

Onshore Oil & Gas

The background of the slide features a silhouette of an oil drilling rig against a bright, hazy sky at sunset or sunrise. The rig's derrick is the central vertical element, with various structural beams and platforms visible. The sky transitions from a pale yellow near the horizon to a light blue at the top.

- In FY 2017 oil production on Federal and Indian lands was about 869 million bbl, accounting for 23% of total U.S. production, a 5% increase compared to FY 2016.
- About 3 tcf of natural gas was produced on Federal and Indian land in FY 2017. This accounted for 9% of total U.S. production in FY 2017

Offshore Oil & Gas

The background of the slide features a large offshore oil rig in the middle of the ocean. The rig is a complex structure with a tall derrick and various platforms. The water is a deep blue-grey color, and the sky is a pale, overcast grey. The rig is positioned in the upper half of the frame, with its legs extending down towards the water's surface.

- Offshore Federal production in FY 2017 reached 629 million barrels of oil and 1.18 trillion cubic feet of gas, almost all of which was produced in the Gulf of Mexico. This accounted for about 19% of all domestic oil production and 4% of domestic natural gas production.
- Oil production from the Federal Outer Continental Shelf (OCS) increased 8% in FY 2017 compared to FY 2016.

Coal

An aerial photograph of a large-scale open-pit coal mine. The mine is characterized by deep, terraced levels of earth and rock, with winding roads and tracks. In the foreground, a large yellow haul truck is visible, carrying a load of coal. The background shows the vast expanse of the mine, extending towards the horizon under a clear sky.

- In FY 2017 Coal production on Federal and Indian lands was 347 million short tons.
- This accounts for an estimated 44% of total U.S. production that year.

Renewables

- Currently, 5% of total producing utility-scale wind energy capacity in the United States come from facilities located on public lands. As of March 2018, there were 35 BLM-approved wind energy projects on public lands with 3,284 megawatts of total installed capacity, enough to power 1 million homes.
- As of March 2018, BLM has approved 25 solar projects, totaling 6,319 megawatts of installed capacity, enough energy to power roughly 2 million homes
