary's goals to increase renewable energy development on the public lands and with many States enacting renewable energy portfolio standards that require utility companies to increase renewable energy supplies as part of their electricity capacity, renewable energy right-of-way processing workload for the BLM has increased dramatically. Much of this work is customer and market driven which makes it difficult to predict the number of applications that will be filed for the various authorizations with a high level of certainty.

### **2016 Program Performance**

The BLM plans to leverage technology in land tenure management to become more efficient in land use decisions and resource planning. BLM's land record system was developed in the 1980s and last was updated to account for the year 2000 issues. Beginning in 2015, the BLM will seek solutions to modernize and consolidate these existing systems. The goal is to develop a comprehensive system to collect, maintain and publish the official Federal land status records, including accurate and consistent land acreage and other statistical data used by the public and

Federal land management agencies. Improvements would include using authenticated data sources, consolidating data, and using spatial and survey data. The system will link this data to all relevant land records and information on land title, use, restrictions and resources. The system will support legal, policy and regulatory requirements and efficiently deliver key business products (Public Land Statistics, Master Title Plats, Historical Indices, Reports, geospatial maps and orthophotographs, etc.).

Also, in 2015 and 2016, the bureau will implement a new geospatial publication web service to replace its outdated internal and external sites. The web service will provide search, retrieve, display and delivery functionality for authenticated BLM mineral, land status and resource data.

In 2016, the BLM will also continue to perform the core functions of directing and approving surveys, addressing public inquires on Federal land status, consulting with staff members from other programs to advise on boundary, title, and geospatial issues, providing direction and control for field surveys paid for by other entities, and managing the geographic coordinates of PLSS data.

In addition, the BLM will implement the last of nine recommendations from an Office of the Inspector General (OIG) audit report on management of land boundaries. This report states, "proper survey and management of high-risk lands with antiquated surveys has the potential to generate hundreds of millions of dollars in revenue from lands with valuable surface and subsurface resources." In response, the BLM will continue issuing guidance to BLM State Offices through Instruction Memoranda directing them to identify lands with revenues lost or at risk due to antiquated boundary evidence and propose a plan for resolution.

In addition, in response to the OIG report, the BLM has developed and implemented new policies to ensure that cadastral surveyors review the adequacy of boundary evidence prior to the approval of significant land transactions and commercial projects. These policies will ensure the proper collection of rents and protection of public lands and resources from unauthorized uses.

In 2016, the BLM will also continue to focus on responsible energy development and associated transmission lines. Specifically the BLM will have a continued emphasis on completing timely environmental reviews and permitting for the four transmission Pilot Projects identified as a priority by the President in October 2011. Similarly, the BLM will focus resources on environmental reviews and permitting of transmission lines that serve BLM's 2016 Priority Renewable Energy Projects. Collectively, these priority transmission projects will replace aging infrastructure, enhance grid reliability, and facilitate renewable energy development while serving the needs of communities across the western U.S.

The BLM will continue to conduct public land sales, revoke public withdrawals, and facilitate military base closures. The bureau will also review public land withdrawals and anticipates revoking withdrawals for 64,000 acres

# Communications Site Management

## Activity: Communication Site Management

### Subactivity: Communication Site Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Communication Site Management	\$000	2,000	2,000	+0	+0	+0	2,000	+0
	Offset	-2,000	-2,000	+0	+0	+0	(2,000)	+0
	FTE	15	15		+0	+0	15	+0

#### Justification of 2016 Program Changes

The 2016 budget request for the Communication Site Management Program is \$2,000,000 and 15 FTE.

#### Program Overview

The Communication Site Management Program processes applications for communications sites from commercial, private and governmental entities under Title V of the *Federal Land Policy and Management Act of 1976* and issues right-of-way authorizations. The program considers requests for new sites, inspects and administers existing sites and authorizations, completes site management plans, and collects rental fees.

The BLM grants and administers authorizations for communications sites, while working to protect the natural resources associated with both public and adjacent land owners. The BLM works to prevent unnecessary or undue degradation to public lands by promoting collocation on the communication site rights-of-way considering engineering and technological compatibility, national security and land use plans. The BLM also coordinates to the fullest extent possible, all actions under the program with State and local governments, interested individuals, and appropriate quasi-public entities.

#### ***Demands and Trends***

Prior to 1996, each user was required to have a separate authorization, even when users shared a site. In response to the *Telecommunications Act of 1996*, the BLM implemented new regulations and policies that greatly simplified and streamlined the authorization and administration of these sites. The BLM now requires only the owners of the towers or facilities to have a right-of-way authorization, while other users of the sites can collocate in these facilities, as tenants or customers, without further BLM approval.

In 1996, there were 3,313 authorized communications facilities on BLM-administered land. The BLM currently has over 3,800 sites authorized for separate communication use rights-of-way located on approximately 1,500 mountain tops. In 2014, the BLM hired and trained a second project manager and performed 28 communication site audits which encompassed 138 facilities. The BLM identified \$65,500 of unreported rent, 16 unauthorized trespass facilities, and finalized approximately 15 communication site management plans. The BLM has

increased the collection of rental fees from \$2.0 million in 1996, to \$8.16 million in 2014 and an estimated \$9.0 million in 2015.

A significant challenge facing the BLM is ensuring that holders of communication site rights-of-way authorizations report accurate inventories of communications uses within their facilities to allow the Bureau to assess and collect the appropriate rent. Based on recent compliance inspections by program administrators, it is estimated that for every dollar of rent collected, at least one dollar is not collected. In order to better manage the development and use of communications sites and to mitigate the impacts on surrounding public lands, the BLM develops communication site management plans, which guide users and analyze the impacts of the structures on the sites and the surrounding lands. These plans allow the BLM to better manage sites and often result in the collection of additional rent revenues. The BLM's goal is to develop site management plans for all facilities with communication sites located on the public lands it manages.

In recent years, the BLM has focused on strengthening partnerships and improving its suite of BLM, interagency and industry sponsored right-of-way management courses, including the Communication Site Management Course, the National Lands Training for Line Officers, the Beginning Lands and Realty Training, and two industry meetings scheduled in Nevada.

### **2016 Program Performance**

In 2016, the BLM will continue to toward the goals of Executive Order 13616 on Accelerating Broadband on Federal Property, including developing processes to reduce the time needed for issuing communication use rights-of-way authorizations. Additionally, the BLM will continue to process applications for communications site rights-of-way, as well as applications for assignments, amendments, and renewals. The Bureau will also continue to emphasize site administration and management. The BLM expects to complete 30 to 40 final communication site management plans, process 170 actions for lease or grant issuances, rejections, amendments, and renewals; process 50 actions for assignments, cancellations, relinquishments, and other administrative work; and complete 15 actions for trespass. The BLM will evaluate the possibility of expanding the centralized billing effort to other types of right-of-way rentals. The BLM will train over 60 agency and industry personnel on the siting and administration of communication uses on public land, plus train 75 line managers on their roles and responsibilities in the Communication Site Management Program.

In addition, the BLM will review the current communications use rental schedule as recommended by the Office of Inspector General in Report in its review of the Rights-of-Way program. In 2015, the BLM plans to publish an advanced Notice of Proposed Rulemaking in the Federal Register to determine if the rental schedule should be updated; the results of that review will determine the work to be performed in 2016.

# Resource Protection and Maintenance

## Activity: Resource Protection and Maintenance

		2014 Actual	2015 Enacted	2016 President's Budget			Change from 2015	
				Fixed Costs	Transfers	Program Changes		Requested Amount
Resource Mgmt Planning, Assessment & Monitoring	\$000	37,125	38,125	+416	+0	+20,800	59,341	+21,216
	FTE	214	214		+0	+3	217	+3
Law Enforcement	\$000	25,325	25,325	+270	-100	+0	25,495	+170
	FTE	131	131		+0	+0	131	+0
Abandoned Mine Lands	\$000	16,687	16,987	+159	+0	+2,800	19,946	+2,959
	FTE	63	63		+0	+0	63	+0
Hazardous Materials Management	\$000	15,612	15,612	+204	-30	+0	15,786	+174
	FTE	94	94		+0	+0	94	+0
Total, Resource Protection & Maintenance	\$000	94,749	96,049	+1,049	-130	+23,600	120,568	+24,519
	FTE	502	502		+0	+3	505	+3

The 2016 budget request for the Resource Protection and Maintenance activity is \$120,568,000 and 505 FTE. It reflects program changes totaling +\$23,600,000 and +3 FTE and internal transfers totaling -\$130,000 and 0 FTE from the 2015 Enacted level.

### Activity Description

The functions within the Resource Protection and Maintenance activity contribute to the protection and safety of public land users and environmentally sensitive resources.

- Resource Management Planning – The land use planning function is based on collaboration with local communities and State and tribal governments, as well as on science-based analysis.
- Resource Protection and Law Enforcement – The Resource Protection and Law Enforcement subactivity provides for the protection from criminal and other unlawful activities on public lands.
- Abandoned Mine Lands – The remediation of abandoned mine lands supports core programs by restoring degraded water quality, cleaning up mine waste that has been contaminated by acid mine drainage and heavy metals (such as zinc, lead, arsenic, mercury and cadmium), remediating other environmental impacts on or affecting public lands, and mitigating physical safety issues.
- Hazardous Materials Management – The Hazardous Materials Management Program provides for the prevention, mitigation, and remediation of the effects of hazardous material releases and other dangers on the public lands.

The Resource Protection and Maintenance activity funds land use planning and compliance processes, which are required by the *National Environmental Policy Act (NEPA)* and the *Federal Land Policy and Management Act (FLPMA)*.

**Activity: Resource Protection and Maintenance**  
**Subactivity: Resource Management Planning, Assessment & Monitoring**

		2014 Actual	2015 Enacted	2016 President's Budget			Change from 2015	
				Fixed Costs	Transfers	Program Changes		Requested Amount
Resource Mgmt, Planning, Assessment & Monitoring	\$000	37,125	38,125	+416	+0	+20,800	59,341	+21,216
	FTE	214	214		+0	+3	217	+3

**Summary of 2016 Program Changes/Internal Transfers for Resource Management, Planning, Assessment & Monitoring:**

	(\$000)	FTE
Applied Science - Enterprise Geospatial System	+7,800	+0
Assessment, Inventory and Monitoring	+5,000	+3
Monitoring Greater Sage-Grouse Plans	+8,000	+0
<b>Total</b>	<b>+20,800</b>	<b>+3</b>

**Justification of 2016 Program Changes**

The 2016 budget request for Resource Management Planning, Assessment & Monitoring is \$59,341,000 and 217 FTE, a program change of +\$20,800,000 and +3 FTE from the 2015 enacted level.

**Enterprise Geospatial System (+7,800,000 /+0 FTE)** The budget request includes a \$7.8 million increase in Resource Management Planning to support the deployment of the Enterprise Geographic Information System (EGIS), critical to help the BLM make a generational leap forward in its geospatial capabilities. The EGIS will support the adoption and implementation of core indicators, standardization of data and collection methods, and the digitization of legacy data for inclusion in decision-making analyses. It will allow employees to seamlessly access and use data from every level of the organization and across units, both from their office as well as in the field using mobile devices. The EGIS is key in providing data management and analytical support to managing public lands across various priority landscape-scale initiatives, including the Assessment, Inventory and Monitoring Strategy, Greater Sage-Grouse Plan Implementation and Monitoring, Renewable and Conventional Energy Development, Rapid Eco-regional Assessments, Climate Change Adaptation, Planning 2.0 Initiative, Regional Mitigation, and other multiple scale resource management activities. The BLM will continue to work collaboratively with other federal partners to develop common data standards and manage geospatial datasets used for public land management decisions. The BLM geospatial proposal is integrated within Interior's growing enterprise GIS capabilities and serves as a critical component of the Department's corporate geospatial strategy. The Bureau's ability to provide vast quantities of quality data easily will have profound organizational, cultural, and social benefits. The EGIS will provide the capability to overlay internal and external resource datasets (e.g., vegetation, hydrology, and ecological sites) with data on natural and human-induced stressors (e.g., wildfire, invasive species, climate change, and development), yielding robust and complex analyses of resource use and effects across multiple scales. The EGIS will allow

the BLM to continue to develop and implement core data and technology standards to support large-scale, science-based decision-making, while at the same time delivering critical information to the public for its use and enjoyment of the public lands.

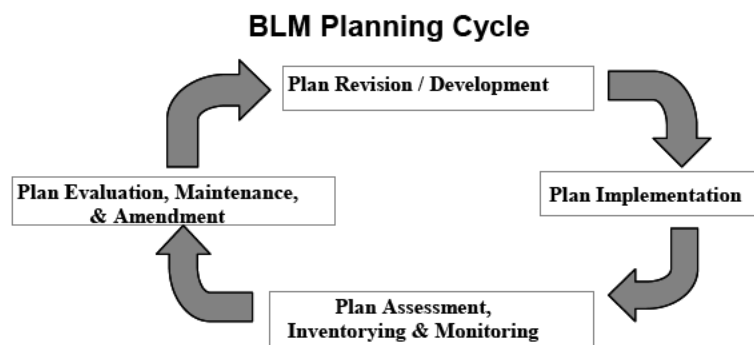

**Assessment, Inventory and Monitoring Strategy (AIM) (+\$5,000,000 /+3 FTE)** – Informed decision making and adaptive management require current data about the status and trend of terrestrial and aquatic systems and about the location and extent of natural and human-caused disturbances. The BLM's Assessment, Inventory, and Monitoring (AIM) Strategy is the framework for this data collection. The 2016 budget request includes an increase of \$5.0 million to facilitate implementation of the AIM strategy, which is central to meeting commitments outlined in the Implementation of the Western Solar Energy Plan, the Greater Sage-grouse land use plans, Secretary Jewell's landscape mitigation strategy and other initiatives.

**Monitoring in Support of Greater Sage Grouse Conservation Initiative (+\$8,000,000/+0 FTE)** – The 2016 budget request includes an increase of \$8,000,000 to develop assessment and monitoring protocols using core indicators, standardized field methods, remote sensing, and a statistically valid study design to provide nationally consistent and scientifically defensible information. These protocols will be used to meet the monitoring commitments made during the Greater Sage-Grouse Conservation effort. These commitments include gathering information on terrestrial and aquatic site condition, ecological sites, special status species, treatments, disturbance of the public lands, fire, and land uses.

### Program Overview

Resource Management Plans (RMPs) are the foundation of public land management. Planning and plan implementation decisions describe desired resource conditions on the ground and methods to achieve desired conditions across the more than 247 million acres of BLM-managed public lands. Through its plan assessment, inventory and monitoring efforts, the Bureau collects data, which is stored in geospatially enabled databases, to determine whether the BLM is meeting its goals for desired condition. Plan evaluations allow the BLM to determine which decisions need to be revised or amended for the BLM to continue effectively managing the public lands. The land use planning process encourages collaboration and partnerships, which help the BLM determine how to manage public lands and associated resources to balance the needs of adjacent communities with the needs of the Nation.

The Resource Management Planning, Assessment, and Monitoring Program uses interdisciplinary processes to complete the management and decision-making cycle shown and described further below.

Land Use Plan Revision and Development – Completion of ongoing RMP revisions and plan developments is the highest priority of the program. Planning areas without updated RMPs present numerous challenges to the BLM. Updated plans:

- Incorporate the best, most current science;
- Contain sustainable decisions that are less vulnerable to legal challenge;
- Are responsive to changes in climate and conditions on the ground;
- Include desired conditions that are relevant or desired by the public, other governmental entities, or industrial users; and
- Advance priorities such as energy development and transmission corridors and provide economic opportunities for the public

Delayed completion of planning efforts postpones critical resource management decisions and increases potential for litigation in planning areas. As RMP decisions are made, the program initiates new RMP revisions or amendments in areas where changing demands on public land resources have been identified.

Sustainable Planning through the National Environmental Policy Act (NEPA) – This dynamic approach to land use planning cycles through implementation, effectiveness monitoring, and assessment of emerging issues such as rapid population growth and changing resource conditions. The planning cycle allows plans to remain relevant and adaptive to changing conditions by addressing emerging challenges and changing resource issues as they arise, which ensures plan durability and reduces the frequency of costly revisions. The BLM uses the NEPA review and analysis process to inform its land use planning and project-level implementation decisions throughout the planning cycle. Through the NEPA process, the BLM assesses the potential environmental impacts of a proposed action through a range of alternatives, seeks input from stakeholders and the public, and collaborates with partners in Federal, State, local, and tribal government to inform its decisions.

Land Use Plan Amendments – Amendments enable the program to address significant new information, respond to changing land uses, consider proposals that deviate from the plan, and implement new policies that change land use plan decisions. Plan amendments are an economical means to support adaptive approaches to resource management and reduce the frequency of costly revisions, and they often support priority projects, such as those related to renewable energy and national energy infrastructure.

Monitoring for Adaptive Management: Informed decision making and adaptive management require current data about the status and trends of terrestrial and aquatic systems, about the location and extent of natural and human-caused disturbances, and about the location and effectiveness of land treatments. The BLM's AIM Strategy is the framework for this data collection. This strategy outlines a process for using core indicators, standardized field methods, remote sensing, and a statistically valid study design to provide nationally consistent and scientifically defensible information to determine the status of the public lands and track changes to natural resources on the public lands over time. This strategy supports the Solar Programmatic EIS, the Greater Sage-Grouse Conservation Initiative, as well as other landscape scale decisions

## Critical Factors

The BLM addresses a number of critical factors that drive land use planning and decision-making processes. These include the following:

Land Health Stressors – Land health stressors such as invasive plant and insect infestations, drought, and catastrophic wildfires contribute to the loss of native animal and plant communities and habitat for threatened and endangered species. Changing conditions necessitate the reevaluation of plans on a regular cycle. Eco-regional assessments and adaptation strategies for mitigating impacts of land health stressors indicate on a regional basis whether land use decisions remain valid or require amendment.

Energy Demands – Increased demands for renewable and conventional energy and associated infrastructure affect the balance with competing uses such as recreation use, off-highway vehicle use, and conserving a broad range of wildlife habitat for future generations.

Expanding Populations & Community Growth – These factors challenge wildland fire suppression efforts in the wildland-urban interface, contribute to increased conflicts between recreational uses, and increase demands for surface-disturbing uses such as roads, utility distribution lines, communication sites, sand, gravel, mineral materials sites, and public facilities. Understanding the complex socioeconomic issues in communities adjacent to BLM-administered lands is imperative to effective land management.

Protests/Appeals/Litigation – Public land management conflicts heighten BLM's attention to risk management in response to challenges over land use decisions. Litigation not directly associated with land use planning often affects land use planning decisions, given the broad scope of resource issues considered.

## Means and Strategies

The BLM uses a number of means and strategies to support land use planning and decision-making processes. The means and strategies highlighted below support not only land use planning, but also provide critical information, resources, and data infrastructure used Bureau-wide, and often outside the BLM by Federal, State, tribal and local partners. This information is necessary and valued by resource managers and specialists as they prepare project analyses for all types of activities. These efforts include the following:

ePlanning – The ePlanning web-based application streamlines land use planning and NEPA processes. It enhances transparency and creates efficiencies through faster and easier public access to NEPA documents for review and comment and simplified comment analysis and response. ePlanning is currently used for all new RMP revisions and NEPA in four States (Nevada, Alaska, Arizona and Idaho). In October, 2014, a comprehensive deployment strategy was initiated to implement ePlanning for NEPA activities across all BLM States by the end of 2015.

Geospatial Services – The Bureau is transitioning to a landscape approach to managing public lands. To support that approach, the Geospatial Services program is creating an environment where data is managed in an integrated corporate data framework to support multiple program activities at multiple scales. Continued implementation of the BLM's Enterprise Geospatial Strategy, through the GIS Transformation Project, supports this transition as well as various

high priority efforts such as the implementation and monitoring of the Greater Sage-Grouse planning effort, the Planning 2.0 initiative, regional mitigation activities, and renewable energy projects, while using GIS software that is consistent and integrated with the Department and other DOI Bureaus. This transformation will also improve the management of the BLM's geospatial data resources, and will enhance partnering with other Federal agencies, including the U.S. Geological Survey (for science) and the U.S. Fish and Wildlife Service (for consultation), while supporting communication and collaboration with State and tribal governments, as well as the public at large. By providing the infrastructure to manage and analyze data at multiple scales, the Geospatial Services program provides the BLM with the information and tools necessary to better understand the impacts of its decisions and support informed decision-making at all levels of the organization.

Socioeconomics – The Socioeconomics program helps resource managers weigh competing interests concerning access to and use of public lands and resources. Social and economic conditions are changing across the West and the public is demanding a more collaborative style of decision-making with reliable information on the human context and consequences of BLM actions. The need to maximize the BLM's return on investment is essential to achieving its mission, and thus measuring that return through the application of socioeconomic methods provides information essential for effective resource management. To provide a more complete picture of the benefits and costs of the BLM's resource management decisions, the Socioeconomics program is conducting a series of pilot studies to assess the feasibility and usefulness of ecosystem services methods and metrics. These approaches focus on quantifying the contributions of healthy ecosystems to human well-being, and the ways in which proposed actions may reduce or enhance these benefits.

Collaborative Action and Dispute Resolution – The Collaborative Action and Dispute Resolution (BLM-CADR) program provides services to support BLM's engagement with other Federal agencies, tribal, State, and local governments, stakeholders, and the public. Collaborative approaches can be applied internally and externally throughout decision-making and subsequent challenges. Generally speaking, collaboration refers to processes and arrangements that facilitate two or more individuals working together to solve a set of resource issues. Collaborative approaches ultimately enhance relationships and successful on-the-ground project implementation through shared commitment and resources. The CADR program optimizes planning investments and provides tools and skills for future BLM leaders.

NEPA – The BLM's NEPA program coordinates with the Council on Environmental Quality (CEQ), the Interior Office of Environmental Policy and Compliance, and other Federal entities on NEPA policy issues across the Federal government and within the Department. The BLM NEPA program also develops Bureau-wide NEPA policy and guidance, coordinates with other BLM national programs to develop program-specific guidance, and works with the BLM National Training Center to identify and meet NEPA training needs. In addition, the program coordinates with BLM State Offices to provide advice and support for NEPA compliance in the field. The BLM NEPA program has developed an internal, web-based BLM Greenhouse Gas & Climate Change NEPA Toolkit for use in preparing NEPA documents. The program also evaluates NEPA compliance within BLM States. These activities contribute to sound, well-supported Bureau planning and project decisions, and provide ongoing opportunities to strengthen working relationships with the public, stakeholder organizations, and partners in Federal, State, local, and tribal government.

Assessment and Monitoring - The AIM Strategy is being implemented through five sets of interrelated projects. The first three are designed to implement West-wide monitoring that is coordinated, and where possible, integrated with the monitoring activities of other Federal, State and non-governmental partners. The West-wide projects include the BLM Rangeland Assessment, the BLM Western Rivers and Streams Assessment, and the BLM Grass-Shrub Fractional Mapping Project. Some of the Federal partners' included in these efforts are the Natural Resource Conservation Service, Environmental Protection Agency, United States Geological Survey, and United States Forest Service. The two remaining projects are designed to help support immediate multi-State and field office priorities. These projects include efforts to monitor the effectiveness of BLM land use plans and to determine the effectiveness of BLM treatments and actions.

Public Involvement and Cooperating Agencies – The BLM involves interested members of the public and other governmental agencies—various Federal, State, local, county, and tribal entities—to share technical expertise, fulfill requirements for cooperation under various laws, and ensure consistent management where BLM-managed lands are adjacent to those of other government agencies or affect the resource management of other government agencies. The BLM also participates in cooperating agency and coordination training workshops with local government organizations to promote understanding of opportunities for local government participation in BLM land use planning and NEPA processes.

## 2016 Program Performance

Planning 2.0 – “Improving Land Use Planning” – In 2016, the BLM will finalize the Planning 2.0 initiative, which is focused on designing a more proactive and flexible approach to planning across landscapes at multiple scales. As part of Planning 2.0, the BLM will complete targeted changes to the planning regulations (43 CFR 1601 and 1610) and issue a revised Land Use Planning Handbook (H-1601-1). The planning process will focus on more up-front collaboration with partners to produce durable decisions that readily address the rapidly changing environment and conditions posed by climate change, rapid growth in the urban interface with public lands and expanding resource development, and other stressors. Finally, the BLM will review, and where necessary, revise its policy and procedures for monitoring the effectiveness of land use plan decisions as part of the 2.0 initiative.

Land Use Plan Revisions – In 2016, the Resource Management Planning program will continue revisions on the 38 plans that are in process. This estimate takes into consideration plans that will be completed and initiated in the interim. Active plan revisions are evaluated annually to determine progress and estimated costs for completion. Approvals to extend project schedules are coordinated through the Assistant Director for Renewable Resources and Planning.

In 2015, the BLM plans to initiate four new RMP revisions. The remaining six Western Oregon RMP revisions will be funded by the O&C Resource Management Planning program. Since 2001, the BLM has completed 77 plan revisions to improve the quality and effectiveness of its resource management. Another 50 planning projects are currently in progress and 29 plans are in need of revision or amendment to meet changing resource demands and conditions.

Land Use Plan Amendments – Newly revised plans are maintained through amendments funded by benefitting programs. Targeted amendments address emerging challenges and changing resource issues, extend the useful life of a plan, and reduce the potential for litigation.

In 2016, the Resource Management Planning program will continue to support high priority amendments, including those associated with renewable energy and transmission line projects.

NEPA – The NEPA program will coordinate with the Department to provide and implement BLM national guidance on considering climate change through the NEPA and land use planning processes. The NEPA program also will support BLM and Department policy development in other priority areas such as mitigation. In addition, the NEPA program will work with BLM's National Training Center to evaluate NEPA training needs throughout the BLM and to develop new training as needed.

Assessment and Monitoring - The Rangeland Assessment, the Western Rivers and Streams Assessment, and the Grass-Shrub Fractional Mapping Project, efforts to monitor the effectiveness of BLM land use plans, and efforts to determine the effectiveness of BLM treatments and actions will be implemented. Additionally, the monitoring and assessment protocols and core indicators developed as part of the AIM strategy will be used to gather information on terrestrial and aquatic site condition, ecological sites, special status species, treatments, disturbance of the public lands, fire, and land uses within sage-grouse habitat.

Collaborative Action and Dispute Resolution – The CADR program is implementing a new Strategic Plan designed to:

- Build awareness and understanding of collaboration and collaborative action both within and outside the BLM;
- Provide a framework for achieving consistency in collaborative efforts within BLM and with partners and stakeholders; and
- Focus on the practical application of collaborative principles and practices to meet the needs of the field.

## Activity: Resource Protection and Maintenance

### Subactivity: Resource Protection and Law Enforcement

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Law Enforcement	\$000	25,325	25,325	+270	-100	+0	25,495	+170
	FTE	131	131		+0	+0	131	+0

Summary of 2016 Program Changes/Internal Transfers for Law Enforcement:		(\$000)	FTE
	Internal Transfer to National Conservation Lands	100	+0
<b>Total</b>		<b>-100</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Resource Protection and Law Enforcement Program is \$25,495,000 and 131 FTEs and reflects an internal transfer of -\$100,000 from the 2015 enacted level.

**Internal transfer to National Conservation Lands (-\$100,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$100,000 will be transferred from Law Enforcement. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of National Conservation Land units in recent years.

### Program Overview

#### Program Components

The Resource Protection and Law Enforcement Program supports the Bureau's mission through the enforcement of Federal laws and regulations related to the use, management, and development of public lands and resources. The objectives of the program are to:

- Provide a safe environment for public land users and employees;
- Deter, detect, and investigate illegal activities, and resolve or refer such matters to appropriate officials; and
- Ensure revenues owed to the government for authorized or unauthorized uses are paid.

Resource Protection and Law Enforcement Program resources:

- Manage the law enforcement presence at special events and high-use recreation areas in order to support law enforcement needs exceeding the capacity of local field offices;
- Establish interagency agreements, partnerships, and service contracts with numerous State and local law enforcement agencies to secure supplemental support in the form of dispatch services, patrols of high use recreation areas, and assistance in the eradication of marijuana grown on public lands; and
- Utilize science-based methods and technology wherever possible to expand the capability to identify and monitor locations of illegal activity.

### Critical Factors

Critical factors affecting the Resource Protection and Law Enforcement Program on public lands include:

- Large-scale marijuana cultivation threatens public and employee safety; while the associated diversion of natural water sources, the use of fertilizers, herbicides, and pesticides, the illegal taking of wildlife, and the dumping of waste damages the ecosystems being exploited for illegal cultivation activities.
- The smuggling of humans and controlled substances on public lands near the Southwest Border destroys the natural and cultural resources on these public lands and threatens public and employee safety.
- Population increases in urban areas located near public lands have led to corresponding increases in off-highway vehicle use, illegal dumping of waste, theft of mineral materials and native plants for private landscaping, and the ignition of wildland fires.
- Emergencies and similar unexpected developments frequently require law enforcement responses that cannot be planned for or anticipated.
- Partner law enforcement agencies continue to request funding assistance through service contracts and support agreements, particularly in counties where public lands are heavily impacted by both legal and illegal activities.

### Demands, Trends and Resources

In 2014, the BLM saw a fifteen percent increase in the number of marijuana plants seized on public lands. Due to the scope of the marijuana cultivation problem on public lands and the large number of Federal, State, and local agencies involved in combatting the issue, it is difficult to establish a direct cause for the fluctuations seen in marijuana plant seizure statistics. However, several factors are believed to affect large scale marijuana cultivation on public lands, including:

- Increasingly effective utilization of multi-agency investigation and eradication efforts targeting illegal activities at all levels of drug trafficking organizations.
- Prosecution of individuals at all levels of multi-state drug trafficking organizations is disrupting organizational structures and reducing cultivation and distribution capabilities.

- Shifting weather patterns are altering the length of the growing season and the availability of natural water sources.
- Several State medical marijuana laws provide for the lawful cultivation of marijuana on private lands. Quantities of this lawfully cultivated marijuana are known to be sold outside the legal trade. This unlawful sale of legally cultivated marijuana, combined with the public's ability to lawfully cultivate marijuana for personal use purposes, may be altering levels of market supply and demand, thereby prompting fluctuations in the quantity of marijuana being cultivated on public lands.

## 2016 Program Performance

### Marijuana Cultivation on Public Lands –

The BLM plans to continue drug enforcement activities to include assigning special agents to investigate large scale marijuana cultivation on a full time basis in California and on a part time basis in other states to combat the expansion of marijuana cultivation activities; utilizing BLM rangers to conduct high profile patrol to detect and deter cultivation activities, eradicate marijuana cultivation sites, and provide security for personnel performing cultivation site rehabilitation efforts; and working with the Public Lands Drug Coordination Committee, under the Office of National Drug Control Policy, to utilize science-based methods to identify and address the environmental impacts of marijuana cultivation on public lands.

Marijuana Plants Seized by BLM on Public Lands			
FY 2011	FY 2012	FY 2013	FY 2014
436,455	156,014	195,417	225,291

Southwest Borderlands – The BLM will continue to patrol and conduct law enforcement activities on public lands situated within 100 miles of the Southwest Border in response to the heavy resource impacts and public safety concerns associated with illegal human and drug smuggling activities. The BLM continues to invest heavily in its Reclaim Our Arizona Monuments (ROAM) operation. Developed in response to the severe impacts occurring on the Bureau's Ironwood Forest and Sonoran Desert National Monuments, Operation ROAM combines the skills of BLM law enforcement officers with those of BLM resource specialists in order to improve public safety and remedy the resource damage caused by human and drug smuggling. This pairing of skill-sets serves to disrupt and deter smuggling operations and repair smuggling-related environmental damage caused by unauthorized roads and trails, large accumulations of trash, and concentrations of human waste.

Illegal Road Created by Smuggling Activity in the Sonoran Desert National Monument.

Archaeological Resource Protection Act (ARPA) Enforcement in the Four Corners Region – The BLM will continue to patrol and conduct investigations in the Four Corners region of the Southwest to deter and detect incidents of theft and vandalism of cultural, historical, and paleontological resources. The BLM will prosecute suspects and provide for the proper curation, storage, and disposition of recovered artifacts. The BLM continues to support the process of repatriating hundreds of thousands of archaeological and Native American artifacts recovered through the “Cerberus Action”; a highly successful multi-year investigation that targeted individuals suspected of looting archaeological sites and Native American graves in violation of ARPA and the *Native American Graves Protection and Repatriation Act*.

Off-Highway Vehicle (OHV) Recreation – The BLM will continue to dedicate law enforcement resources to the patrol of high-use OHV areas in order to protect sensitive resources and ensure the public is provided safe recreational opportunities on public lands.

Off-Highway Vehicle Activity on Public Lands				
	FY 2011	FY 2012	FY2013	FY2014
<b>OHV Incidents</b>	6,427	4,067	5,164	4,662

National Conservation Lands – The BLM will continue to patrol and conduct law enforcement activities within the National Conservation Lands in order to protect nationally significant resources and provide the public the opportunity to safely enjoy their public lands.

Wild Horses and Burros – The BLM will continue to enforce laws and investigate violations related to the harassment, unlawful removal, inhumane treatment, unauthorized destruction or sale of wild horses and burros.

Resource Damage, Loss and Theft – The BLM will continue to emphasize patrol, enforcement, and investigation actions to reduce the theft of public land resources, including mineral materials, timber and forest products, as well as improve production accountability and reduce theft of oil and gas resources. The BLM will investigate wildland fires to determine the origin and cause, identify responsible parties, and seek civil enforcement or criminal prosecution in cases involving negligence or arson.

Total Number of Incidents Reported				
FY 2011	FY 2012	FY2013	FY2014	
26,888	23,544	47,644	56,901	
Theft, Vandalism, and Misuse of Resources Incidents Reported				
	FY 2011	FY 2012	FY2013	FY2014
<b>Cultural, Paleontological &amp; Historical Resources</b>	72	140	153	184
<b>Minerals</b>	10	21	16	19
<b>Natural Features &amp; Other Wildland Resources</b>	107	106	177	539
<b>Timber, Forest Products, &amp; Native Plants</b>	190	279	456	634
<b>Wild Horses and Burros</b>	86	118	246	188
Wildland Fire Incidents Reported on Public Lands				
No. of Fire Related Incidents	FY 2011	FY 2012	FY2013	FY2014
	698	1,053	1,341	1,691

## Activity: Resource Protection and Maintenance

### Subactivity: Abandoned Mine Lands

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Abandoned Mine Lands	\$000	16,687	16,987	+159	+0	+2,800	19,946	+2,959
	FTE	63	63		+0	+0	63	+0

*Notes: The Central Hazardous Materials Fund from the Department of the Interior, Office of the Secretary, is a collaborative source of funding to address the goals of both the Abandoned Mine Lands and the Hazardous Materials Management programs. The 2015 estimated funding from the Central Hazardous Materials Fund is approximately \$3.5 million.*

*More information on the Central Hazardous Materials Fund is found in the Department of the Interior, Office of the Secretary, Department-wide Program Budget Justifications.*

*More information on the Central Hazardous Materials Fund is found in the Department of the Interior, Office of the Secretary, Department-wide Program Budget Justifications.*

Summary of 2016 Program Changes/Internal Transfers for Abandoned Mine Lands:	(\$000)	FTE
Red Devil Mine Remediation	+2,800	+0
<b>Total</b>	<b>+2,800</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Abandoned Mine Lands Management Activity is \$19,946,000 and 63 FTE, a program change of +\$2,800,000, and 0 FTE from the 2015 enacted level.

**Red Devil Mine Remediation (+\$2,800,000/0 FTE)** – The Red Devil Mine (RDM), located on the Kuskokwim River in Southwestern Alaska, is an abandoned cinnabar mine which produced mercury from 1939 thru 1971. In 2009, the BLM initiated a Remedial Investigation/Feasibility Study (RI/FS) of the Red Devil Mine site under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). As part of the CERCLA investigation, the BLM completed an RI which identified mine tailings near Red Devil Creek containing high concentrations of mercury, arsenic as well as antimony and that these metals are being released into the soil and water. In FY 2014, a non-time critical removal action was initiated and completed. This action removed mine tailings from Red Devil Creek and stabilized the stream channel to prevent further erosion and associated transport of contaminated tailings into the Kuskokwim River. The \$2.8 million proposed increase for 2016 would be used for ground and surface water monitoring, Proposed Plan Development and Remedial Design/Remedial Action (RD/RA) development.

### Legislative Change

**Reclamation Fee** – To provide additional resources for the reclamation of priority abandoned hardrock mines, the 2016 budget proposes a new AML fee on hardrock mine production. Just as the coal industry is held responsible for abandoned coal sites, the Administration proposes to hold the hardrock mining industry accountable for the remediation of abandoned hardrock mines. The legislative proposal will levy an AML fee on uranium and metallic mines on both public and private lands. The proposed AML fee on the production of hardrock minerals will be collected on the volume of material displaced after January 1, 2016. The receipts would be

divided between Federal and non-Federal land actions. The Secretary will disperse the share of non-Federal funds to each State and Tribe based on need. Each State and Tribe will select its own priority projects using established national criteria. The proposed hardrock AML fee and reclamation program will operate in parallel with the coal AML reclamation program as part of a larger effort to ensure the Nation's most dangerous abandoned coal and hardrock AML sites are addressed by the industries that created them.

### **Program Overview**

The Abandoned Mine Lands (AML) program's primary objective is to eliminate or minimize the environmental impacts as well as the physical safety hazards associated with historic hardrock mining activity within the National System of Public Lands (NSPL). The AML program addresses mine sites that were abandoned prior to January 1, 1981, the effective date of the BLM's surface management regulations (43 CFR Subpart 3809).

The program's objectives are:

- Protecting public health and safety as well as reducing inherent liabilities by mitigating physical safety hazards and/or minimizing environmental impacts on the NSPL;
- Restoring the Nation's watersheds impacted by abandoned mines on public lands;
- Educating the public about the potential dangers posed by abandoned mines as well as the actions the BLM takes to address those dangers;
- Implementing a risk-based, watershed approach that embraces partnerships to effectively leverage funding and facilitate timely AML project completion;
- Conducting inventories of yet undiscovered abandoned mine features and sites as well as performing the validation, recordation, and evaluations of those characteristics;
- Asserting the BLM's lead role in the evaluation and remediation of AML sites located on and affecting the NSPL;
- Implementing cost avoidance/cost recovery strategies pursuant to CERCLA;
- Restoring abandoned mine lands to productive uses including, but not limited to recreation, fish and wildlife habitat, renewable energy, and the preservation of historical/cultural resources;
- Integrating AML goals and priorities into the BLM land-use planning efforts as well as other BLM functions and programs;
- Performing post-completion project monitoring to ensure the effective short and long term remediation of abandoned mine land sites.

#### ***Abandoned Mine Land Inventory***

The AML program utilizes a database to record and track the thousands of AML sites and features within the NSPL. The Abandoned Mine Site Cleanup Module (AMSCM) currently contains over 84,000 features, such as physical hazards and environmental impacts, associated with 46,000 sites.

#### ***Risk-based Prioritization***

In addressing the environmental and physical safety hazards on the NSPL, the BLM places the greatest priority on completing on-the-ground remediation at high-priority inventoried and characterized sites as well as newly discovered sites that pose higher risks due to population proximity, expansion and recreational activities in remote locations. The prioritization process ranks sites based on environmental and physical safety hazards and takes into account factors including water quality impairments and violations, watershed and other environmental impacts,

threats to public health or safety, existence of partnerships, cost avoidance/cost recovery, continuing/expediting existing on-the-ground projects, location, and cost efficiency.

### ***Environmental Response and Remediation***

The BLM's environmental cleanup and remediation activities are guided by public laws such as CERCLA, the Clean Water Act, and the Federal Land Policy and Management Act. The BLM uses its CERCLA authority to remediate environmental contamination on public land, prepare and implement emergency response contingency plans for oil and chemical spills, and recover costs from Potentially Responsible Parties.

### ***Physical Safety Hazards***

The majority of sites recorded in the AMSCM database contain physical hazards such as open mine shafts and pits, unstable rock, decayed mine support beams, and explosive as well as toxic chemicals. These physical safety hazards pose threats to humans and wildlife and are a high priority for the AML program. Temporary mitigation, such as fencing and signage, biological and archeological clearances, permanent closure, and installation of controlled access barriers are the most common remediation activities.

### ***Partnerships***

Partnerships with other Federal, State, local, and tribal agencies are a vital component of the AML program. Activities include the development of agreements with States for abandoned mine closures, cleanup coordination, and development of joint policies and procedures. The BLM also enters into assistance agreements with non-governmental organizations, for example, with Bat Conservation International (BCI). The BCI assists the BLM in identifying abandoned mines that provide valuable bat habitat and helps to preserve it with bat-friendly closures.

### ***Other Funding Sources:***

In addition to the AML program funding, the BLM utilizes, in the appropriate circumstances, funding from the Department's Central Hazardous Materials Fund (CHF) and the Department's Natural Resource Damage Assessment (NRDA) Restoration Fund. The CHF was established by Congress to be used for necessary expenses incurred for response actions conducted pursuant to the CERCLA, as amended as well as the regulatory requirements codified in the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). The CHF is a competitive process among Department Bureaus and functions as a source of no-year funding for CERCLA cleanup projects and as a repository for funds recovered from potentially responsible parties (PRP) pursuant to sections 107 or 113 of CERCLA, 42 U.S.C. § § 9607, 9613.

The purpose of the NRDA process is to restore public natural resources injured or destroyed by releases of hazardous substances or oil spills, and to compensate the public, through the natural resource damage trustee, for losses of the natural resources that resulted from the releases or spills. The costs of the restoration are borne by the parties who are responsible for the release or spill. Response actions (CERCLA) and NRDA enforcement may be integrated to maximize efficiency in restoring the health, diversity and productivity of BLM-managed land.

### ***Critical Factors***

Critical factors that impact the effectiveness of the AML Program include the following:

- The need to support maintenance and monitoring activities at previously remediated sites grows as new cleanup efforts are undertaken and completed. The BLM must

- return to these sites to inspect the short and long term efficacy of the reclamation/restoration.
- The development of urban areas and related visitation has brought about growth in the public's access to BLM-managed lands that were once considered remote. This increased ease of access by the public has resulted in an increase of exposure to the physical and environmental hazards associated with AML sites.
- AML restoration projects can be highly complex in environmental scope and impact. Environmental analyses and studies are conducted to determine the extent of contamination and to identify restoration and remediation strategies. Typically, a multiple-year, phased approach is required to complete restoration/remediation activities due to funding limitations and study times.

### **2016 Program Performance**

In 2016, the AML Program anticipates completing the following elements:

- Water quality: Remediating approximately 1800 acres to improve water quality;
- Physical Safety Hazards: Closing 900 physical safety hazards on AML;
- Inventory: Adding 2,800 new AML features to AMSCM;
- Monitoring and maintenance: Returning to 1,300 remediated sites to check on the efficacy of physical safety closures and/or environmental remediation; and
- Complex Contaminated Site Cleanups—Leveraging funding with other Federal programs to address cleanups at large, complex sites that pose an imminent risk to the public.

## Activity: Resource Protection and Maintenance

### Subactivity: Hazardous Materials Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Hazardous Materials Management	\$000	15,612	15,612	+204	-30	+0	15,786	+174
	FTE	94	94		+0	+0	94	+0

*Notes: The Central Hazardous Materials Fund from the Department of the Interior, Office of the Secretary, is a collaborative source of funding to address the goals of both the Abandoned Mine Lands and the Hazardous Materials Management programs. The 2015 estimated funding from the Central Hazardous Materials Fund is approximately \$3.5 million.*

*More information on the Central Hazardous Materials Fund is found in the Department of the Interior, Office of the Secretary, Department-wide Program Budget Justifications.*

<b>Summary of 2016 Program Changes/Internal Transfers for Hazardous Materials Management:</b>	(\$000)	FTE
Internal Transfer to National Conservation Lands	-30	+0
<b>Total</b>	<b>-30</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Hazardous Materials Management activity is \$15,786,000 and 94 FTE, and reflects an internal transfer of -\$30,000 and 0 FTE.

**Transfer to National Conservation Lands (-\$30,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$30,000 will be transferred from Hazardous Materials Management. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

### Program Overview

The Hazardous Materials Management Program ensures BLM compliance with Federal and State environmental regulations. The program also exercises the legal authorities granted to the BLM to protect human health and the environment by cleaning up hazardous waste sites. Additionally, the program implements Federal initiatives directed at improving environmental management and sustainability. Program activities include:

- Minimizing environmental contamination on public lands;
- Reducing risks associated with environmental hazards;

- Restoring natural and cultural resources adversely impacted by oil discharges and hazardous substance releases;
- Correcting environmental compliance issues;
- Utilizing environmental management systems to identify, manage, and accomplish operation sustainability objectives and targets, and other significant aspects of BLM operations that impact environmental performance;
- Reducing the generation of wastes or contaminants at the source, thereby reducing the level of hazards to public health or the environment; and
- Partnering with the BLM Law Enforcement Program to remove illegally dumped material such as trash, hazardous materials, and abandoned vehicles.

The Hazardous Materials Management Program differs from the Abandoned Mine Lands (AML) Program. While the AML Program focuses on physical and environmental hazards associated with hardrock mines abandoned prior to 1981, the Hazardous Materials Management Program has a broader focus of environmental hazards on all public lands. Additionally, while the AML Program addresses both physical and environmental safety hazards at AML sites, the Hazardous Materials Management Program addresses environmental hazards only, but may support addressing environmental hazards at high-priority AML sites as well.

### **Critical Factors**

Critical factors that impact the effectiveness of the program include:

- The need to provide maintenance and monitoring activities at previously remediated sites increases as new cleanup efforts are undertaken and completed;
- There are currently 172 sites on the Environmental Disposal Liability list which require some degree of remediation;
- Urban growth and development is resulting in increased public access to BLM-managed lands. This trend has not only increased the number of illegal dumps on public lands, but has also heightened the need to address contaminated sites rapidly in order to reduce public health and safety hazards. Increased real-estate development and property transfer activities also require environmental site assessments and a cadre of trained and certified BLM environmental professionals; and
- Illegal immigration and smuggling activities along the Arizona, New Mexico and California borders with Mexico cause damage to public lands, including national monuments and designated wilderness areas. Such damage includes unauthorized roads and trails; cut fences; damaged vegetation; contaminated water resources; and large accumulations of solid and hazardous waste.

### **Means and Strategies**

The BLM uses the following strategies to operate the program:

- Developing, implementing, and maintaining emergency response contingency plans (i.e., oil and chemical spill);
- Leveraging funding with partners to respond to community needs and concerns;
- Assessing and maintaining BLM facilities to ensure compliance with environmental laws and regulations;
- Searching for parties responsible for contamination on public lands to seek their participation in remediating the site or recover costs;

- Partnering with other environmental protection-related agencies such as the U.S. Fish and Wildlife Service, the Environmental Protection Agency, the U.S. Army Corps of Engineers, and the U.S. Forest Service, as well as with other BLM programs, including the AML, Law Enforcement, and Recreation Programs;
- Partnering with State, law enforcement, and volunteer groups to deter and mitigate damage to public lands along the Southwest border from illegal immigration and smuggling activities;
- Using the Abandoned Mine Site and Cleanup Module database to track and prioritize sites based on the level of risk to human health and the environment; and
- Using the HMM Special Cleanup Fund (SCF) to address the removal and remediation of hazardous substances (solid waste, hazardous waste and hazardous substances). The SCF was created as a mechanism to manage larger, high-risk hazardous material sites not currently eligible for other funding sources.

### Other Funding Sources

In addition to program funding, the BLM utilizes, in the appropriate circumstances, funding from the Department's Natural Resource Damage Assessment Restoration Fund (NRDAR), and the Department's Central Hazardous Materials Fund (CHF).

The BLM uses the NRDAR Fund to identify damage to natural resources; work with the public and the polluters to plan restoration efforts; seek payment from the polluters for resource restoration costs; and restore or replace resources to pre-contamination conditions. Project scoping and start-up funds may come from Interior. Assessment funds are provided through Interior or negotiated with polluters. Restoration funds come from settlements with polluters, either through negotiations or legal action. Funds from these settlements are then used to restore the damaged resources at no expense to the taxpayer. Settlements often include the recovery of costs incurred in assessing the damages.

The CHF includes appropriated and recovered funds, and supports response actions, remedial investigations, feasibility studies, and cleanup at sites contaminated by hazardous substances. These sites are prioritized based on human health and ecological risk, regulatory factors, and the level of Potentially Responsible Party involvement. Proposals are reviewed and prioritized first by BLM State Offices through a yearly nomination process, and then by Departmental representatives. The BLM currently manages 26 CHF sites. In 2015, the CHF plans to allocate \$3.5 million for BLM sites.

### 2016 Program Performance

The program will continue to perform the following activities in fiscal year 2016:

- Complex Contaminated Site Cleanups – Leverage funding with other Federal programs to address cleanups at hazardous waste sites that pose imminent risk to the public;
- Environmental Compliance – Support, with the Engineering and Safety Programs, the performance of Compliance Assessment – Safety, Health, and the Environment (CASHE) audits. In 2016, CASHE audits will be performed at twenty-nine organizational units;
- Illegal Dumping Prevention - Continue prevention efforts by targeting cleanups, outreach, and monitoring to promote safety and mitigate environmental damage;

- Emergency Response - Respond to and clean up oil spills and hazardous materials releases;
- Munitions and Explosives of Concern - Continue collaboration with other Department of the Interior Bureaus, as well as the Department of Defense, in the development of a database that prioritizes, tracks and monitors munitions and explosives of concern, to ensure visitor and employee safety and to ensure the cleanup of military training sites including Formally Used Defense Sites. The BLM is working with the Department to develop geo-spatial tools to augment the relational database. The program will also support the Lands, Realty, and Cadastral Survey Division in documentation of military sites in LR200 and Case Files;
- Special Cleanup Fund - Remove or remediate hazardous materials sites in Alaska, California, Colorado Idaho, New Mexico, Nevada, Montana, and Oregon.
- Environmental Management System - Continue implementation of the EMS in all States and Centers. Provide for 3<sup>rd</sup> party audits to ensure compliance with Department standards. The Washington Office has implemented an EMS to improve the Bureau's sustainability performance as tracked on the Office of Management and Budget scorecard;
- Sustainability - Continue participation in the Department Technical Working Group in order to meet Department-wide sustainability goals. Also continue participation in the Bureau-wide Technical Working Group to complete the annual Green House Gas (GHG) Inventory. In addition, develop operational controls to enhance environmental performance, including reducing GHG emissions, energy use, and potable water use. Support State BLM projects initiated to meet sustainability targets set for their State operations; and
- Southwest Border Cleanup – Continue to leverage funds and resources with partners to conduct remediation and restoration activities along the Southwest border.

# Transportation and Facilities Maintenance

## Activity: Transportation and Facilities Maintenance

		2014 Actual	2015 Enacted	2016 President's Budget			Requested Amount	Change from 2015
				Fixed Costs	Transfers	Program Changes		
Annual Maint. & Ops	\$000	38,637	38,637	+491	-686	+500	38,942	+305
	FTE	248	248		+0	+0	248	+0
Def. Maint. & Cap. Improvements	\$000	26,995	26,995	+152	+0	+4,240	31,387	+4,392
	FTE	43	43		+0	+0	43	+0
Total, Transportation & Facilities	\$000	65,632	65,632	+643	-686	+4,740	70,329	+4,697
	FTE	291	291		+0	+0	291	+0

The 2016 budget request for Transportation and Facilities Management is \$70,329,000 and 291 FTE, and reflects an internal transfer of -\$686,000 and program increases totaling +\$4,740,000 and 0 FTE from the 2015 enacted level.

### Activity Description

The goals of the Transportation and Facilities Maintenance Programs are to protect employee and visitor safety, resource values, and public investments, as well as to provide facilities management and public lands stewardship. To accomplish this, the BLM focuses on:

- Operating clean, safe, and fully functional facilities at recreation sites;
- Performing annual maintenance on all facilities;
- Conducting comprehensive assessments on the physical condition and regulatory compliance for all facilities;
- Implementing the Five-Year Deferred Maintenance and Capital Improvement Plans;
- Improving capabilities to manage facilities maintenance through development of an automated facility asset management system; and
- Implementing property and asset management planning to accurately inventory and describe assets, establish appropriate levels of investment, and adopt public or commercial benchmarks and best practices.

Within the Transportation and Facilities Maintenance Activity, two subactivities contribute to the stewardship of the BLM facilities:

- Deferred Maintenance and Capital Improvements
- Annual Maintenance and Operational Costs

### Critical Factors

In the contiguous United States, two-thirds of BLM-managed lands are within a one-hour drive of urban areas. As population grows, public use places increasing demands on facilities and resources. Additionally, BLM-managed roads now experience much higher usage rates than when those roads were built, increasing the cost of maintaining them in a safe condition.

## Means and Strategies

In conducting program work, the BLM adheres to the requirements of Executive Order 13327, "Federal Real Property Asset Management." This includes:

- Using public and commercial benchmarks and best practices;
- Employing life-cycle cost-benefit analysis;
- Providing appropriate levels of investment;
- Accurately inventorying and describing all assets; and
- Providing safe, secure, and productive workplaces.

The BLM uses two industry standard performance measures, the Asset Priority Index and the Facilities Condition Index (FCI), for identifying the condition of constructed assets and targeting assets that can be disposed of or require additional annual maintenance or supplemental funding from deferred maintenance. These measures help identify the condition of constructed assets and determine whether the asset requires additional annual maintenance, funding from deferred maintenance, or if the asset should be disposed. Additional criteria used to prioritize projects are the Scope of Benefits, Investment Strategy, and Consequences of Failure to Act. The 4 criteria put emphasis on projects that:

- Repair the highest priority projects that are in the poorest condition;
- Are clearly aligned with DOI, and bureau initiatives and strategic goals;
- Have a positive return on investment that leverages outside interest and/or reduces operation and maintenance liabilities;
- Have unacceptable risk levels if the project is not completed.

### Assessment Process

The BLM conducts baseline condition assessments of recreation sites and administrative sites, including on-site buildings and structures; Maintenance Level 3, 4, and 5 roads, bridges, dams, and major trails. The condition assessment process identifies deferred maintenance needs and determines the current replacement value of constructed assets. Knowing the estimated cost of deferred maintenance and the replacement value of recreation and administrative sites allows the BLM to use the industry standard FCI as a method of measuring the condition and change of condition of facilities.

The FCI is the ratio of accumulated deferred maintenance to the current replacement value ( $FCI = \text{Deferred Maintenance} / \text{Current Replacement Value}$ ). It is an indicator of the overall condition of capital assets. The general guideline is that FCI should be below 0.15 for a facility to be considered in acceptable condition. The Facility Asset Management System documents the FCI, and it is a major tool used for management decisions on the disposal of assets.

## Activity: Transportation and Facilities Maintenance

### Subactivity: Annual Maintenance and Operational Costs

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Annual Maint. & Ops	\$000	38,637	38,637	+491	-686	+500	38,942	+305
	FTE	248	248		+0	+0	248	+0

Note: - The Road Maintenance permanent mandatory appropriation is a collaborative activity of the Annual Maintenance & Operations program accounting for less than \$100,000 in available receipts from public domain lands; for more information on road maintenance, see the Oregon and California Grant Lands and Permanent Operating Funds chapters

Other Resources Supporting Annual Maint. & Ops:					
		2014 Actual	2015 Estimate	2016 Estimate	Change from 2015
Quarters Maintenance	\$000	692	669	620	-49
	FTE	1	1	1	+0

**Notes:**

- Quarters Maintenance amounts are shown as new budget authority derived from rent on BLM employee-occupied quarters; Section 320 of the 1985 Interior and Related Appropriations Act (Public Law 98-473) appropriates these funds on a permanent basis. More information on Quarters Maintenance is found in the Permanent Operating Funds chapter.

- Amount in 2014 and 2015 for Quarters Maintenance shown net of sequestration

- Actual and estimated obligations, by year for Quarters Maintenance are found in President's Budget Appendix under the BLM section.

### Justification of 2016 Program Changes

The 2016 budget request for the Annual Maintenance program is \$38,942,000 and 248 FTE, and reflects an internal transfer of -\$686,000 and 0 FTE and a program change of +\$500,000 and 0 FTE from the 2015 enacted level.

**Enhance Core Capability (+500,000/+0 FTE)** – The increase will fund additional preventive maintenance on constructed assets supporting administrative, recreational, and infrastructure needs, with an emphasis in areas under greatest pressure from community growth.

**Transfer to National Monuments & National Conservation Areas (NM&NCAs) (-\$686,000/0 FTE)** – In 2016, the BLM proposes to transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Of the \$5.0 million transfer, \$686,000 will be transferred from Annual Maintenance and Operational Costs. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer

units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount this subactivity has contributed to the operations of the National Conservation Lands in recent years.

## **Program Overview**

### **Program Components**

The Annual Maintenance Program provides for visitor and employee safety and ensures proper facilities management. Funding provides for emergency, preventive, and cyclical maintenance, and baseline facility condition assessments. The program manages operations, facility services and landscape upkeep in order to maintain BLM facilities in good condition and minimize new deferred maintenance needs.

## **2016 Program Performance**

In 2014, the BLM reported 4,747 structures and 793 buildings in the Federal Real Property Profile. These structures consist of dams, bridges, electrical and communication systems, trails, and roads. In 2016, this appropriation would allow the BLM to maintain 89 to 90 percent of facilities at an acceptable level.

## Activity: Transportation and Facilities Maintenance

### Subactivity: Deferred Maintenance and Capital Improvements

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Def. Maint. & Cap. Improvements	\$000	26,995	26,995	+152	+0	+4,240	31,387	+4,392
	FTE	43	43		+0	+0	43	+0

#### Summary of 2016 Program Changes/Internal Transfers for Deferred Maintenance & Capital Improvements:

	(\$000)	FTE
High-Priority Projects	+4,240	+0
<b>Total</b>	<b>+4,240</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Deferred Maintenance and Capital Improvements Program is \$31,387,000 and 43 FTE, a program change of +\$4,240,000 and 0 FTE from the 2015 enacted level.

**High-Priority Projects (+\$4,240,000/0 FTE)** – The requested increase will support additional facility repair projects that otherwise would not have been funded. Priorities will be identified using the Department's capital investment guidelines. The projects include sustainability upgrades, radio infrastructure, and bridge, dam, and facilities repairs on critical assets.

### Program Overview

#### Program Components

The program:

- Improves the overall condition of BLM facilities;
- Renews aging infrastructure;
- Provides professional engineering services;
- Manages environmental and structural risks of facilities;
- Manages corrective actions identified through Compliance Assessment Safety, Health and the Environment Audits;
- Manages corrective actions identified for accessibility provisions;
- Manages corrective actions for improvement of energy savings; and
- Constructs facilities for visitors and employees that comply with Federal requirements.

The program prioritizes health and safety work and mission critical assets, followed by resource protection, energy and sustainability, and code compliance. This includes replacing and reconstructing existing roads, trails, bridges, recreation and administrative facilities, and buildings.

Energy conservation and sustainability are primary considerations for all new projects. Projects incorporate the Federal Five Guiding Principles and follow the BLM's Sustainable Buildings Implementation Plan to reduce operational costs, improve energy efficiency, and conserve water.<sup>6</sup> Funding is specifically targeted to assess a building's sustainability performance and to make improvements on the identified deficiencies. The BLM priority is to make every building as sustainable and energy efficient as possible. The planning of all the BLM's Deferred Maintenance projects includes consideration of the possible effects climate change may have on the future operations of its facilities. The sites are assessed to determine if design or site adjustments need to be incorporated to account for possible climate change effects.

The BLM Asset Management Plan prioritizes funding to the highest priority assets and plans the disposal of unneeded assets to attain a portfolio of constructed assets in good physical and functional condition, aligned with current and projected requirements.

In an effort to control costs and save future operational maintenance funding, every project is assessed to determine if space can be economized and unneeded facilities can be disposed. The BLM is targeting three percent of its total budget to dispose of unneeded assets and to align to a more efficient portfolio. Every new building project considers alternatives to consolidate current operations and space to gain the best efficiencies and monetary savings.

The BLM categorizes deferred maintenance needs identified through condition assessments and other inspections into specific projects which are proposed in the Five-Year Deferred Maintenance and Capital Improvement Plan. To manage these projects, the BLM observes the following guidelines:

- For projects with estimated costs of \$10 million or more, the program schedules one year for project planning, one year for design, and no more than two years for construction.
- For projects with estimated costs between \$2 million and \$10 million, the program schedules one year for project planning and design, and no more than two years for construction.
- For projects with estimated costs below \$2 million, the program schedules one year for planning and design and one year for construction.

The Five Year Deferred Maintenance and Capital Improvement Plan is updated annually using the Department of Interior's planning guidance through the budget document Attachment G. Attachment G uses 4 categories in assessing a projects funding priority. Ultimately, Attachment G prioritizes a project using its condition and mission priority, those highest priority buildings in the worst condition are the highest priority for funding. In recent years, the BLM expanded planning for each new project to include the impacts of expected life cycle costs on BLM's total budget. Project submissions include the estimated operation expenses, energy cost saving and sustainability actions, and the improvement in facility condition as a result of the project.

---

<sup>6</sup> This policy is supported by the provisions of the Energy Policy Act of 2005 (EPACT 2005), Energy Independence and Security Act of 2007 (EISA) and the goals of Executive Orders 13123 and 13514

## 2016 Program Performance

In 2016, the planned accomplishments in the Deferred Maintenance and Capital Improvements Program include 69 deferred maintenance projects and nine disposal projects. The deferred maintenance projects include corrective actions, sustainability improvements and accessibility projects. The planned projects in 2016 will consolidate operations and dispose of unneeded assets in the Eastern States office, target mission critical assets in dire need of repair and improve the condition of a number of bridges, recreation sites, and administrative sites that require maintenance requirements.

This page intentionally left blank.

# National Conservation Lands

## Activity: National Conservation Lands

### Subactivity: National Monuments and National Conservation Areas

	2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
			Fixed Costs	Transfers	Program Changes	Requested Amount	
NMs & NCAs							
<i>\$000</i>	31,819	31,819	+461	+5,009	+11,181	48,470	+16,651
<i>FTE</i>	241	241		+0	+20	261	+20

**Summary of 2016 Program Changes/Internal Transfers for NMs & NCAs:**

	(\$000)	FTE
Secretary's Conservation Vision for Excellence	+11,181	+20
Internal Transfer from other MLR subactivities	+5,009	+0
<b>Total</b>	<b>+16,190</b>	<b>+20</b>

### Justification of 2016 Program Changes

The 2016 budget request for the National Monuments and National Conservation Areas (NMs and NCAs) subactivity is \$48,470,000 and 261 FTE. This reflects a program increase of +\$11,181,000 and +20 FTE and an internal transfer of +\$5,009,000 and 0 FTE from the 2015 enacted level.

**America's Great Outdoors (+\$11,181,000/+20 FTE)** – The National Conservation Lands comprise 30 million acres of the most ecologically rich and culturally significant of lands managed by the Bureau of Land Management. Our nation's newest collection of protected public lands—standing in stature with our National Parks, National Forests and National Wildlife Refuges—National Conservation Lands are part of an active, vibrant landscape where people live, work and play. They are the mountains, hills and trails where people enjoy the outdoors, exercise and spend time with family and friends. American history is created within the National Conservation Lands with unique cultural, ecological and scientific values. These are places that spark the imagination. Their spacious beauty has drawn people to the West for generations. These landscapes of the American spirit represent an opportunity to leave something for the future that transcends Administrations and will span generations.

Eleven new National Conservation Lands units have been designated during the current Administration; the latest and boldest is the 500,000-acre Organ Mountains-Desert Peaks National Monument in southern New Mexico. The Organ Mountains-Desert Peaks area is important for its ruggedly beautiful landscape and the significant scientific, historic, and prehistoric resources found there. The abundant resources testify to over 10,000 years of vibrant and diverse human history of many peoples. The protection of the Organ Mountains-Desert Peaks area will preserve its cultural, prehistoric, and historic legacy and maintain its diverse array of natural and scientific resources, ensuring that the prehistoric, historic, and scientific values of this area remain for the benefit of all Americans. Continuing this legacy and commitment to conservation requires higher levels of support than the 2015 enacted appropriation. The 2016 budget request supports the advancement of the President's conservation initiative to reconnect Americans to the great outdoors and ensure that public lands reflect the diversity of our country and America's rich history of leadership.

The 2016 budget request includes an increase of \$11.2 million to support critical resource protection and maintenance work on the National Conservation Lands. Efforts to be undertaken will include eradicating invasive plants that jeopardize native species and contribute to unnatural, increasingly difficult-to-manage fire regimes; protecting equipment investments from weather; conducting inventories of the world-class and often endemic resources, objects, and values for which each NM&NCA was designated; and implementing resource, science and travel management plans. The BLM will also address additional maintenance needs, such as signs and kiosks, campground benches, larger trash dumpsters, bathroom facilities, and new access-point facilities needed to ensure the public health and safety of visitor centers. Funding to the visitor centers will accommodate public demand for increased hours of operation, program offerings and greater capacity on National Conservation Lands.

The increase also supports critical staff positions, including dedicated managers, essential resources specialists, outdoor recreation planners, partnership/volunteer/youth coordinators, law enforcement, and seasonal park and river rangers needed to staff visitor centers and manage the unique values of the units. Funds will allow the program to support geographical information systems technicians to implement the Director's recreation mapping project in the States that will support the Secretary's youth initiative and implement priority restoration work.

**Transfer to National Conservation Lands (+\$5,009,000/+0 FTE)** - In 2016, the BLM will transfer a total of \$5.0 million from various MLR subactivities to the National Conservation Lands. Since its creation in 2009, the BLM has not had the financial resources to undertake a systemic effort to incorporate newer units into its funding structure. This transfer will create consistency, clarity and a common approach to funding recurring labor and operational costs across the units of the National Conservation Lands. The transfer amount represents the amount these other MLR subactivities have contributed to the operations of the National Conservation Lands in recent years.

## Program Overview

This program encompasses the BLM's 20 NMs, 16 NCAs, three Outstanding Natural Areas, one Cooperative Management and Protection Area, and one Forest Reserve. The BLM's NMs and NCAs are primarily managed to conserve, protect, restore, and enhance America's national heritage. These 9.2 million acres of public lands are often referred to as the crown jewels of the BLM.

The program is unique in its management of areas established by Congress or Presidential proclamation for conservation purposes because it is managed under the principles of multiple-use and sustained yield. Traditional activities such as hunting, livestock grazing, and Native American cultural and religious uses continue throughout many of these landscapes. Oil and gas development also continues on some of these public lands where valid rights existed prior to their designation. This multiple-use approach honors the essential role these working landscapes have played in molding the history, culture, and economy of the western U.S.

These special places span the breadth of BLM-managed public lands and include such diverse lands as the 1.2 million-acre Steese NCA, which protects two of Alaska's most important caribou herds; America's first NCA—King Range National Conservation Area, designated in 1970 along California's Lost Coast; Jupiter Inlet Lighthouse Outstanding Natural Area on the Atlantic coast of Florida; and Colorado's Canyons of the Ancients NM which protects the

greatest known density of First American archeological sites in the United States, including cliff dwellings, villages, kivas, shrines, agricultural fields, and rock art, some of which are over 10,000 years old.

### Connecting People to the Land

Because more than 64 million people live within 100 miles of BLM-managed lands in the West, and the elevated profile of public lands designated as NMs and NCAs, regional, national, and international visitors are attracted to the National Conservation Lands. Consequently, more people recreate on public lands than ever. The high level of visitation presents the BLM with the challenge of providing more intensive recreation management and law enforcement to ensure visitors have high-quality, diverse, self-directed recreation opportunities. For example, in Nevada, over 1.5 million people visit Red Rock Canyon NCA every year.

### Engaging the Next Generation

Grand Staircase Escalante NM, Utah

The Department of the Interior is engaging the next generation through the Play, Learn, Serve, and Work Initiative. Consistent with this initiative, the program engages, educates, and employs youths, veterans, and military families. At the Grand Staircase-Escalante NM in southern Utah, a native plant restoration project is an innovative and highly regarded partnership that effectively connects youth to the great outdoors through habitat restoration.

The BLM worked with the monument's friends group to engage over 100 students from the nearby Kanab High School in seed collection and propagation, invasive plant species removal, and planting the drought-tolerant native plant seedlings they had grown to restore wildlife habitat. This partnership offers hands-on experiences in the natural sciences to students. The BLM engages in over 50 similar partnerships that work to support the NMs and NCAs.

### Advancing Scientific Knowledge

The NMs and NCAs serve as long-term reserves within an ecological landscape for vulnerable native plant and animal populations. Scientific data on the conditions, trends, and relationships of these resources are critical for managers when determining how to successfully adapt management to address land health stressors, such as climate change, changing fire regimes, the spread of invasive and exotic species, and human population growth.

Grand Gulch Wilderness Study Area, Utah

## Creating Economic Opportunities

Communities surrounding the units of the National Conservation Lands derive significant economic benefits through tourism. The BLM, in cooperation with local communities, supports the creation of recreation and visitor facilities in nearby gateway communities rather than building extensive facilities within the National Conservation Lands.

In addition to the revenue generated by tourism, the National Conservation Lands also provide revenue from energy development as well as traditional uses such as ranching and mineral extraction. Las Cienegas NCA's relationship with grazing spans generations. The BLM continues to work with ranchers and permittees to enhance grazing practices and protect natural resources in this spectacular part of Southern Arizona. In Colorado, over 80 percent of the Canyons of the Ancients NM are leased for oil and gas development. Canyons of the Ancients NM continues to lead the way in development and implementation of best practices to balance protection of Native American cultural resources and extraction of gas from one of most highly-concentrated carbon dioxide fields in the Nation.

Organ Mountains-Desert Peaks NM, New Mexico

<b>National Monuments &amp; National Conservation Areas Funding By BLM State Office</b>			
<b>BLM State Office</b>	<b>2014 Actual</b>	<b>2015 Enacted</b>	<b>2016 Request</b>

*†Includes funds supporting Washington Office, National Operations Center, National Training Center, Bureau-Wide Administrative Support, and Fixed Costs Changes to be allocated*

*‡Funds supporting to high priority projects needs as determined by an annual work plan process*

### **2016 PROGRAM PERFORMANCE**

The program instituted a new bureau-wide performance measure in 2014: “Percent of designated Monuments and NCAs inventoried for the resources, objects, and values for which they were designated.” The BLM began data collection in fiscal year 2014, focusing on collecting baseline data for all NMs and NCAs.

The program will focus on managing NMs and NCAs as an integral part of the BLM’s multiple-use and sustained-yield mission, including by showcasing the accomplishments of BLM programs such as rangeland resources management, natural gas development, and recreation. Key accomplishments planned in 2016 include:

- Implementing completed land use plans for NMs and NCAs designated in the Omnibus Public Land Management Act of 2009, as required by law.
- Conducting inventories for the presence of the unique resources, objects, and values for which NMs and NCAs were designated.
- Developing science plans for NMs and NCAs to provide a foundation for decision-making.

- Using NMs and NCAs as outdoor laboratories for new, innovative management practices, including the use of livestock grazing to manage both invasive and special status plants, and adaptive management.
- Eradicating and controlling invasive plants, conducting vegetation treatments, removing decommissioned roads, restoring healthy ecosystem function, and promoting habitat connectivity and landscape-scale ecological sustainability.
- Providing resource protection and public safety.
- Engaging communities to provide sustainable recreational experiences to visitors, which benefits local economies.
- Fostering partnerships, including with Friends groups, for NMs and NCAs.
- Expanding volunteer opportunities to permit more important contributions that volunteers make to NMs and NCAs.
- Providing highly regarded education and interpretation to the public.
- Recruiting and retaining youth for employment in conservation.

# Challenge Cost Share

## Activity: Challenge Cost Share

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
Challenge Cost Share	\$000	2,413	2,413	+3	+0	+10,000	12,416	+10,003
	FTE	5	5		+0	+0	5	+0

Summary of 2016 Program Changes/Internal Transfers for Challenge Cost Share:		(\$000)	FTE
Climate Resilient Landscapes		+10,000	+0
<b>Total</b>		<b>+10,000</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Challenge Cost Share Program is \$12,416,000 and 5 FTE, a program change of +\$10,000,000 and 0 FTE from the 2015 enacted level.

**Climate Resilient Landscapes (+\$10,000,000/0 FTE)** - The increase of \$10.0 million in Challenge Cost Share funds will be used to expand collaborative partnerships and projects that address the adverse impacts of climate change on public resources. The BLM will prioritize projects using criteria developed in coordination with the U.S. Fish and Wildlife Service and National Park Service to conserve and restore the most vulnerable lands. Projects will invest in heritage resources, fish, wildlife and plants, and recreation lands that can recover quickly from disturbance change. The BLM will use novel, cost-effective methods maximizing the return on investment.

### Program Overview

#### Program Components

The Challenge Cost Share (CCS) Program allows the BLM to partner with local organizations to meet Administration priorities for on-the-ground habitat, recreation and cultural resource work. The BLM leverages CCS funds with partners' monies or other in-kind contributions, at a minimum 1:1 rate. When appropriate, CCS funds are focused in high priority areas and aligned with other BLM funding. Some very successful projects have recently combined upwards of \$6.00 in partner contributions for every \$1.00 of CCS funds.

BLM partners represent a broad spectrum of organizations that work to conserve public lands, enrich the public's outdoor experience, and invite rural and urban residents to explore America's Great Outdoors. These organizations care about the health of local communities, recreation and tourism, cultural heritage, forestry, oil and gas drilling, minerals and mining, livestock grazing, scientific research, wildlife, interpretation and environmental education. BLM partners include:

- Federal, State and municipal agencies;
- Recreation and social groups;
- Non-profit organizations;
- School districts, colleges, and universities;
- Special interest groups;
- National advocacy groups;

- Industry, private corporations and local businesses; and
- The Girl Scouts of the USA and the Boy Scouts of America.

- 

### **Critical Factors**

Partnerships, through programs such as CCS, are vital to the Bureau's success. The BLM's commitment to and involvement with local communities is the key to reach stakeholders and youth. In turn, these successful relationships are an effective way to complete the following strategic work:

- Survey, monitor and inventory resources;
- Restore public land health;
- Support threatened and endangered species management;
- Enhance recreational experiences;
- Manage off-highway-vehicle use;
- Provide visitor services and facilities;
- Conduct public outreach and education projects;
- Support emerging partnership development; and
- Increase the capacity of partners to secure more resources and accomplish more on-the-ground work.

### **Means and Strategies**

Individual CCS projects are prioritized and selected at the local and State level by an interdisciplinary team of BLM State and field office personnel. That prioritized list is then forwarded to the National CCS Team. The National CCS Team evaluates the merit of projects and approves them, in coordination with BLM State office program leads. Project selection criteria include the project's ability to:

- Focus funding in priority areas such as units of the National Conservation Lands and Healthy Landscape focal areas;
- Provide multiple program benefits;
- Restore or sustain BLM land health by accomplishing on-the-ground work that focuses on important habitats;
- Protect cultural and heritage resources and meet public demand for diverse recreational opportunities; and
- Sustain multiple valued and beneficial partnerships.

### **2016 Program Performance**

The BLM has identified national priorities and required State and field offices to submit projects that meet these criteria. The National CCS Team will select the projects using the process described above. Selecting and implementing projects that increase the resilience of BLM lands and resources to climate change will be a major focus of the CCS Program in 2016. The additional \$10.0 requested in CCS, combined with the leveraging effect of working with partners, will supplement ongoing BLM efforts to incorporate resilience into land management programs and activities.

By leveraging funding from a variety of stakeholders, the CCS Program contributes to multiple program subactivities with over 120 program elements. Its accomplishments encompass a wide variety of work activities which assess, treat, and monitor BLM lands.

# Workforce and Organizational Support

## Activity: Workforce and Organizational Support

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
<b>Administrative Support</b>	\$000	47,127	47,127	+540	+0	+3,275	50,942	+3,815
	FTE	287	287		+0	+0	287	+0
<b>Bureauwide Fixed Costs</b>	\$000	92,901	91,010	+2,635	+0	+0	93,645	+2,635
	FTE	0	0		+0	+0	0	+0
<b>IT Management</b>	\$000	25,696	25,696	+262	+0	+0	25,958	+262
	FTE	97	97		+0	+0	97	+0
<b>Total, Workforce &amp; Organizational Support</b>	\$000	165,724	163,833	+12,331	+0	+3,275	170,545	+6,712
	FTE	384	384		+0	+0	384	+0

The 2016 budget request for Workforce and Organizational Support is \$170,545,000 and 384 FTE, a program increase of +\$3,275,000 and 0 FTE over the 2015 enacted level.

### Activity Description

Workforce and Organizational Support funds services related to general-use automated systems and specified business practices not directly tied to a specific program output, such as human resources management, equal employment opportunity, financial management, property and acquisition management, and information technology management.

**Estimated Workforce and Organizational Support Costs** – Section 403 of Division F of the 2015 Consolidated Appropriations Act (P.L. 113-235) requires that the “amount and basis of estimated overhead charges, deductions, reserves or holdbacks, including working capital fund and cost pool charges, from programs, projects, activities, and subactivities to support government-wide, departmental, agency, or bureau administrative functions or headquarters, regional, or central operations” be presented in annual budget justifications and subject to approval by the Committees on Appropriations of the House of Representatives and the Senate.

Administrative Costs (Section 403)†				
\$000	2014 Actual	2015 Enacted	Requeste d Amount	Change from 2015
Bureauwide Fixed Costs	92,901	91,010	93,645	+2,635
IT Management	25,696	25,696	25,958	+262
<b>Subtotal, Direct Appropriations</b>	<b>165,724</b>	<b>163,833</b>	<b>170,545</b>	<b>+6,712</b>
National Assessments	37,168	35,477	34,009	-1,468
State/Regional Assessments	113,415	115,116	116,843	+1,727
<b>Subtotal, Assessments</b>	<b>150,583</b>	<b>150,593</b>	<b>150,852</b>	<b>+259</b>
<b>Total, Administrative Costs (Sec. 404)</b>	<b>316,307</b>	<b>314,426</b>	<b>321,397</b>	<b>+6,971</b>

†Shown as estimated amounts for fiscal years 2014 and 2015

The BLM funds the costs described in Section 403 through a combination of direct appropriations in this activity (Workforce and Organizational Support) and program assessments. For 2016, the BLM estimates these requirements will be approximately \$321.4 million, a \$7.0 million increase from the estimate for 2015, as shown in the table above.

Direct Appropriations – In 2016, the BLM requests \$170.5 in direct appropriations for activities described in Section 403 in three subactivities: Administrative Support, Bureauwide Fixed Costs and Information Technology Management. This provides approximately 53 percent of the funding necessary to maintain these functions.

Program Assessments – In addition to direct appropriations, and in order to provide the level of funding needed to support operations, the BLM assesses its programs at both the national and State-office levels. These assessments provide about 47 percent of the BLM's total Section 403 costs. The estimated program assessments in 2016 are \$150.9 million. These program assessments are conducted with the oversight and administrative management of the BLM Director, Executive Leadership Team, and Information Technology Investment Board.

- *National Assessments* pay for administrative support, Bureauwide program activities, and information technology programs, many of which are mandated and/or fixed costs assessed by the Department through the DOI Working Capital Fund. These initiatives benefit all programs or all employees, and cannot be identified as benefiting any one program. National program assessments are prorated to program areas based upon funding levels and include approximately \$1.0 million for the Bureau's Priority Fund, which is used to assist field offices and programs with high-priority, unplanned or unfunded needs which arise during the fiscal year.
- *State (Regional) Assessments* pay costs at the State level that are not identifiable to a specific program output. In this way, for example, all programs within a State fund support services staff salaries. These costs are prorated to program areas based upon funding levels, historical costs and FTE usage.

**DOI Working Capital Fund** – The Department of the Interior (DOI) manages a Departmental Working Capital Fund (WCF) to provide services to the BLM and other DOI bureaus and offices. The BLM pays for these services with a combination of direct appropriations and program assessments. Program assessments are typically used for services that benefit the entire organization and support the DOI Strategic Plan, BLM focus areas, and DOI requirements. Many of these services are standard and reoccur on an annual basis, but some are fee-for-service based. The DOI and BLM have reimbursable service agreements for these services. The detailed tables that follow show the BLM's portion of Departmental WCF fees for services, both centrally billed and direct billed, for 2014 through 2016.

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
<b>Administrative Support</b>	<i>\$000</i>	47,127	47,127	+540	+0	+3,275	50,942	+3,815
	<i>FTE</i>	287	287		+0	+0	+287	+0

<b>Summary of 2016 Program Changes/Internal Transfers for Administrative Support:</b>	<b>(\$000)</b>	<b>FTE</b>
Health Benefits for Seasonal Employees	+2,275	+0
Enhance Core Capability	+1,000	+0
<b>Total</b>	<b>+3,275</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for Administrative Support is \$50,942,000 and 287 FTE, a program change of +\$3,275,000 and 0 FTE from the 2015 enacted level.

**Health Benefits for Seasonal Employees (+\$2,275,000/0 FTE)** – On July 29, 2014, the Office of Personnel Management issued a proposed rule that would expand eligibility for enrollment under the Federal employee health benefits (FEHB) program to certain temporary, seasonal and intermittent employees. This regulation would make FEHB coverage available to these newly eligible employees no later than January 2015. The Department developed a model to estimate the number of employees who would accept the new coverage and the estimated cost to the government.

**Enhance Core Capabilities (+\$1,000,000/0 FTE)** – The increased funding supports increased costs associated with operating the BLM's management and support infrastructure, continuous improvements to internal controls and compliance to support mission assurance and accountability, and supports human capital planning and workforce planning. The overall increase includes \$67,000 for the Secretary's Indian Water Rights Office (SIWRO). This increase will improve coordination and application of expertise across the Department, Indian tribes, States, and other stakeholders to reach Indian water settlements more effectively and expediently. The budget proposes to expand the duties and responsibilities of the SIWRO to achieve an integrated and systematic approach to Indian water rights negotiations that considers the full range of economic, legal, and technical attributes of proposed settlements. The budget includes funding for additional SIWRO staff to reflect the expanded duties.

#### Legislative Change

**National BLM Foundation** – The BLM proposes to establish a congressionally chartered foundation to help link individual Americans to their public lands. The BLM Foundation would raise private funds to promote the BLM's multiple use and sustained yield mission and foster productive partnerships. A foundation would provide the Bureau with significant new tools to expand its partnerships and allow the public to support critical programs and activities for which they have a passion, whether that is the Wild Horse and Burro Program, the National Conservation Lands, habitat restoration, or others. Established as a charitable, nonprofit

organization, the foundation would benefit the public by protecting and restoring natural, cultural, historic, and recreational resources for future generations. The BLM is unique in that it is the Nation's only large land management agency without a congressionally chartered foundation to support its work. (Please see the Summary of Program and Legislative Changes for the full text of the legislative proposal.)

## Program Overview

The Administrative Support Program funds the following functions:

- Executive and Management Decisions
- Legislative, Public and Regulatory Affairs and Correspondence
- Budget Formulation and Execution
- Financial Management
- Property and Acquisition Management
- Management Systems
- Human Resources
- Program and Management Evaluations
- Service First
- Equal Employment Opportunity
- Privacy
- Safety

## Means and Strategies

The Administrative Support Program funds services related to management and administrative support that cannot be directly tied to a specific program output. The successful management of these services is vital to the effective use of human and capital resources within the BLM. The Administrative Support Program uses a combination of business process engineering and workforce planning strategies as the means to improve and accomplish customer service and effectiveness across the BLM. Each year, the BLM conducts management and program evaluations to identify and acknowledge best practices, procedures and processes. The BLM also measures the satisfaction of external customers, partners, stakeholders, and employees to adhere to the requirements of Executive Order 12862 and the Government Performance and Results Act, and regularly evaluates performance measurements and analysis to ensure these measurements are in alignment with DOI's strategic plan.

## Other Funding Sources

Many of the programs funded by the Administrative Support Program contribute to multiple BLM activities (i.e., Equal Employment Opportunity and Service First) and are also financially supported by many Department and Bureau-wide subactivities that benefit from this work.

## 2016 Program Performance

In 2016, the BLM will emphasize and assure:

- Adequate internal controls on BLM financial systems;
- Compliance with accounting standards;

- Accountability for undelivered order funds;
- Compliance with fiscal laws and regulations;
- Proper accounting, management, and maintenance of capital assets;
- Complete quarterly financial statements, including intra-governmental eliminations;
- Improved electronic data processing; and
- Financial accountability at all levels of the organization.

The Administrative Support Program will focus on the following operations of the Bureau:

Financial Management – The BLM will continue to operate the National Operation Center to offer support services to a variety of critical programs that include fire support, uniforms, property, accounting, contracting, acquisition, space leasing, treasury investments, and the development and operation of financial, procurement, and property systems.

Improved Financial Performance – The BLM will continue to maintain an unqualified (clean) financial audit opinion, and make available to all employees timely and accurate financial information through the Financial and Business Management System (FBMS). The ability to link budget and performance through cost management, as well as access to financial data in real time, has fostered a Bureau-wide ethic of fiscal accountability.

Performance Improvement – The BLM will continue to use the cost management information systems along with other management information tools to evaluate program effectiveness and help allocate budgetary resources across the organization to maximize performance and cost effectiveness.

Disposal of Personal Property – The BLM will continue to dispose of excess personal property to other Federal and State agencies, to donate computers and other electronics to local schools when possible, and to sell working capital fund vehicles and heavy equipment at auction. These activities have reduced overhead costs, increased visibility, improved revenue, and created fast sales and the transfer of monies to the BLM. Proceeds from the sale of vehicles are returned to the working capital fund to augment the cost of replacement vehicles.

Workforce Planning – In 2016, the BLM will continue to refine its workforce planning process to ensure the agency has employees with appropriate skills in the right places at the right times. As a result of workforce planning, the BLM has placed, and will continue to place, more emphasis on entry-level recruiting, career development, and diversification. For example, the Bureau is using the Presidential Management Fellows Program, the Pathways program for students and recent graduates, and other human capital management programs as viable tools for recruiting and filling entry-level positions and for meeting its future skill requirements. In addition, the BLM will continue to place greater emphasis on hiring veterans and veterans with disabilities through the following special hiring authorities and appointments: Veterans Recruitment Appointment, Veterans Employment Opportunity Act of 1998, 30 Percent or More Disabled Veteran, Disabled Veterans Enrolled in a VA Training Program, Schedule A Appointing Authority, and Veterans Preference.

Service First – The BLM will use the permanent Service First authority across the entire Department of the Interior and U.S. Forest Service in 2016. The Bureau will work to improve customer service and seek additional cost savings and productivity improvements. The BLM currently shares 61 sites with other agencies and will continue to expand on these. For more information on Service First, please see the Crosscutting Programs chapter.

This page intentionally left blank.

## Activity: Workforce and Organizational Support

### Subactivity: Bureauwide Fixed Costs

		2014 Actual	2015 Enacted	2016 President's Budget			Change from 2015	
				Fixed Costs	Transfers	Program Changes		Requested Amount
Bureauwide Fixed Costs	\$000	92,901	91,010	+2,635	+0	+0	93,645	+2,635
	FTE	0	0		+0	+0	0	+0

### Justification of 2015 Program Changes

The 2016 budget request for Bureauwide Fixed Costs is \$93,645,000 and 0 FTE.

### Program Overview

Bureauwide Fixed Costs funds the following:

- The Departmental Working Capital Fund (WCF) – These fixed costs are billed by the Department of Interior's (DOI) Office of the Secretary and the DOI's National Business Center, and categorized as two separate bills:
  1. *Central Bill* – Mandatory services provided by the DOI Office of the Secretary and the DOI National Business Center.
  2. *Direct Bill* – Primarily a fee for service bill. These are services provided under reimbursable agreements between the BLM and DOI.
- The Space Management program portion of the Bureauwide Fixed Costs focuses primarily on general purpose and warehouse space acquired through direct lease and General Services Administration (GSA)-provided space in federally owned or leased buildings.
- The Land Mobile Radio (LMR) program provides two-way radio voice services for the BLM. The primary customers are wildland fire, law enforcement, and resources staff. The radio systems are used jointly with other Federal, State, and local agencies in support of wildland fire and law enforcement operations. The LMR program is working to join the radio network nationally among partners, cooperators, and other stakeholders to build a homogenous and holistic architecture.
- The Telecommunications program manages communication services critical to the day to day operations of the BLM. The program manages fixed-line office phones and fax, mobile voice and data devices and service contracts, video conferencing, and internal and external data networks service contracts, including network security. The program's management of the radio network supports public safety, connecting firefighters and law enforcement through agency and inter-agency managed microwave radio links, base stations, and radios, including contracts for satellite radios service. Communications (fax, print, voice, and data) during Continuity of Operations relies and these established efforts of the Telecommunications program. Costs for these services are funded from individual State/National Centers and the DOI Working Capital Fund.
- The Federal Personnel Payroll System (FPPS) monitors the costs of using and maintaining BLM's personnel management systems.

- The Mail and Postal Costs component of this program assesses and monitors BLM's mail and postal service utilization, which includes base metered postage machines, next day postage, and other express mail services.
- The Unemployment Insurance Costs are based upon historical data, paid through the Department's Federal Employees Compensation Account of the Unemployment Trust Fund to the Department of Labor, pursuant to the *Omnibus Budget Reconciliation Act of 1980*.
- The Workers Compensation amount requested for 2016 covers costs for a 12-month period and is paid to the Department of Labor through the Department's Employee Compensation Fund, pursuant to 5 U.S.C. 8147(b) as amended by Public Law 94-273.

### Critical Factors

The critical factors in the Bureauwide Fixed Costs program:

- The Space Management program promotes and encourages sustainability. All new BLM facilities comply with BLM Sustainable Building Implementation Plans, while addressing current and emerging needs.
- Presidential Memorandum – Disposing of Unneeded Federal Real Estate dated June 10, 2010, emphasized the need to:
  - Improve utilization of facilities through innovative space management, such as alternative work arrangements and telework agreements.
  - Eliminate lease arrangements that are not cost effective.
  - Pursue consolidation opportunities with other agencies in common asset types, such as data centers, office space, and warehouses.
- Department of the Interior Memorandum – Space and Facilities Management dated August 2, 2011, emphasized that real property (owned and leased) is a key aspect of the overall cost cutting campaign. The utilization standard for general purpose office space has now been set to 180 square feet per person. Opportunities for teleworking in order to reduce overall real property costs are encouraged.

### 2016 Program Performance

In 2016, the BLM will continue to manage the LMR Program, telecommunications, the FPPS, unemployment costs, mail and postal costs, the Employee Compensation Fund, and office space leasing, which is the largest of BLM's fixed costs.

The BLM established the following long term goals for Space Management:

- Reduce space usage whenever a reduction can be accomplished economically;
- Evaluate offices for consolidation;
- Maximize the use of existing, owned buildings and warehouses whenever possible;
- Extend existing leases, when appropriate, to allow time to prioritize long-term leasing actions;
- Whenever beneficial, reduce the size and change the layout of leased warehouses;
- Implement the use of high-density, storage systems for office and warehouse areas; and
- Promote telework wherever a corresponding reduction in leased office space would occur.

## Activity: Workforce and Organizational Support

### Subactivity: Information Technology Management

		2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
				Fixed Costs	Transfers	Program Changes	Requested Amount	
IT Management	\$000	25,696	25,696	+262	+0	+0	25,958	+262
	FTE	97	97		+0	+0	97	+0

### Justification of 2016 Program Changes

The 2016 budget request for the Information Technology Management Program is \$25,958,000 and 97 FTE.

### Program Overview

The Information Technology Management Program is responsible for managing all aspects of information technology (IT) throughout the BLM. These responsibilities include:

- *Bureauwide Policy* – Planning, directing, coordinating, and evaluating IT programs, policies and procedures and providing guidance for the effective use of IT resources in support of BLM programs and services in accordance with the Clinger-Cohen Act of 1996 and the Government Performance and Results Act of 1993;
- *Capital Planning and Investment Control (CPIC)* – The Clinger-Cohen Act of 1996 and the E-Government Act of 2002 sought to improve mission performance by requiring agencies to use a disciplined CPIC process to acquire, use, maintain and dispose of the BLM's IT portfolio. CPIC is a dynamic process in which IT investments are selected and then continually monitored and evaluated to ensure each chosen investment is well managed, cost effective, and supports the mission and strategic goals of the BLM. CPIC ensures that all IT investments align with BLM's mission and support business needs while minimizing risks and maximizing returns throughout the investment's life cycle.
- *Information Resources Management* – Providing management and oversight over implementation of the Freedom of Information Act, Open Government Initiative, Section 508 of the American Disabilities Act, IT Configuration Management, Indian Trust and the Records Act; ensuring that manual and electronic records are accessible, properly maintained, documented, scheduled and disposed of; and, ensuring that automated systems are documented and scheduled and that records preservation orders are tracked and monitored to so that records are properly secured, accessible and retrievable to respond to court orders and requesters;
- *IT Transformation Implementation* – The BLM continues to pursue streamlining efforts to improve IT service delivery and reduce the overall costs for IT support across the BLM. In 2016, the BLM will have its IT support and services delivered in a consistent manner with a focus on customer needs.
- *Data Management and Administration* – Ensuring that the information the BLM uses in decision making is accurate, timely, useful, and free of bias;
- *National Applications* – Managing national applications and systems throughout their life cycles of investment and ensuring successful service delivery through all phases—

concept, design, construction, data management, operation, support and maintenance—in order to meet business needs while ensuring system data integrity;

- *Infrastructure* – Providing compliant and effective technology platforms and environments; and
- *Security* – Developing security-related policies, procedures, and guidance; providing technical assistance for securing major applications and general support systems; overseeing security compliance efforts; maintaining an inventory of systems and their security Assessment and Authorization status; coordinating IT Security Education and Awareness efforts; and developing IT security performance measures and reports.

### Other Funding Sources

Every BLM program contributes some funding for IT activities. Major investments in the BLM IT portfolio are funded by the programs supported by those investments. IT infrastructure investments are funded proportionately by all programs.

### 2016 Program Performance

There are no specific performance goals for this subactivity; however, the BLM has achieved success in lowering the overall costs of IT by implementing dynamic approaches to respond to national priorities. Because the scope of the information needed to support the BLM's mission is vast, the IT systems required to manage this information have grown increasingly complex. Information systems are used throughout the BLM to collect data on land health, water quality, restored ecosystems, hazardous fuels reduction, land contamination, habitat protection, cultural and natural heritage resources, oil and gas leases and permits, lease applications, minerals and grazing permits, timber sales, recreation, and financial transactions. Managing our data as a corporate asset will ensure the BLM has greater consistency and integration while reducing redundancies.

Additionally, BLM's IT Transformation initiative will continue to achieve savings through labor reductions, consolidation of infrastructure staff, servers and data centers closures, contract consolidations and the promotion of mobility which will allow us to reduce our overall footprint. IT contracts will be reevaluated through the IT Spend Plan process, resulting in maximization of bulk purchases to achieve additional savings and standardization. The BLM will continue its commitment to ensuring that information technology efforts align with Departmental initiatives focused on consolidation, shared services, and improving IT cost efficiency. The Bureau will continue to seek further centralization efforts internally, while expanding consolidation efforts by working with other Bureaus to share services in areas the of Data Center Consolidation, Geospatial, IT Acquisitions, and Application Consolidation to achieve greater cost efficiency.

# Mining Law Administration

## Activity: Mining Law Administration

	2014 Actual	2015 Enacted	2016 President's Budget				Change from 2015
			Fixed Costs	Transfers	Program Changes	Requested Amount	
Mining Law Administration	39,696	39,696	+0	+0	+0	39,696	+0
<i>Offset</i>	-39,696	-39,696	+0	+0	+0	(39,696)	+0
<i>FTE</i>	319	319		+0	+0	319	+0

### Justification of 2016 Program Changes

The 2016 budget request for Mining Law Administration is \$39,696,000 and 319 FTE. The budget assumes the program's operating cost will be fully offset by revenue from mining claim maintenance and location fees.

### Legislative Changes

The budget includes a legislative proposal to reform hardrock mining and provide a better return to the taxpayer from hardrock production on Federal lands.

This proposal institutes a leasing process under the Mineral Leasing Act of 1920 (MLA) for certain minerals (gold, silver, lead, zinc, copper, uranium, and molybdenum) currently covered by the General Mining Law of 1872. After enactment, mining for these metals on Federal lands will be governed by the new leasing process and subject to annual rental payments and a royalty of not less than five percent of gross proceeds. Half of the receipts will be distributed to the State where the lease is located and half would be deposited to the Treasury's General Fund. Pre-existing mining claims would be exempt from the change to a leasing system, but would be subject to increases in the annual maintenance fees under the General Mining Law of 1872. The Department of the Interior Office of Natural Resources Revenue will collect, account for, and disburse the receipts.

The proposal also increases annual maintenance fees and eliminates the fee exemption for miners holding 10 or fewer mining claims. These changes discourage speculators from holding claims that they do not intend to develop. Holders of pre-existing mining claims for these minerals could voluntarily convert their claims to leases. The legislation would provide a mechanism for royalty relief under certain situations, in the manner currently set out in the MLA.

### Program Overview

#### Program Components

The BLM Mining Law Administration Program is responsible for providing access to locatable mineral resources in an environmentally responsible manner. Locatable minerals are those governed by the General Mining Law of 1872, and include gold, silver, lead, zinc, copper, uranium, and molybdenum. To provide access to these mineral resources, the BLM administers mining claims, manages on the ground activities, and collects location and annual maintenance fees. The BLM also processes notices for exploration and plans of operations for exploration and production of these minerals. Reclamation plans are evaluated and financial guarantees are required to ensure adequate reclamation that meets the requirements of Federal law. The

BLM inspects operations governed by notices and plans of operation to ensure compliance with all applicable laws and regulations. The BLM takes enforcement actions when the terms and conditions of an operation have been violated. Finally, the BLM is responsible for conducting mineral examinations to determine valid existing rights under the mining laws.

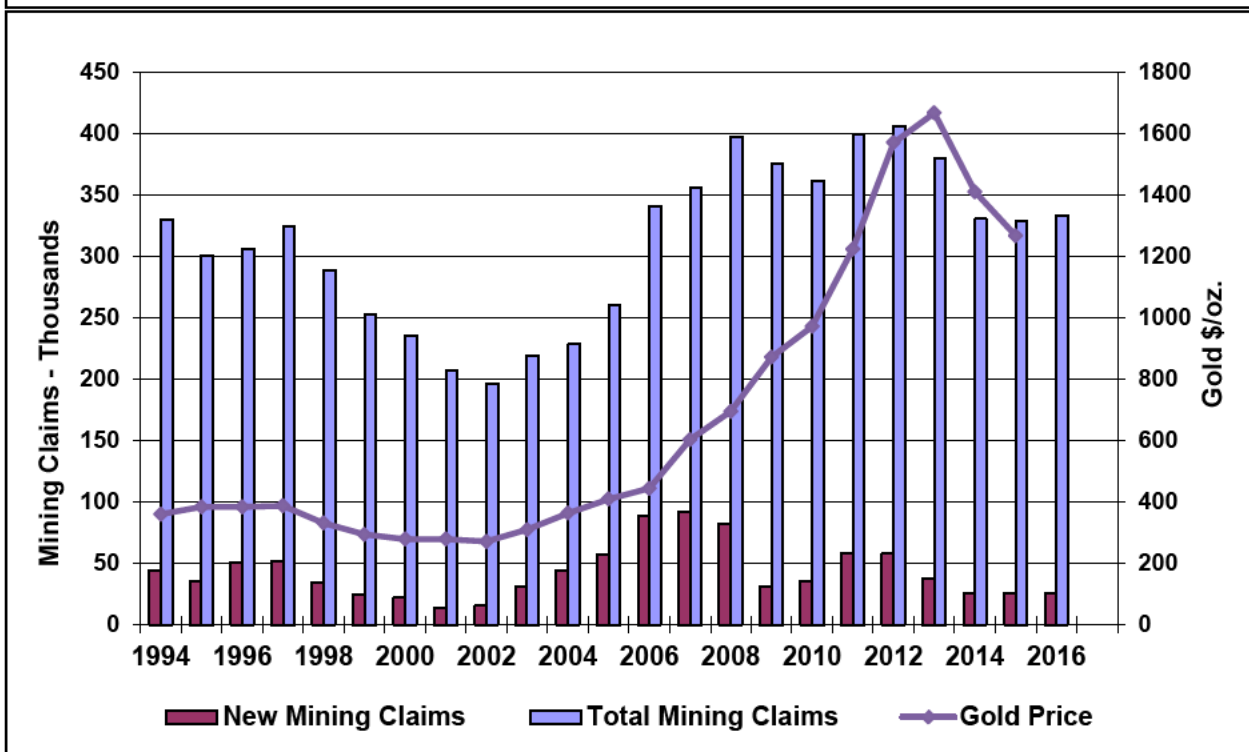

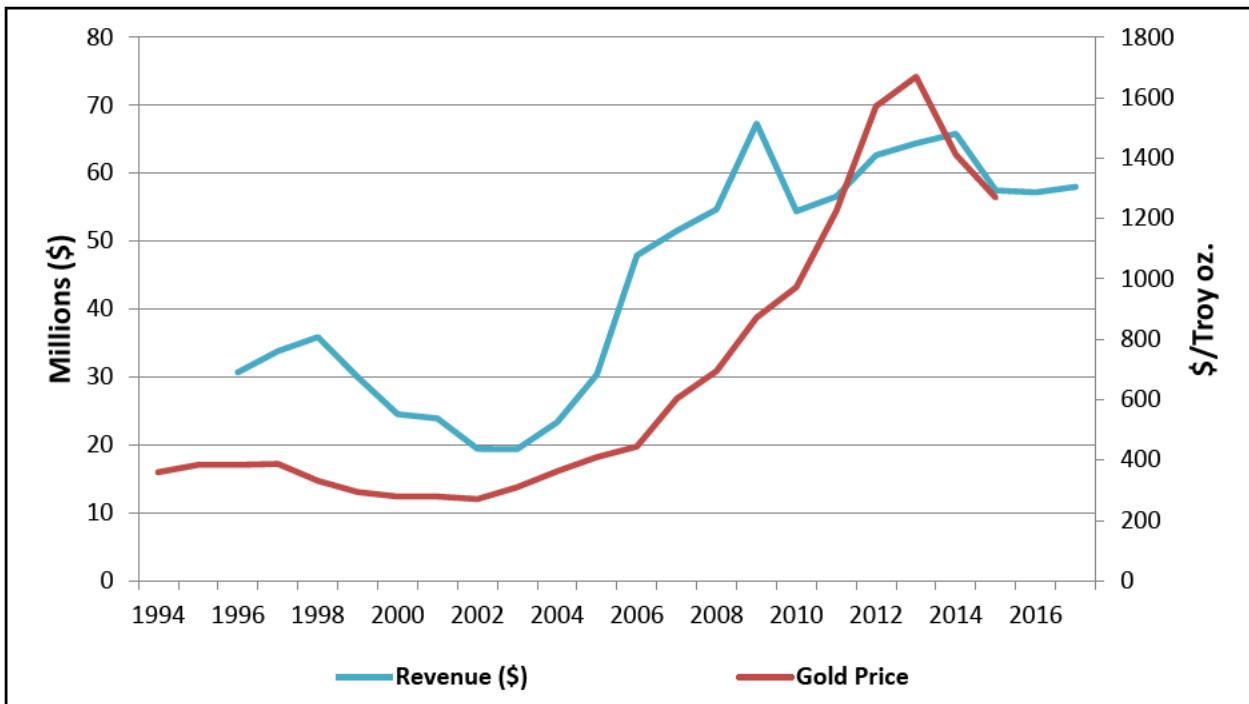

### **The General Mining Law of 1872**

The BLM, through the Mining Law Administration program, is responsible for managing exploration and development of locatable minerals available on public lands under the General Mining Law of 1872, and the Federal Land Policy and Management Act of 1976. Since 1993, claimants have been required to pay an annual maintenance fee for each mining claim and site in lieu of performing assessment work as previously required under the General Mining Law of 1872. The BLM is required by statute to adjust these fees every five years, or more frequently if determined reasonable, to reflect changes in the Consumer Price Index published by the Bureau of Labor Statistics. For the 2015 assessment year, maintenance and location fees were increased. Maintenance fees were increased from \$140 to \$155, and location fees, required for all new claims in addition to the maintenance fee, were increased from \$34 to \$37 per claim. These fees were last adjusted in 2009.

In 2014, the BLM implemented the Mining Claim Maintenance Fee Payment Portal so that mining claimants could begin paying their annual maintenance fee payment online starting with the 2015 assessment year. Based on the initial filings, the portal has proven to provide claimants an efficient and secure means of paying their maintenance fee online. The BLM has also realized benefits by having the data on the claim interface with and update the lands record system (LR2000), which eliminates the need to manually process the payments and manually update the LR2000 system. The BLM is considering ways to expand use of the payment portal and realize increased efficiencies in other programs.

### **Critical Factors**

Filing of new mining claims in the Mining Law Administration Program is commodity price-dependent. Prices for all of the major commodities have been declining since their peak in 2011. For example, gold reached a high of \$1,875 per ounce, in September, 2011 and averaged \$1,167 per ounce for November, 2013, a decline of 38 percent. This is true during the same time period for other major commodities for which mining claims are located, including silver (-67 percent), platinum (-36 percent), and copper (-33 percent). This commodity slump has impacted mining claim location activity on public lands. The number of mining claims recorded for the 2014 assessment year has declined 13 percent since 2013 and 19 percent from 2012. Correspondingly, the revenue from mining claim maintenance and location fees has declined 13 percent from 2013. As gold is the top commodity explored for and produced on public lands, mining claim trends regarding quantity and revenue roughly correlate to gold commodity prices as demonstrated by the two charts below.

\*The above chart is based upon the most recent data. The new and total mining claims illustrate the numbers as reported in the Public Land Statistics (PLS) for the indicated fiscal years. The 2014 claim data was derived from preliminary PLS data and is subject to change. Data for 2015 and 2016 are projections.

The mining industry's domestic activity levels are dependent upon commodity prices. Companies engaged in exploration are known in the industry as junior mining companies and

require millions in venture capital. These companies do not own mines, have no regular revenue streams, and rely significantly on investor financing. These companies invest millions locating mining claims and exploring public lands. When commodity prices are in decline, investment dollars are hard to find, and junior mining companies begin to cut costs usually leading to a reduction in mining claims. This sector of the industry is the most sensitive to commodity pricing and is likely responsible for the decline in the number of active mining claims seen in 2013 and 2014. If the industry activity decreases or remains flat, further decline in mining claim numbers and associated revenue should be expected.

Mining claims found to have no mineral values or interest on the part of the mining claimants typically lapse due to nonpayment of maintenance fees by the claimant or are sold. Lapse claims hold no rights and may be relocated by another claimant. Mining claims found to be of interest will continue to see on the ground activity by the claimants and or operators as they seek to confirm the presence of a mineral deposit. During a market downturn, mining claimants will likely evaluate and release any unfavorable holdings. Also the number of new mining claim locations may decrease due to the lack of exploration investment. The degree to which mining claim revenue will be impacted will depend on the length and the severity of the declining markets. Mining claim location and maintenance trends will likely continue to follow market trends.

Mining claim location for technology metals remains stable despite declines in other commodities. Although no current “rush” exists, the BLM is experiencing continued interest from the mining industry to locate and discover domestic supplies of these minerals. Technology minerals form the building blocks of technology-dependent industries, such as electronics, automotive and energy. These minerals include but are not limited to, rare earths, lithium, indium, germanium, vanadium, graphite and cobalt.

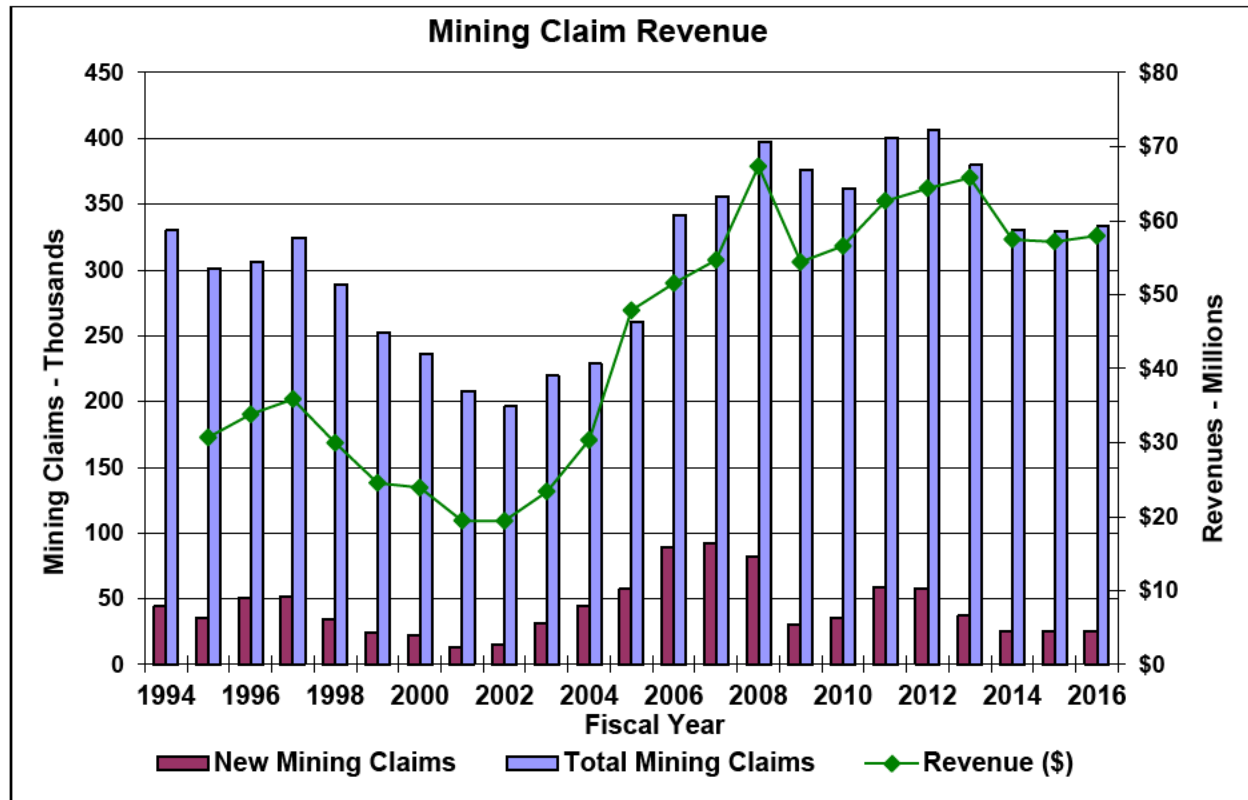

While new mining claims have decreased, the BLM continues to experience a workload for processing plans of operations for new, large scale mines. The inspection workload for existing operations also continues and the funding provided through this program is important to allow the BLM to maintain capability and capacity to ensure activities are done in an environmentally sound and sustainable manner.

### **Other Funding Sources**

The Mining Law Administration program is primarily funded through this subactivity, in which the appropriation is offset by maintenance and location fees. Since 1994, Congress, through its appropriations acts, has tied Mining Law Administration funding to revenue collected by the program. The funds made available by Congress are reduced by amounts collected by the Bureau and credited to this appropriation.

In addition, under the authorities of 43 U.S.C. 1474 and 1734(a), the BLM retains the collected processing fees from mining claim recordation actions and mineral patent adjudication to recover the full cost of processing these documents. A revised fee schedule was promulgated in November 2005. The Mining Claims Revenue chart shows the recent history of mining claims and mining claim revenue. The processing fees for recording a new mining claim, annual filings, transfers of interest, amendments to previously recorded documents, deferments of assessment, and protests increased in June of 2009 and again at the end of 2014. In addition, the BLM charges a processing fee, on a case by case basis, for proposed mining plans of operations requiring an environmental impact statement. A processing fee is also applicable to validity examinations or common variety examinations and associated reports performed in

connection with a patent application, 43 CFR 3809.100 (withdrawn lands) or 43 CFR 3809.101 (common variety determinations) on a case-by case basis.

\*The above chart is based upon the most recent data. The new and total mining claims illustrate the numbers as reported in the Public Land Statistics (PLS) for the indicated fiscal years. The 2014 claim data was derived from preliminary PLS data and is subject to change. The revenue estimates for 2014 and earlier are based upon the amounts credited to the MLR appropriation and the amounts deposited in the hardrock mining claim maintenance fee Treasury account. Data for 2015 and 2016 are projections.

### 2016 Program Performance

In 2016, the BLM will:

- Provide access to locatable mineral resources while ensuring that mining operations follow BLM’s regulations and cause no unnecessary and undue degradation;
- Conduct inspection and enforcement to ensure compliance with all applicable Federal regulations for all mining and exploration activities authorized by the mining laws on public lands;
- Record and adjudicate existing mining claims and new mining claim locations; and
- Continue working with State agencies to streamline multiple agency processes and minimize the time necessary to authorize exploration and development activities.

The BLM expects the inspection workload to remain steady in 2016. Output for 2015 and 2016 is expected to rebound to pre-furlough levels. The focus of the inspection program is on exploration and mining sites with on-going operations; sites where reclamation earthwork has been completed and the BLM and the operator are waiting for re-vegetation success are a lower priority for inspection.

The average processing time of Plans of Operations decreased from 26 months in 2013 to 17 months in 2014. The rolling 3-year average for average processing time is 19 months. The BLM will continue to work with industry and internally explore opportunities to find efficiencies to reduce the average processing times of Plans of Operations.

# Land Acquisition

# Land Acquisition

## Appropriations Language

For expenses necessary to carry out sections 205, 206, and 318(d) of Public Law 94–579, including administrative expenses and acquisition of lands or waters, or interests therein, [\$19,746,000]\$38,000,000, to be derived from the Land and Water Conservation Fund and to remain available until expended. (*Department of the Interior, Environment, and Related Agencies Appropriations Act, 2015.*)

Note: The 2016 request amount of \$38,000,000 is updated from the amount included in the Appendix, Budget of the United States Government, Fiscal Year 2016.

## Appropriations Language Citations

### **1. For expenses necessary to carry out sections 205, 206 and 318(d) of Public Law 94-579, including administrative expenses**

Section 205 authorizes the Secretary to acquire by purchase, exchange, donation, or eminent domain, public lands or interests. Eminent domain may only be invoked to secure access to public lands if the lands are confined to a narrow corridor and serve a purpose. This section does not expand or limit the Secretary's authority to acquire land by eminent domain within the boundaries of the National Forest System. Acquisitions must support the mission of the Department and have associated land-use plans.

Section 206 provides authority for the Secretary to dispose of a public tract of land by exchange if it serves the public interest well. The Secretary may accept title to any non-Federal land or interests in exchange for such land which he or she finds proper for transfer out of Federal ownership and which are located in the same State as the non-Federal land or interest to be acquired. For the purposes of this subsection, unsurveyed school sections which, upon survey by the Secretary, would become State lands, shall be considered as "non-Federal" lands. The values of the lands exchanged by the Secretary need to be equal, or if they are not equal, the values will be equalized by the payment of money to the grantor or to the Secretary concerned as the circumstances require.

Section 318 authorizes the Secretary to use the Land and Water Conservation Fund to acquire public lands as described in section 205.

### **2. including administrative expenses and acquisition of lands or waters, or interests therein, \$38,000,000,**

This language provides the Secretary with authority to use \$38,000,000 in appropriated funds to acquire lands or waters or pay administrative expenses to carry out the mission of the program.

### **3. to be derived from the Land and Water Conservation Fund**

The language specifies that funding appropriated for land acquisition activities would be derived from the Land and Water Conservation Fund (LWCF), which was enacted by Congress in 1965.

The Act designated that a portion of receipts from offshore oil and gas leases be placed into a fund annually for State and local conservation, as well as for the protection of our national treasures (parks, forest, and wildlife areas).

#### **4. and to remain available until expended.**

The language makes the appropriations to the account available on a no-year basis. This type of account allows the BLM a valuable degree of flexibility needed to support multi-year land acquisitions, agreements and purchases.

### **Appropriation Language Citations and Authorizations**

<b><i>Federal Land Policy and Management Act of 1976 (FLPMA) (Pub. L. 94-579, Sec. 101 et seq.; 43 U.S.C. 1701 et seq.)</i></b>	Provides authority for acquisition (Pub. L. 94-579, Sec. 205, 206; 43 U.S.C., 1715, 1716) of lands or interests in lands by purchase, exchange, donation, or eminent domain, when it is consistent with the mission of the Department and with land use plans (Pub. L. 94-579, Sec. 205(b); 43 U.S.C., 1715(b)); in exercising this authority, appropriations from the Land and Water Conservation Fund may be used to purchase lands which are primarily of value for outdoor recreation purposes (Pub. L. 94-579, Sec. 318(d); 43 U.S.C., 1748(d)).
<b><i>Federal Land Transaction Facilitation Act of 2000 (FLTFA) (Public Law 106-248)</i></b>	Provided authority for the use of receipts from disposal actions by the BLM to purchase inholdings and lands adjacent to federally designated areas containing exceptional resources, as defined in FLTFA, from willing sellers with acceptable titles, at fair market value, to “promote consolidation of the ownership of public and private lands in a manner that would allow for better overall resource management administrative efficiency, or resource allocation.” The 2010 Supplemental Appropriations Act (P.L. 111-212) reauthorized FLTFA for one year, expiring in July 2011.
<b><i>Land and Water Conservation Fund Act of 1965, as amended (16 U.S.C. 460I-4 et seq.)</i></b>	Authorizes planning, acquisition, and development of needed land and water areas and facilities; in exercising this authority, appropriated funds from the LWCF may be used for such acquisition to assist in preserving, developing, and assuring accessibility for the benefit of present and future citizens.
<b><i>Wild and Scenic Rivers Act of 1968, as amended (16 U.S.C. 1271 et seq.)</i></b>	Authorizes the Secretary to exchange or dispose of suitable Federally-owned property for non-Federal property within the authorized boundaries of any federally-administered component of the National Wild and Scenic Rivers System, 1277(d). Similar exchange authority is contained in The National Trails System Act of 1968, as amended 16 U.S.C. 1241et seq.).
<b><i>Wilderness Act of 1964 (16 U.S.C. 1131 et seq.)</i></b>	Authorizes the Secretary to acquire privately owned property within the boundary of any area designated as a component of the National Wilderness Preservation System.

***National Trails System Act of 1968, as amended (16 U.S.C. 1241-1249)*** Authorizes the Secretary to acquire lands or interests in lands included in the right-of-way selected for a National Historic, National Recreation, or National Scenic Trail; by written cooperative agreement, donation, purchase (with donated or appropriated funds), or exchange.

***Other*** Other acts such as, the King Range National Conservation Area Act of 1970, as amended (16 U.S.C. 460y); San Pedro Riparian National Conservation Area Act, in Arizona (16 U.S.C. 460xx); Arkansas-Idaho Land Exchange Act of 1992 (P.L. 102-584); Utah School Lands Act (P.L. 103-93); Steens Mountain Cooperative Management and Protection Act of 2000 (16 U.S.C. 460nnn, P.L. 106-399; and California Desert Protection Act of 1994 (P.L. 103-433), authorize the Secretary to enter into acquisitions, including purchase, donation, land exchange.

Permanent Land Acquisition	\$000	0	0	55,397	+55,397

**Notes:**

In addition, the Administration will submit a legislative proposal to permanently authorize annual funding without further appropriation from the Land and Water Conservation Fund

The 2016 budget proposes to fund the Land Acquisition program with an appropriation from the Land and Water Conservation Fund at a total level of \$38,000,000 and 10 FTE, a program change of +\$18,158,000 and 0 FTE from the 2015 enacted level.

### Activity Description

The BLM is authorized to acquire intermingled and adjacent non-Federal lands through purchase, exchange, and donation for specified public benefits. Consolidation of the public lands through land acquisition increases management efficiency in pursuing land management goals such as maintaining open space, providing opportunities for environmentally responsible recreation, preserving natural and cultural heritage resources, restoring at-risk botanical, fisheries and wildlife resources, and maintaining functioning ecosystems. The BLM's Land Acquisition program utilizes Land and Water Conservation Fund (LWCF) monies for Land Acquisition, Emergencies, Hardships, and Inholdings, and Acquisition Management.

In addition to acquiring land by purchase with LWCF appropriated funds, the BLM acquires land by exchange. When an exchange is proposed, every attempt is made to equalize values between the lands coming into Federal ownership and the lands leaving Federal ownership. In those instances where land values are not equal, the BLM attempts to equalize land values by decreasing or increasing the land leaving Federal ownership. In certain instances where values are not equal and there is no available land in Federal ownership to equalize values, a cash payment can be made to the exchange proponent. This cash payment, an equalization payment, cannot exceed 25 percent of the difference between the values of the lands coming into Federal ownership and the lands leaving Federal ownership.

<b>Major Components of BLM's Land Acquisition Program</b>				
(\$000)	2014 Actual	2015 Enacted	2016

	FTE	0	0		+0	+0	0	+0

Summary of 2016 Program Changes/Internal Transfers for Land Acquisitions:	(\$000)	FTE
High-Priority Projects	+18,158	+0
<b>Total</b>	<b>+18,158</b>	<b>+0</b>

### Justification of 2016 Program Changes

The 2016 budget request for the Land Acquisitions program is \$34,384,000, a program change of +\$18,158,000 and 0 FTE from the 2015 enacted level.

**High Priority Projects (+\$18,158,000 / 0 FTE)** - In 2016, the BLM will acquire high priority acquisition projects in the core and collaborative landscape planning land acquisition programs. The 2016 core program is \$10.4 million and will fund nine of BLM's highest priorities. The collaborative landscape-planning component builds on efforts begun in 2011 to invest strategically in interagency landscape-scale conservation projects while continuing to meet bureau-specific programmatic needs. The Department of the Interior and the U.S. Forest Service (USFS) collaborated extensively to develop a process to more effectively coordinate land acquisitions with government and local community partners to achieve the highest priority shared conservation goals. The 2016 request includes a total of \$19.9 million for four collaborative landscapes consisting of nine projects. Within this total, the BLM includes \$9.2 million for the Upper Rio Grande landscape, \$5.8 million for the High Divide landscape, \$2.6 million for the Rivers of the Chesapeake landscape and \$2.3 million for projects that are part of the National Trails System landscape. The 2016 request also includes a total of \$4.0 million to benefit Sportsmen/Recreational access, a program change of +\$2.0 million from the FY2015 enacted level.

### Legislative Change

**Permanent Appropriation: Permanent Land Acquisition** – The Department of the Interior will submit a legislative proposal to permanently authorize annual funding, without further appropriation or fiscal year limitation for the Land and Water Conservation Fund (LWCF). Starting in 2017, \$900 million annually in permanent funds would be available. During the transition to full permanent funding in 2017, the budget proposes \$900 million in total LWCF funding in FY 2016, comprised of \$500 million in permanent and \$400 million discretionary funds. The amounts requested include the authorized levels for the Department of the Interior and the Department of Agriculture.

In 2016, the budget requests \$38.0 million in discretionary funds for Federal land. The mandatory proposal includes \$55.4 million for Federal land acquisition. Land acquisition funds are also used to secure access for the American public to their Federal lands. Concurrent with the America's

Great Outdoor initiative, these funds will invest in acquisitions to better meet recreation access needs by working with willing landowners to secure rights-of-way, easements or fee simple lands that provide access or consolidate Federal ownership so the public has unbroken spaces to recreate, hunt, and fish. BLM will focus \$4.0 million in discretionary funding and \$6.0 million in mandatory funding towards projects to acquire access for sportsmen/recreation access.

### Program Overview

The Land Acquisitions Program promotes the conservation of natural landscapes and resources by consolidating public lands through purchase, exchange and donation to increase management efficiency and preserve areas of natural, cultural, and recreational importance. Acquisition projects occur within or adjacent to nationally-designated management units, including National Monuments, National Conservation Areas, Wilderness, National Wild and Scenic Rivers, National Scenic Trails, and National Historic Trails, as well as in BLM-designated Areas of Critical Environmental Concern and Special Recreation Management Areas. Land acquisition funding is also necessary to acquire small parcels of land or access easements through these lands to provide public access to landlocked BLM lands. The BLM estimates 23 million acres (or nine percent) of BLM-managed public lands lack public access or have inadequate public access, primarily due to checkerboard land ownership patterns. Securing and improving public access to these lands will serve various recreational activities, including hunting and fishing.

The BLM utilizes funding from other sources such as from the *Southern Nevada Public Land Management Act* and other land sale authorizations. The Budget includes a legislative proposal to reauthorize the Federal Land Transaction Facilitation Act (FLTFA) and allow lands identified as suitable for disposal in recent land use plans to be sold using FLTFA authority. FLTFA sales revenues would continue to be used to fund the acquisition of environmentally sensitive lands and the administrative costs associated with conducting sales, which would provide funding for land acquisition as well. These legal authorities are described in the Lands and Realty Management section of the Management of Lands and Resources chapter, and various land sale accounts are described in the Permanent Operation Funds chapter.

The national Collaborative Landscape Planning (CLP) priority projects contained in this document reflect the collaborative efforts between the Departments of Interior and Agriculture in specific focal areas. As part of the landscape program, Interior bureaus collaborated extensively with the USFS and with government and local community partners to plan projects to achieve the highest priority shared landscape-scale conservation goals. An interagency team of BLM, U.S. Fish and Wildlife Service, National Park Service, and USFS experts identified a number of ecosystems throughout the Nation where high priority shared conservation goals could be achieved based on existing locally-driven conservation efforts. The prospective projects were evaluated according to criteria that included:

- Process: ensure proposals are community-driven, collaborative, and cost-effective;
- Outcome: ensure proposals contribute to informed, science-based, important local landscape-scale outcomes, so that Federal resources strategically achieve land management objectives;
- Urgency: ensure funding decisions acknowledge where funds must be spent sooner rather than later to achieve outcomes or prevent harm, versus areas where outcomes could be achieved even if funding were postponed; and,

- Contribution to National/Regional priorities: ensure outcome goals contribute to regional and national priorities.

After analyzing the results of this process, bureau directors advised the Secretary on the development of the final CLP acquisitions to be incorporated in the integrated land acquisition lists.

**Mandatory Appropriation: Permanent Land Acquisition** - The Department of the Interior's FY 2016 budget request proposes a multi-year strategy leading to full and mandatory funding for the LWCF. Mandatory funding would help to fulfill the commitment of LWCF: a fair return of the profits from developing the Nation's offshore oil and gas resources to improve and increase the availability of outdoor opportunities for all Americans. The FY 2016 mandatory request through LWCF would provide an additional \$55.4 million for BLM land acquisition activities, for a total of \$93.4 million between discretionary funding and the mandatory proposal. The complete listing of proposed projects would cover the top 25 BLM priorities, located in 12 States.

The joint Interior-Agriculture National Selection Committee identified a number of ecosystems throughout the Nation where high priority shared conservation goals can be achieved based on existing locally-driven conservation efforts. Through the rigorous merit based evaluation process, eight ecosystems were selected for inclusion in the 2016 budget. The BLM is involved in seven of those landscapes including the Upper Rio Grande, High Divide, Rivers of the Chesapeake, National Trails System, Florida-Georgia Long Leaf Pine, Pathways to the Pacific, and Northern California Coastal.

Investing now in these ecologically important but threatened landscapes will ensure that they remain resilient in the face of development pressures and global climate change. Smart investment in strategic conservation in these landscapes will prevent further ecosystem decline or collapse, which is expected to preclude the need for future investments in restoration.

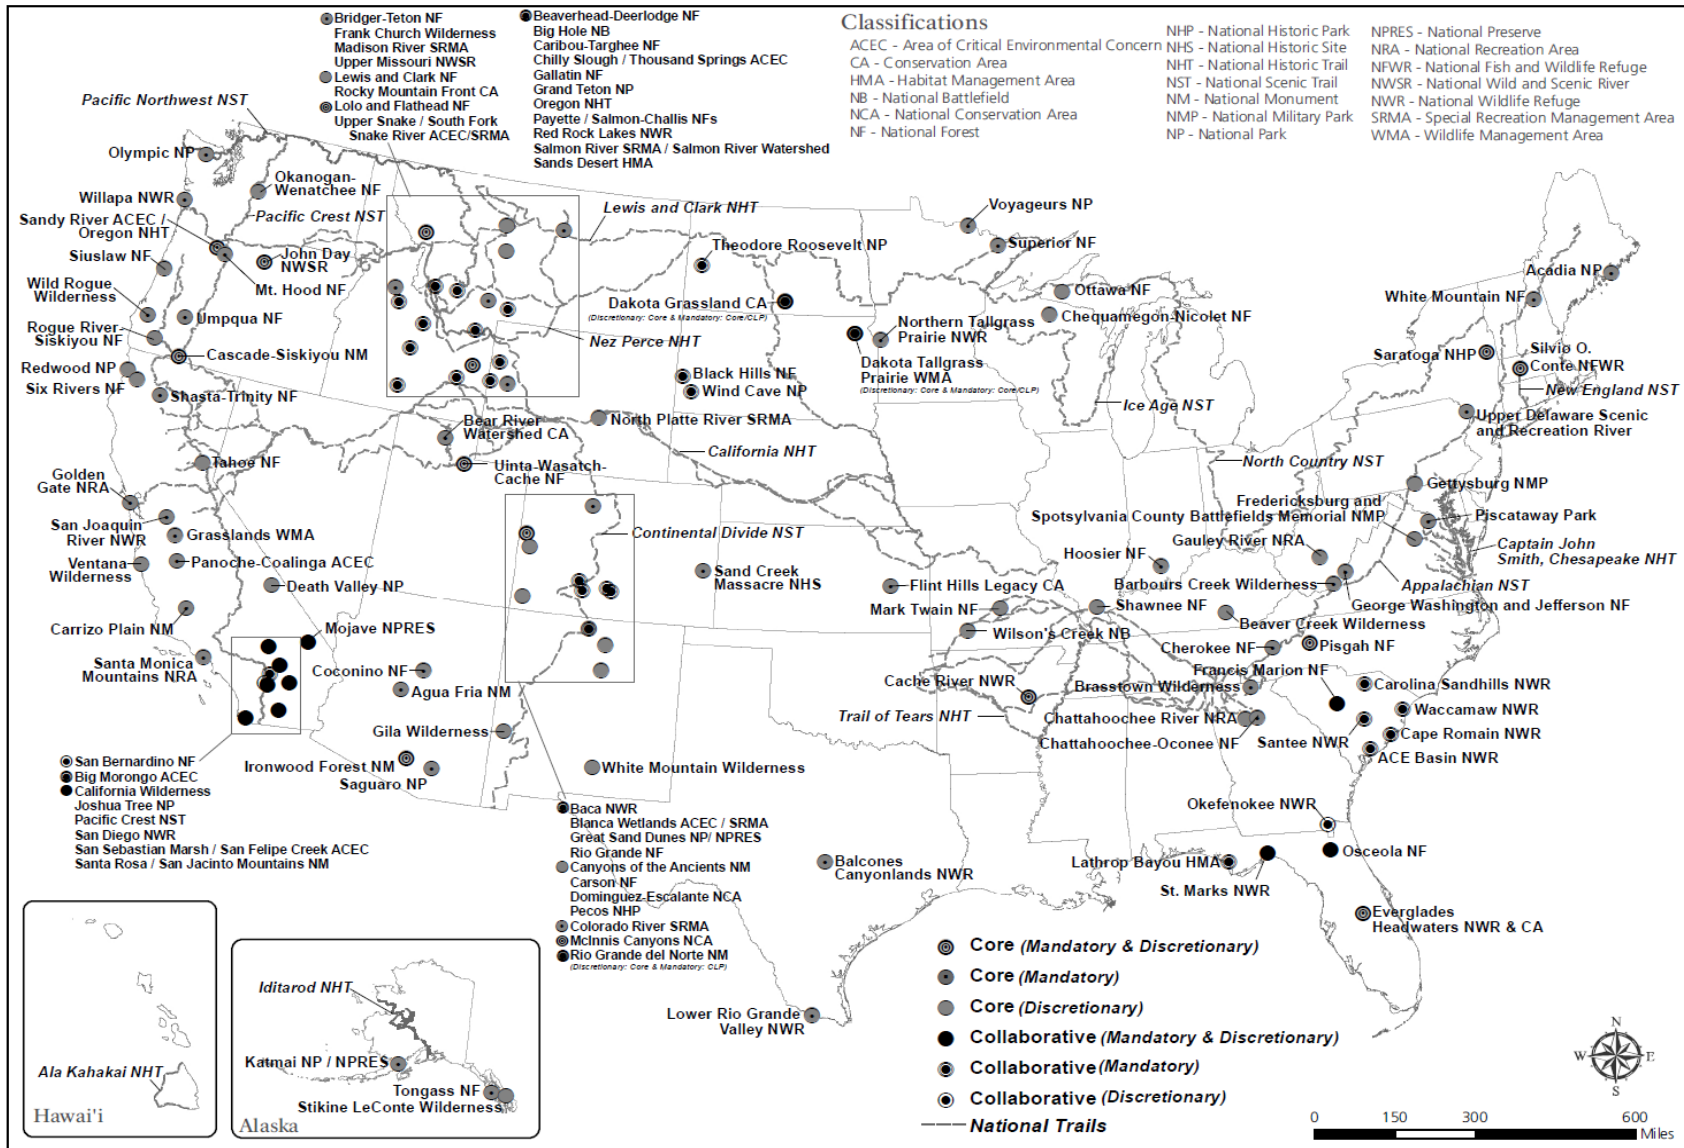

### **2016 Program Performance**

In 2016, the BLM has plans for 18 acquisition projects (nine core and nine collaborative) in ten States using discretionary funding. With mandatory funding, the BLM has plans for 15 acquisition projects (five core and ten collaborative) in 9 States. These acquisitions will strengthen the BLM's efforts to preserve wildlife habitat and wilderness, conserve and protect cultural and historic resources, retain open space, and enhance public recreation opportunities in the western U.S. in perpetuity. The BLM will utilize innovative methods to acquire lands, including conservation easements, leveraged purchases, and the purchase of development rights where these methods meet management objectives and landowner needs. Planned acquisitions for 2016 are listed on the following page. The subsequent pages include maps of the acquisition projects and project descriptions.

The following lists of proposed land acquisition projects is the current set of land acquisition priorities that has been vetted and approved by the BLM and Departmental leadership to meet the high priority programmatic needs during fiscal year 2016.

### Blanca Wetlands Area of Critical Environmental Concern/ Special Recreation Management Area

State: Colorado <input type="text"/>		County: Alamosa	Congressional District: 3 <input type="text"/>	Priority: <input type="text"/>	
Location	Southern Colorado, approximately 17 miles northeast of Alamosa.		Acquired to Date		
Purpose	Acquire/restore critical playa wetland systems to provide essential wildlife habitat to multiple threatened and endangered species and offer important public recreational opportunities.		<b>Method</b>	<b>Acres<sup>1</sup></b>	<b>Cost</b>
			Purchase	1,115	\$1,404,600
			Exchange <sup>2</sup>	1,269	\$10,500
			Donation <sup>2</sup>	80	\$4,600
			Other	233	\$293,500
			Partners	0	\$0
Purchase Opportunities	The Nature Conservancy acquired these lands in 2004 as part of the creation of the Great Sand Dunes National Park & Preserve and the Baca National Wildlife Refuge. Owner is a highly-motivated willing seller.		Proposed for FY2016		
			Purchase	12,678	\$6,346,000
			<i>Pending Future Action</i>		
	Pending	160	\$80,000		
Partner(s)	The Nature Conservancy.				
Cooperator(s)	National Park Service, U.S. Fish and Wildlife Service, Bureau of Reclamation, Colorado Division of Wildlife, Ducks Unlimited, Wetlands Focus Area Committee, Intermountain West Joint Venture.				
Project Description	<p>Long ago, a network of playa lakes and marshes shimmered in the desert scrub of the San Luis Valley (SLV). The skies were blackened by thousands of birds drawn to these wetlands for breeding, resting, and foraging during their long migrations. During the past few decades surface water has become significantly over-appropriated as more and more wells have been drilled into the aquifers causing the lowering of the SLV's water table. The effects have now caused these wetlands to start disappearing at a rapid rate. State and federal agencies initiated wetland restoration efforts in the 1960's as bird populations were plummeting. A critical component of the restoration efforts was the development of the BLM's Blanca Wetlands Area (BWA). The newly-expanded Blanca Wetlands Area of Critical Environmental Concern covers over 124,000 acres, 10,000 acres of which are managed by the BLM as a wetlands network of playa lakes, ponds, marshes and wet meadows. The BLM and its partners have made great strides in preserving and managing the Blanca Wetlands landscape to provide rich and diverse habitats for wildlife and a haven for people.</p> <p>The Blanca Wetlands ACEC is an Important Bird Area in Colorado and a key site for the Intermountain West Joint Venture shorebird science team and a nationally significant wildlife resource area. The diverse wetlands found here provide important habitats for 13 threatened and endangered species and 160 species of water birds. The project would fulfill goals identified in the Integrated Activity Plan for Blanca Wetlands (1995) by purchasing over 12,000 acres of land bordering the northern boundary of the site. These acquisitions are imperative for connectivity of wetlands across the SLV and would essentially merge wetlands owned by BLM, State of Colorado, NPS, FWS, and TNC. This would also encourage management across jurisdictions to achieve broad scale resource objectives.</p>

### Rio Grande del Norte National Monument

State: New Mexico <input type="checkbox"/>		County: Taos		Congressional District: 3 <input type="checkbox"/>		Priority:	
Location	Northern New Mexico, approximately 30 miles northwest of Taos.			Acquired to Date			
Purpose	Acquire private inholdings within the Monument, preserve traditional uses, secure connectivity to the Rio Grande NWSR corridor, preserve avian and wildlife habitat, protect prehistoric human habitation sites, and improve recreation & tourism.			<b>Method</b>	<b>Acres<sup>1</sup></b>	<b>Cost</b>	
				Purchase	17,228	\$21,000,000	
				Exchange <sup>2</sup>	16,032	\$6,412,800	
				Donation <sup>2</sup>	0	\$0	
				Other	0	\$0	
Purchase Opportunities	Multiple parcels within the Monument face immediate threat of off-the-grid rural residential development. Landowners are interested in selling and third party partners are engaged.			Proposed for FY2016			
				Purchase	5,448	\$2,900,000	
				<i>Pending Future Action</i>			
			Pending	13,960	\$16,850,000		
Partner(s)	Rocky Mountain Elk Foundation, The Trust for Public Land.						
Cooperator(s)	New Mexico Department of Game and Fish (NMDGF), Rio Grande del Norte Coalition, New Mexico Wilderness Alliance, New Mexico Wildlife Federation, The Wilderness Society, Trout Unlimited, and Backcountry Hunters & Anglers.						
Project Description	<p>The 42,500-acre Rio Grande del Norte National Monument landscape is comprised of rugged, wide open plains at an average elevation of 7,000 feet, dotted by volcanic cones, and cut by steep canyons with rivers tucked away in their depths. The Rio Grande National Wild and Scenic River carves an 800-foot-deep gorge through layers of volcanic basalt flows and ash. Among the volcanic cones in the Monument, Ute Mountain is the highest, reaching 10,093 feet.</p> <p>Private inholdings within the Monument are vulnerable to increasing residential and "off grid" rural residential development and subdivision. Acquisition of inholdings would enhance BLM's ability to protect fragile cultural, biological and scenic resources within the Monument, secure and increase traditional and recreational access, and prevent fragmentation of a vital interstate wildlife migration corridor and crucial winter range. Cultural significance of the area dates back 14,000 years to the Pleistocene era, when native hunters first followed the massive migrating herds of Mammuthus primigenius (wooley mammoth) and Bison antiquus (mega bison), into the region. The Plateau is rife with remains of the earliest known human cultures in the hemisphere with petroglyphs, tipi rings, wickiup structures, arrow heads, and pottery shards scattered across the landscape. Continuing archaeological investigation has documented over 500 recorded sites. Several Native American tribes and descendants of Hispanic settlers continue to use these lands as important areas for hunting, native plant and fire-wood gathering, and grazing. Hunting, camping, wildlife viewing, fishing and renowned whitewater rafting contribute much-needed economic revenue to nearby rural communities. Access to the interior of the Monument and preservation of the rugged, wide-open landscape and vistas would be preserved through land acquisition.</p> <p>Acquisition would also protect habitat for multiple species, including Gunnison's Prairie dog, loggerhead shrike and burrowing owl, both BLM sensitive species. The New Mexico Department of Fish and Game identified this area as the most important winter range habitat for elk populations moving between Colorado and New Mexico. Up to 10,000 elk winter on the plateau each year.</p>						
O&M Cost	Estimated "start up" cost: <input type="text" value="\$5,000"/>		Estimated "annual" maintenance: <input type="text" value="\$10,000"/>				

<sup>1</sup> Includes fee and conservation easement interest  
<sup>2</sup> For donation and exchange "cost" = "value"

### North Platte River Special Recreation Management Area

State: Wyoming <input type="text"/>		County: Natrona		Congressional District: 1 <input type="text"/>		Priority:	
Location	Central Wyoming, up to 50 miles southwest of Casper.			Acquired to Date			
Purpose	Enhance public recreation opportunities, preserve riparian/wetland and endangered species habitat along the North Platte River, and conserve Greater Sage-grouse habitat.			<b>Method</b>	<b>Acres<sup>1</sup></b>	<b>Cost</b>	
				Purchase	1,063	\$6,996,000	
				Exchange <sup>2</sup>	0	\$0	
				Donation <sup>2</sup>	0	\$0	
				Other	0	\$0	
				Partners	706	\$890,000	
Purchase Opportunities	Multiple riverfront opportunities, facing threats from commercial and rural residential development and mining, are immediately available.			Proposed for FY2016			
				Purchase	154	\$1,310,000	
				<i>Pending Future Action</i>			
	Pending	36,620	\$40,420,000				
Partner(s)	The Conservation Fund.						
Cooperator(s)	Wyoming Game and Fish Department, City of Casper, Platte River Parkway Trust, Wyoming Fly Casters, North Platte Walleyes Unlimited.						
Project Description	<p>Weaving a fragile thread of green through the high plains of central Wyoming, the vegetative corridor hugging the banks of the North Platte River represents the rarest of Western ecosystems, only 1% of land in Wyoming constitutes riparian/wetland habitat. The 4,600-acre North Platte River Special Recreation Management Area (SRMA) includes a 45-mile segment of the North Platte, between Pathfinder National Wildlife Refuge (administered by the U.S. Fish and Wildlife Service) and the City of Casper. While the flow of the North Platte is regulated, the river remains lightly impacted by agriculture, mining, and rural residential subdivision. Native cottonwood stands along the river are critical to a wintering bald eagle population. The Oregon, California, Mormon Pioneer, and Pony Express National Historic Trails, diverging from and interpreted at Casper's National Historic Trails Interpretive Center were established along the natural contour of the North Platte River valley more than a century ago.</p> <p>An intermingled land ownership pattern stymies public access to and use of the river. Minutes away from Casper's 50,000 residents, local outdoor enthusiasts and area visitors have turned to the BLM to address their growing demand for river access. The popularity of the Platte River Parkway, Casper's highly successful "greenway" project initiated in 1982, and public fishing access easements purchased by the Wyoming Game and Fish Department along the North Platte are indicators of public use. The North Platte is regarded by the WGFD as a "Blue Ribbon/Class I" trout fishery.</p> <p>The project area overlaps 62,000 acres of Greater Sage-grouse core habitat amidst a vast, relatively untrammled landscape of short grass prairies and sagebrush steppe communities intermixed with mountain shrubs and bounded by riparian corridors. Uplifts along with sandstone hogbacks and cuestas add color and create visual diversity. The combination of these varied components is critical to the life cycle and long-term survival of the Greater sage-grouse.</p>						
O&M Cost	Estimated "start up" cost:		\$50,000	Estimated "annual" maintenance:		\$15,000	

<sup>1</sup> Includes fee and conservation easement interest  
<sup>2</sup> For donation and exchange "cost" = "value"

### Sandy River Area of Critical Environmental Concern Oregon National Historic Trail

State: Oregon	County: Clackamas, Multnomah	Congressional District: 3	Priority:
Location	Northwest Oregon, 20 miles southeast of Portland.	Acquired to Date	
Purpose	Preservation of the Sandy/Salmon River gorge and interwoven Oregon National Historic Trail corridor, providing for the protection of open space, scenic, recreation, fisheries and wildlife values. Improve public recreational access to the river corridor.	<b>Method</b>	<b>Acres<sup>1</sup></b>
Purchase Opportunities	Multiple properties facing immediate threat from commercial and rural residential development and subdivision, and degrading land use practices.	Purchase	3,150
		Exchange <sup>2</sup>	3,548
		Donation <sup>2</sup>	0
		Other	0
		Partners	1,500
		Proposed for FY2016	
		Purchase	20
		Pending Future Action	
		Pending	667
Partner(s)	Western Rivers Conservancy.		
Cooperator(s)	U.S. Forest Service, State of Oregon, Clackamas and Multnomah Counties, METRO (regional government body), Cities of Portland and Sandy, Portland General Electric (PGE), The Nature Conservancy, Northwest Steelheaders, Oregon Trout, Sand River Watershed.		
Project Description	<p>A breath-taking scenic corridor immediately east of metropolitan Portland, the Sandy and Salmon Rivers descend from the forested slopes of Mount Hood, harboring a rich diversity of animal and plant populations, within secluded riparian and wetland areas. Multiple threatened salmonid species, including Lower Columbia Chinook and Coho salmon and Steelhead use these turbulent waters for spawning and rearing their young before returning to the Pacific Ocean via the Columbia River. Old growth stands of Douglas fir contain prime habitat for the threatened northern spotted owl.</p> <p>The 29,000-acre Sandy River Area of Critical Environmental Concern (ACEC) project offers exceptional recreational opportunities for fishing, hiking, wildlife viewing, nature study, and non-motorized boating or floating. The project is easily accessible from the Portland metro area, the Northwest's second largest population center. Within the project area is the route of the historic Barlow Trail, the western segment of the Oregon National Scenic Trail. The project shares a common boundary with the Salmon-Huckleberry Wilderness, administered by the U.S. Forest Service.</p> <p>PGE recently completed removal of their Bull Run hydroelectric project, including dams on both the Sandy and Little Sandy Rivers. Dam removal has restored the free flowing character of the Sandy River. Numerous projects designed to improve public access and enhance and restore habitat for listed species have been undertaken by the BLM and its partners on and adjacent to recently acquired parcels within the project area.</p>		
O&M Cost	Estimated "start up" cost:	\$5,000	Estimated "annual" maintenance: \$1,500

<sup>1</sup> Includes fee and conservation easement interest  
<sup>2</sup> For donation and exchange "cost" = "value"

### Ironwood Forest National Monument

State: Arizona <input type="text"/>		County: Pima <input type="text"/>		Congressional District: 7 <input type="text"/>		Priority: <input type="text"/>	
Location	Southeast Arizona, approximately 25 miles northwest of Tucson.			Acquired to Date			
Purpose	To prevent rural residential development and subdivision, and mining within Ironwood Forest National Monument, and provide long-term protection of ecosystem, open space, species and watershed values.			<b>Method</b>	<b>Acres<sup>1</sup></b>	<b>Cost</b>	
				Purchase	358	\$737,000	
				Exchange <sup>2</sup>	41	\$24,500	
				Donation <sup>2</sup>	0	\$0	
				Other	0	\$0	
				Partners	0	\$0	
Purchase Opportunities	Inholding parcels are available from highly-motivated willing sellers. Acquisition of these parcels would consolidate land ownership and improve Monument management.			Proposed for FY2016			
				Purchase	602	\$1,000,000	
				<i>Pending Future Action</i>			
			Pending	4,789	\$12,283,000		
Partner(s)	Arizona Land and Water Trust.						
Cooperator(s)	Tohono O'odham Indian Nation, Pima County, Friends of Ironwood Forest.						
Project Description	<p>Taking its name from one of the longest living trees in the Arizona desert, the 129,000-acre Ironwood Forest National Monument is a true Sonoran Desert showcase. The Ironwood is a very long-lived tree, with some specimens estimated to be more than 800 years old. Ironwood is a keystone species because it provides a nursery environment of shade and protection that enables young seedlings of other species to become established despite the harsh desert climate, where night-time lows can exceed 105°F. Studies by the Arizona-Sonora Desert Museum have documented 560 plant species within the Monument. Resident birdwatchers have documented more than 80 species of migratory and non-migratory birds.</p> <p>Available parcels, located in the remote heart of the Monument, have immediate rural residential subdivision development potential, however they are still pristine tracts possessing natural resources that are characteristic of the Monument. The Monument's heart provides habitat to a small population of Nichol Turk's Head cactus, occurring in localized limestone-rich areas. The Nichol Turk's Head is a very slow-growing cactus. It was listed as endangered in 1976 and has an approved recovery plan.</p> <p>More than 200 Hohokam and Paleoindian archaeological sites dated between 600 and 1450 (including many petroglyphs) have been identified on adjacent Monument land, some are likely to occur on these tracts.</p> <p>The Silverbell acquisition would allow public access to the peak of Ragged Top Mountain, the Monument's crown jewel and most distinctive geologic feature. Acquisition would improve future access to Monument lands, increase recreational amenities, protect plant and animal habitat, and limit the rapidly encroaching rural residential development occurring in the area.</p>						
O&M Cost	Estimated "start up" cost: <input type="text" value="\$5,000"/>		Estimated "annual" maintenance: <input type="text" value="\$1,000"/>				

1 Includes fee and conservation easement interest  
2 For donation and exchange "cost" = "value"

### Lewis and Clark National Historic Trail

State: Idaho	County: Lemhi	Congressional District: 2	Priority:	
Location	Central Idaho, 8 miles north of Salmon.	Acquired to Date		
Purpose	Protect a portion of the Lewis and Clark National Historic Trail (LCNHT); special landscapes; scenic viewshed; historic and cultural resources; provide LCNHT access; ensures resiliency and connectivity of terrestrial and related ecosystems.	<b>Method</b>	<b>Acres<sup>1</sup></b>	
		<b>Cost</b>		
		Purchase	1,336	\$2,714,500
		Exchange <sup>2</sup>	0	\$0
		Donation <sup>2</sup>	42	\$141,500
		Other	0	\$0
Purchase Opportunities	Unique opportunity to purchase one property in fee and conserve an additional property with a conservation easement to protect and provide addition access to over four miles of the Lewis and Clark Trail.	Partners	0	\$0
		Proposed for FY2016		
		Purchase	437	\$740,000
		Pending Future Action		
		Pending	0	\$0
Partner(s)	The Nature Conservancy, Lemhi Regional Land Trust.			
Cooperator(s)	Idaho Department of Fish and Game, local County support, State of Idaho, local Trails Committee, Central Idaho Rangeland Committee, Heart of the Rockies Initiative, National Park Service.			
Project Description	<p>A portion of the Lewis and Clark National Historic Trail crosses a property that is being offered for sale in the Blackhawk subdivision. Acquiring these lots (totaling 20 acres) would provide public and recreational access to four miles the Trail and allow for Corps of Discovery interpretive opportunities to be expanded from the BLM's Discovery Hill to this area. Acquisition would also provide an emergency access route for the City of Salmon.</p> <p>Additionally the nearby Beaverhead Peaks Ranch is willing to sell a a conservation easement to enable the owners to continue traditional working ranch practices while conserving a portion of the Lewis and Clark National Historic Trail, 417 acres of important wildlife habitat, and tremendous scenic values.</p> <p>In 1805 the Corps of Discovery had reached the headwaters of the Missouri River, crossed the Lemhi Pass into the Lemhi valley and encountered the central Idaho mountain barrier to the west. Here they Sacagawea's people, the Shoshone, who offered tremendous assistance to the Corps. William Clark took a group of men to explore the opportunity to boat the Salmon River through the mountains to reach the Pacific Ocean. Clark had discovered what the Shoshone had told the Corp was true, that the Salmon River was impassable. Clark returned and rejoined with Lewis and the main Corps of Discovery party at what is now the City of Salmon. His band crossed the two properties twice.</p> <p>The Shoshone provided the Corps with horses and advised them of a long used Indian trail over what is now Lost Trail Pass to continue their efforts to find a route to the Pacific. Once again the Lewis and Clark expedition crossed the target properties using the ancient Indian trail. In places trail ruts formed by Indians dragging travois are still visible in the area.</p>			
O&M Cost	Estimated "start up" cost:	\$5,000	Estimated "annual" maintenance: \$500	

<sup>1</sup> Includes fee and conservation easement interest  
<sup>2</sup> For donation and exchange "cost" = "value"

### Sands Desert Habitat Management Area and the Teton River Wildlife Corridor

State: Idaho	County: Fremont, Teton	Congressional District: 2	Priority:
Location	Southeast Idaho, east, north and west of St. Anthony, extending into the Teton Basin.	Acquired to Date	
Purpose	Conserve significant big game migration corridors and crucial winter range, key year round sage and sharp-tail grouse habitat, tremendous hunting opportunities, and archaeological resources.	<b>Method</b>	<b>Acres<sup>1</sup></b>
Purchase Opportunities	Multiple willing land owners are seeking a conservation alternative for their properties to keep them as working ranches or secure in public ownership to ensure they will always make a significant wildlife contribution.	Purchase	2,037
		Exchange <sup>2</sup>	80
		Donation <sup>2</sup>	0
		Other	0
		Partners	23,654
			\$19,035,247
		Proposed for FY2016	
		Purchase	723
			\$3,500,000
		Pending Future Action	
		Pending	9,272
			\$7,700,000
Partner(s)	Teton Regional Land Trust, The Conservation Fund, Rocky Mountain Elk Foundation.		
Cooperator(s)	Idaho Department of Fish and Game (IDFG), Henrys Fork Legacy Project (HFLP), Mule Deer Foundation, Doris Duke Charitable Foundation, Natural Resource Conservation Service, Caribou-Targhee National Forest, Heart of the Rockies Initiative.		
Project Description	<p>The Sands Desert Habitat Management Area and Teton River Wildlife Corridor encompass some of the best remaining sagebrush steppe habitat, riparian, and fish habitat in the state of Idaho. This high quality habitat supports healthy populations of two species of national importance: the greater sage-grouse (core habitat) and the Columbian sharp-tailed grouse. For Idahoans though, it is best known for its large mammal populations; more than 4,000 elk, 3,000 mule deer and 400 moose winter on the Sands and Teton River public rangelands, the IDFG's 35,000 acre Sand Creek Wildlife Management Area (WMA), and the adjacent private property. Much of the wildlife that people attribute to Yellowstone National Park and the surrounding National Forest lands, leave those public lands in the winter to find refuge from heavy snows at lower elevations. On the west side of Yellowstone the best winter refuge on the Sands Desert and Teton River Corridor. While IDFG's WMA is not small, the lands that have been cobbled together to date are somewhat disconnected and do not encompass some of the best habitat. The value of this habitat was recognized by in the Idaho Fish and Game Comprehensive Wildlife Conservation Strategy, but few opportunities have come about to match willing land-owners with funds for habitat conservation.</p> <p>These substantial fish and game resources also support outstanding hunting and fishing opportunities for both Idahoans and nonresidents. A high profile OHV program on the St. Anthony Sand Dunes which also supports the local rural economies. Additionally the Shoshone-Bannock Tribes rely heavily on the areas to continue their aboriginal hunting and gathering Treaty rights.</p> <p>Through a rigorous prioritization process, the HFLP identified a dozen private parcels near the Sand Creek WMA and Teton River that would dramatically improve the protection offered by the WMA as well as existing conserved private properties and would permanently protect migration corridors land connectivity habitat. If successful, this funding would ensure the persistence of the large mammals that need the WMA and Teton River in the winter and two grouse species which can be found there year-round.</p>		
O&M Cost	Estimated "start up" cost:	\$5,000	Estimated "annual" maintenance: \$1,000

<sup>1</sup> Includes fee and conservation easement interest  
<sup>2</sup> For donation and exchange "cost" = "value"

### Thousand Springs Area of Critical Environmental Concern

State: Idaho	County: Custer	Congressional District: 2	Priority:	
Location	Central Idaho, approximately 100 miles west of Idaho Falls.	Acquired to Date		
Purpose	Conservation & enhancement of one of Idaho's significant wildlife corridors & habitat areas lying at the base of the state's highest mountain range. Crucial wetland adjacent to sage-brush steppe habitat.	<b>Method</b>	<b>Acres<sup>1</sup></b>	
Purchase Opportunities	Private property within the area is for sale and has been subdivided threatening migratory birds, sensitive species habitat including year-round sage-grouse use, visual resources, cultural sites, & recreation.	Purchase	0	
Partner(s)	Lemhi Regional Land Trust, The Conservation Fund.	Exchange <sup>2</sup>	0	
Cooperator(s)	Idaho Department of Fish and Game (IDFG), The Nature Conservancy, Ducks Unlimited, Rocky Mountain Elk Foundation, Idaho State Historic Preservation Office, Heart of the Rockies Initiative.	Donation <sup>2</sup>	0	
Project Description	<p>The Thousand Springs/Chilly Slough area is one of the few remaining examples of natural, high desert, spring-fed wetlands. Winter snows melt, gather along a range-front fault and feed thousands of springs to this area. It is the largest wetland in east-central Idaho and is managed jointly by the BLM and the Idaho Fish and Game.</p> <p>Acquisition of the private parcels are crucial because it encompass the headwaters of the Thousand Springs/Chilly Slough wetlands. Land administered by BLM within the Thousand Springs/Chilly Slough wetlands is designated an ACEC and is valued for its diversity of wildlife that use it. The Zollinger parcel falls within the boundary delineated in the BLM Thousand Springs/Chilly Slough Habitat Management Plan. Acquisition will assure protection of this wildlife migration corridor and year-round habitat. Currently, the Chilly Slough Wetland Conservation Area protects almost 2,000 acres (BLM has acquired 1,028 acres and IDFG has acquired 918 acres) in public ownership. The 1999 BLM Resource Management Plan for this area allows for the creation of a wetlands management area of approximately 4,400 acres.</p> <p>One hundred and seventy three wildlife species are known to use Thousand Springs/Chilly Slough wetlands with 113 of those being birds. These wetlands hold a high importance for migratory birds for a refueling spot during their annual migration. The riparian edge and adjacent sage-brush steppe habitat have shown to be important to sage-grouse throughout the year. Numerous historic and prehistoric archeological sites are present in and around the wetlands, and it is highly probable that other prehistoric and historic sites are located within these parcels; one prehistoric site is already known to exist on these private lands proposed for purchase. The Shoshone-Bannock Tribes have expressed interest in using this area for the practice of treaty-reserved rights. Recreational opportunities would include bird watching, hiking, fishing, canoeing, and historical education. Acquisition of this land through fee purchase would help to provide additional access to the wetlands, as well as, provide connectivity between publicly managed lands for wildlife conservation.</p>	Other	1,028

Partner(s)	The Conservation Fund, The Nature Conservancy, Wood River Land Trust.		
Cooperator(s)	Pioneer Alliance, Idaho Department of Fish and Game, National Park Service, Natural Resources Conservation Service, Central Idaho Rangeland Committee, Heart of the Rockies Initiative.		
Project Description	<p>Craters of the Moon National Monument and Preserve (CRMO) protects 750,100 acres of National Park Service and BLM land in South Central Idaho and the southwestern corner of the High Divide Conservation Collaborative. CRMO is a member of the Pioneers Alliance, a coalition of ranchers, farmers, local residents, conservationists, agency officials and elected officials working together to accomplish common goals in Blaine and Butte counties. Conservation easements have been negotiated in both counties to protect the open spaces; the abundant wildlife; the access to the mountains, foothills, and desert; the agricultural way of life; and the small communities – and to build an economically, environmentally and socially sustainable future.</p> <p>The Pioneers Foothills encompasses intact shrub habitat and provides a migration corridor between the Pioneer Mountains, Sawtooth National Forest and CRMO. Pronghorn antelope migrate seasonally through the north end of CRMO from the Pioneer Mountains to the Birch Creek area approximately 100 miles each way. The project area is core habitat for greater sage-grouse. Over 40 greater sage-grouse leks have been monitored in the CRMO. A portion of the Oregon National Historic Trial (i.e., Jeffrey–Goodale Cutoff) is also within the project area. The Goodale's Cutoff of the Oregon Trail is a 230-mile spur headed north from Fort Hall toward Big Southern Butte, and then through the northern part of Craters of the Moon National Monument.</p> <p>The target properties are located in Blaine County near the community of Carey, Idaho, and have tremendous potential for rural residential development. In the last decade, many farms and ranches in the vicinity have been subdivided and developed. Recreation use within the areas is in high demand due to the magnitude of proposed development of the surrounding areas; thus changing and/or increasing the demand, type and intensity of recreational use. CRMO attracted 198,545 visitors during calendar year 2011, with visitors spending an estimated \$6,821,000, resulting in 81 jobs and a \$2,940,000 value added to local communities.</p>

**Panoche-Coalinga Area of Critical Environmental Concern**

State: California <input type="text"/>		County: Fresno, San Benito		Congressional District: 20 <input type="text"/>		Priority: <input type="text"/>	
Location	Central California, approximately 70 miles south of San Jose.			Acquired to Date			
Purpose	Consolidate disbursed ownerships of public, state and private lands to provide landscape level connectivity for wildlife and the recovery of threatened and endangered (T&E) species.			<b>Method</b>	<b>Acres<sup>1</sup></b>	<b>Cost</b>	
				Purchase	3,827	\$2,316,000	
				Exchange <sup>2</sup>	39,600	\$15,900,000	
				Donation <sup>2</sup>	40	\$28,000	
				Other	0	\$0	
				Partners	6,388	\$3,434,000	
Purchase Opportunities	Fee and conservation easement acquisition opportunities of multiple large acreage ranch properties threatened with commercial, industrial and residential development, mining, visual intrusion and loss of T&E species habitat.			Proposed for FY2016			
				Purchase	1,500	\$900,000	
				<i>Pending Future Action</i>			
	Pending	47,740	\$26,800,000				
Partner(s)	The Nature Conservancy.						
Cooperator(s)	National Park Service (NPS), U.S. Fish and Wildlife Service (USFWS), Bureau of Reclamation (BOR), California Department of Fish and Game, Westside Resource Conservation District, Rocky Mountain Elk Foundation, San Benito Resource Conservation District.						
Project Description	<p>The Panoche-Coalinga Area of Critical Environmental Concern (ACEC) lies along the western fringe of the northern San Joaquin Valley intermingled with overlapping resource designations including the Joaquin Rocks and Serpentine ACEC's, and the San Benito Mountain and Monvero Dunes Research Natural Areas. Within easy reach of the busy Interstate 5 corridor, these often-overlooked designations collectively conserve approximately 180,000 acres within a 300,000-acre mountainous setting. Buffered from urban influences these converging mountain ranges create a landscape of striking diversity in topography, soil type, and plant communities, presenting a unique opportunity for landscape conservation on a large scale. With most of the high country already in public ownership, a handful of strategic valley acquisitions would transform this patchwork of protected lands and secure it as one of the most productive biologic landscapes in California.</p> <p>The primary goal of the project is to implement the Recovery Plan for Upland Species of the San Joaquin Valley (USRP). Implementation would accomplish multiple recovery tasks listed in the plan, including endangered species connectivity and the potential to de-list several species, including the San Joaquin kit fox, blunt-nosed leopard lizard, and giant kangaroo rat, all Federally listed species. All three species occupy properties that have been identified by the U.S. Fish and Wildlife's Endangered Species Recovery Program as crucial stepping-stones for maintaining connectivity between the Panoche Valley core populations and these species to the south.</p> <p>Secondary project goals would protect the headwaters of several ecologically important drainages, conserve world-class paleontological resources, expand the range of an existing elk herd, improve public access and recreation, and preserve several pristine valleys that support core T&amp;E recovery populations identified in the USRP. The BOR and USFWS have committed \$4M over the next five years in support of land acquisitions to support T&amp;E recovery.</p>						
O&M Cost	Estimated "start up" cost: <input type="text" value="\$50,000"/>		Estimated "annual" maintenance: <input type="text" value="\$10,000"/>

### Carrizo Plain National Monument

State: California	County: Kern, San Luis Obispo	Congressional District: 22	Priority:
Location	Central California, approximately 60 miles west of Bakersfield.	Acquired to Date	
Purpose	Acquire private inholdings within the Carrizo Plain National Monument to protect outstanding biological and cultural resource values and consolidate the landscape.	<b>Method</b>	<b>Acres<sup>1</sup></b>
Purchase Opportunities	Multiple properties facing immediate threat from commercial, industrial, rural residential and suburban development, and unregulated OHV use.	Purchase	95,040
		Exchange <sup>2</sup>	20,376
		Donation <sup>2</sup>	5,567
		Other	0
		Partners	11,400
		Proposed for FY2016	
		Purchase	240
		Pending Future Action	
		Pending	1,614
Partner(s)	Resources Legacy Fund Foundation, Sequoia Rivers Land Trust.		
Cooperator(s)	Bureau of Reclamation, U.S. Fish and Wildlife Service, California Department of Fish and Game, Friends of Carrizo Plain, Southern Sierra Archeological Society, Carrizo Plain Native American Advisory Committee.		
Project Description	<p>The Carrizo Plain National Monument is a majestic 250,000-acre grassland and scenic mountainous preserve that contains the last remaining undeveloped remnant of the San Joaquin Valley ecosystem. As a result, it provides critical contiguous habitat for one of the largest assemblages of threatened and endangered species surviving on any public lands in the United States, including the blunt-nosed leopard lizard, San Joaquin kit fox, giant kangaroo rat, Kern primrose sphinx moth, longhorn fairy shrimp, vernal pool fairy shrimp, California jewelflower, San Joaquin wooly threads, and the San Joaquin antelope squirrel.</p> <p>Within the vast expanse of the Carrizo Plain lies Painted Rock, an important ceremonial site of the Chumash that rises majestically from the surrounding grassland. In addition, the Monument contains other world-class archaeological sites, which are part of a current nomination as a National Historic Landmark.</p> <p>Soda Lake, a glistening bed of white salt in the dry summer, and the largest alkali wetland remaining in Southern California, provides important habitat for migratory birds during the winter. Those interested in geology can see one of the most spectacular sections of the 800-mile long San Andreas Fault with its complex corrugated topography along the edge of the Plain.</p> <p>The Monument's diversity and proximity to over 20 million people living in Southern and Central California attracts over 75,000 visitors annually who come to enjoy a variety of recreational activities. Those stopping at the Goodwin Education Center or taking guided tours to Painted Rock or the San Andreas Fault, can share in the rich history of the Carrizo Plain and learn about its unique plant and animal life.</p>

Purpose	Enhance public access to an extensive recreational trail network and strengthen aquatic and terrestrial habitat connectivity to and from Meadowood Special Recreation Management Area (SRMA) from neighboring conserved lands.																																			
Purchase Opportunities	Acquisition of these pivotal parcels from motivated willing sellers would consolidate resource management. The properties are potentially threatened with deforestation, rural residential development and other nonconforming uses.																																			
Partner(s)	Northern Virginia Conservation Trust.																																			
Cooperator(s)	U.S. Fish and Wildlife Service, Virginia Department of Conservation and Recreation, Northern Virginia Regional Park Authority, Fairfax County Department of Parks and Recreation, Chesapeake Conservancy, Audubon Society, Gunston Hall, Hands on the Land, Gunston Elementary School.																																			
Project Description	<p>Established in 2001 and managed by the BLM-Eastern States Office, the 802-acre Meadowood SRMA is a key component of the parks, refuges, and other preserves on the Mason Neck Peninsula that have been protected from encroaching urban development radiating south from metropolitan Washington, D.C. The landscape is a mosaic of gently sloping open meadows, mature hardwood forests, freshwater ponds, creeks, streams, and riparian wetlands.</p> <p>Two national trail segments pass through Meadowood SRMA, the Potomac Heritage National Scenic Trail and the Washington-Rochambeau Revolutionary Route National Historic Trail. These national trail segments help make up Meadowood's 15-mile, multiple-use trail system, which provides opportunities for hiking, running, mountain biking, and horseback riding. One universally accessible trail is incorporated within the trail system. The proposed acquisitions would permit BLM to significantly expand and enhance the existing trail system, conserve and restore strategic wetland and buffer areas and establish a defined boundary along Gunston Road. Additional day-use dispersed recreational activities at Meadowood include wildlife viewing, fishing, seasonal hunting, nature photography, geocaching, environmental education, and interpretation. The SRMA attracts over 22,000 annual recreational visitors and reaches over 700 area youth through a variety of educational and recreational programs including Hands on the Land and Take it Outside.</p> <p>The diverse Meadowood habitat supports a great variety of wildlife, including white-tailed deer, red fox, coyote, beaver, raccoons, hawks, eagles, reptiles, and amphibians. Home to 30 species of migratory songbirds, the SRMA lies within the National Audubon Society's Lower Potomac River Important Bird Area. Meadowood contains some of the best mature hardwood forest on the Mason Neck peninsula as well as less mature woodlands. Woody plants common to the woodlands, forests and forest edges at Meadowood include red and white oak, beech, sweet gum, Virginia pine, persimmon and paw paws. The trails at Meadowood pass through a wide variety of terrain and vegetation types, providing visitors with constantly changing seasonal experiences.</p>

### Nanjemoy National Resource Management Area

State: Maryland	County: Charles	Congressional District: 5	Priority:	
Location	Southern Maryland, approximately 45 miles south of Washington, D.C.	Acquired to Date		
Purpose	Provide habitat connectivity and improve public access between State of Maryland (MD) conservation areas and BLM's Douglas Point Special Recreation Management Area (SRMA), all within the Nanjemoy National Resource Management Area (NRMA).	<b>Method</b>	<b>Acres<sup>1</sup></b>	
Purchase Opportunities	Acquisition of multiple parcels from willing sellers would consolidate shared BLM/State of Maryland resource management. The properties are potentially threatened with mineral and rural residential development and other nonconforming uses.	Purchase	548	
Partner(s)	The Nature Conservancy.	Exchange <sup>2</sup>	0	
Cooperator(s)	Maryland Department of Natural Resources (DNR), Charles County, Piscataway-Conoy tribe, Chesapeake Conservancy.	Donation <sup>2</sup>	0	
Project Description	<p>Situated only one hour from Washington, D.C. on the tidal, lower Potomac River, the Nanjemoy Peninsula is one of the most ecologically and culturally significant landscapes remaining in the State of Maryland. Migratory waterfowl and wading birds find shelter and abound along ten miles of undisturbed shoreline, and an extensive network of wetlands and forests harbor some of Maryland's finest examples of rare and endangered plants and animals. Nanjemoy's outstanding natural attributes are equally matched by its archeological resources and history - early Native American sites in the region offer a rare insight into indigenous cultures prior to European settlement, the site of a 25,000-troop Civil War encampment and dozens of World War I-era sunken ship remains in Mallovs Bay. Two water-based national trails on the Potomac River pass to the east of Nanjemoy NRMA, the Captain John Smith Chesapeake National Historical Trail and the Star-Spangled Banner National Historic Trail. A two-mile segment of the Potomac Heritage National Scenic Trail loops through the area. Limiting development within the Nanjemoy NRMA will preserve the historic Potomac River viewshed associated with these trails.</p> <p>The State of Maryland manages several conservation areas within the Nanjemoy Peninsula, including Nanjemoy NRMA, Myrtle Grove Wildlife Management Area, Doncaster State Forest and Purse State Park. The BLM contributes to the Nanjemoy NRMA landscape through two "anchors", Douglas Point SRMA and Maryland Point.</p> <p>In September 2005, the State of Maryland DNR and the BLM approved a long-term land management plan for the Nanjemoy NRMA that provides guidance for the sustainable protection, use and future conservation of additional lands. The BLM and Maryland DNR are working together to establish habitat linkages between these conserved areas and the Potomac River, to enhance wildlife species viability, and protect cultural resources and watershed values.</p>	Other	24

Partner(s)	The Conservation Fund, The Pacific Forest Trust.						
Cooperator(s)	The Wilderness Society, Rocky Mountain Elk Foundation, Pacific Crest Trail Association, Soda Mountain Wilderness Council, Friends of the Cascade-Siskiyou National Monument, Southern Oregon Lands Conservancy.						
Project Description	<p>Fir forests, oak groves, wildflower meadows and steep canyons make the 85,105-acre Cascade-Siskiyou National Monument (CSNM) an ecological wonder, with biological diversity unmatched in the Cascade Range. A tremendous variety of plants and animals make homes amidst the Monument's towering forests, sunlit groves, wildflower-strewn meadows, and steep canyons. The Monument is a bird sanctuary, with more than 200 species identified, including the Northern Spotted Owl, the Great Gray Owl, the Peregrine Falcon and the Willow Flycatcher.</p> <p>The properties proposed for acquisition include a mix of Douglas-fir, ponderosa pine, other conifers and oak species. They also contain alpine meadows supporting wildflowers including the rare Greene's Mariposa Lily. The parcels are bordered by BLM-identified Old Growth Emphasis and Diversity Emphasis Areas including Soda Mountain Wilderness, and provide important connectivity within the Monument's ecosystem. Several parcels make up the "land bridge" between the mountain systems and the Eco-regions. Multiple properties include cold-water springs containing rare and endemic snails. The CSNM provides habitat for three endemic bureau sensitive fish species: Jenny Creek suckers, the speckled dace and a long-isolated stock of redband trout. The lands support populations of white-headed woodpecker, western pond turtle and beaver.</p> <p>Several tracts include, abut, or are within the viewshed of a popular section of the 2,638-mile Pacific Crest National Scenic Trail (NST). The Pacific Crest NST acts as the "gateway" to the Monument from Interstate 5.</p>

### Continental Divide National Scenic Trail

State: New Mexico <input type="checkbox"/>		County: Catron	Congressional District: 2 <input type="checkbox"/>	Priority:	
Location	East central New Mexico, approximately 50 miles south of Grants.		Acquired to Date		
Purpose	Provide permanent route for the Continental Divide NST, replacing a temporary highway routing. Protect the Alamocita Creek landscape and improve public access to Cibola National Forest.		<b>Method</b>	<b>Acres<sup>1</sup></b>	<b>Cost</b>
			Purchase	0	\$0
			Exchange <sup>2</sup>	0	\$0
			Donation <sup>2</sup>	0	\$0
			Other	0	\$0
			Partners	0	\$0
Purchase Opportunities	Parcel faces threat from rural residential subdivision development. Currently available from a highly-motivated willing seller.		Proposed for FY2016		
			Purchase	5,227	\$2,300,000
			<i>Pending Future Action</i>		
		Pending	670	\$545,000	
Partner(s)	Rocky Mountain Elk Foundation, The Trust for Public Land.				
Cooperator(s)	U.S. Forest Service, New Mexico State Lands Office, New Mexico State Parks, New Mexico Department of Game and Fish, Catron County, Pueblo of Acoma, Continental Divide Trail Coalition, Backcountry Horsemen.				
Project Description	<p>The Continental Divide National Scenic Trail (CDNST), one of the crown jewels of the National Trails System, runs 3,100 miles between Canada and Mexico. It follows the Continental Divide of the Americas along the Rocky Mountains and traverses five U.S. states — Montana, Idaho, Wyoming, Colorado, and New Mexico. The trail is a combination of dedicated trails and small roads and is considered 70% complete. Portions designated as incomplete must be traveled by roadwalking on dirt or paved roads.</p> <p>Almost complete in New Mexico, the proposed acquisition would nearly close an existing gap and eliminate a 52-mile temporary route along state highway shoulders. The existing highway routing presents significant safety concerns and is inconsistent with the nature and purpose of the CDNST "to provide for a high-quality scenic, primitive hiking and horseback riding opportunity and to conserve natural, historic, and cultural resources along the CDNST corridor". The proposed rerouting is especially scenic and within the mostly undeveloped Alamocita Creek landscape. The proposed acquisition would offer a rare source of perennial water for CDNST users and cottonwood galleries providing shaded camping opportunities.</p> <p>The Alamocita Creek landscape would improve public access (especially for hunting) to the Cibola National Forest, an area with a significant elk population. The parcel contains eight miles of Alamocita Creek, providing riparian habitat for many species of wildlife. The area is known for cultural sites (including those highlighting early contact between native Americans and Europeans).</p> <p>Improving the tread and connectivity of the CDNST supports multiple America's Great Outdoors goals, including expanding access to public lands, providing high quality trail opportunities and creating youth oriented job and volunteer opportunities for underserved communities.</p>

Cooperator(s)	Resources Legacy Fund Foundation, The Wilderness Society, The California Wilderness Coalition, The Nature Conservancy, The Sierra Club, The Wildlands Conservancy, California State Lands Commission, California Native Plants Society, Pacific Crest Trail Association.		
Project Description	<p>There are 88 designated Wilderness areas encompassing over 3.9 million acres of public land in California. The first 69 Wilderness areas were designated in southern California with the passage of the California Desert Protection Act of 1994. Subsequently the Otay Mountain Wilderness Act, Big Sur Wilderness and Conservation Act of 2002, Northern California Coastal Wild Heritage Act of 2006, and most recently the Omnibus Public Lands Management Act of 2009 designated 19 additional Wilderness areas on BLM lands in California. These Wilderness areas stretch from the north coast of California to the peaks of the Sierra Nevada to lands along the Mexican border.</p> <p>Over 37 million people are now living in California and these Wilderness areas offer places of solitude where people can experience freedom from our fast-paced industrialized society. They are places where people can renew the human spirit through association with the natural world and offer a respite from the pressure of an ever increasing urban lifestyle.</p> <p>These Wilderness areas provide important habitat to a wide variety of animal and plant species, many threatened and endangered, and some Federally-listed species. There are six Wilderness areas that are transected by the 2,638-mile Pacific Crest National Scenic Trail, as well as seven Wilderness areas that are located adjacent to the Juan Bautista de Anza and Old Spanish National Historic Trails.</p>
